We hope that every breeder of Holstein cattle in Eastern Pennsylvania will make an effort to attend the meeting in Wilkes-Barre.

HOWARD C. REYNOLDS.

Rider Goes With Holstein-Friesian Association

Professor William H. Rider, at the head of the animal husbandry and dairying department of Syracuse (N. Y.) University since the year 1915, has accepted the appointment as director of the extension service of the Holstein-Friesian Associaton of America.

Professor Rider has had experience in practical dairying in the middle west in addition to advanced courses in the Michigan Agricultural College and the University of Wisconsin. He spent the entire summer of the year 1913 touring Europe for the purpose of studying the animal husbandry and dairying interests. Professor Rider is secretary of the Onondaga Farm Bureau and Master of the Syracuse Grange.

Rubber Footwear at the "Front"
In the first line trenches, where the need is greatest, rubber footwear is helping to make life more livable for the doughboy
Men in the trenches are being supplied before civilians at home. This means limited supplies for outdoor workers.
Our customers, we are confident, will cheerfully bear with this situation. We regret our inability at present to meet every demand for "U. S. Protected" footwear.
Until U. S. Rubber Footwear is again available in large quantities, we ask patrons to remember the name and look for the "U. S. Seal" on every pair.
United States Rubber Company
New York

A Better Way of Sealing Preserves, etc.
In putting up preserves, catsups, chow-chow, chili-sauce, berries, Indian Relish, etc., don't follow the troublesome paraffine wax method of closure.
The better and easier way is to use a MIDGET CROWNER and seal your bottles (up to 14 ins. in height and 4 ins. in diameter) with air tight Crowns (3 sizes).
In storing condiments of all kinds for future use you will find this the safest method of sealing.
Write for full particulars.
THE CROWN CORK AND SEAL COMPANY,
Baltimore, U. S. A.

Grinds a Wagon Load for 15 cents
In these days of high priced gasoline, economy in grinding is of the utmost importance. Do not waste your time and money grinding feed with an out of date buhr mill. Cut your grinding bills in half and put money in your pocket by using one of the
HOWELL Roller Feed Mills
that will grind twice as fast with the same power as the best buhr mill made. Have corrugated steel rollers, same as used in modern flour mills. No parts to wear out. Built to last a lifetime. Fully guaranteed. The only mill that gets the wild oats. Made in 15 sizes—any capacity—a size for any engine.
FREE—Complete catalog and the Famous Roller Mill Puzzle. Write for them today.
R. R. HOWELL CO., 4 Malcolm Ave. S.E., Minneapolis, Minn.

A strictly high grade wood panel dairy wagon. Ask for free catalog. Terms to suit. Pioneers in dairy wagon building with Sanitary Bottled Milk equipment. Also builders of metal panel enclosed body wagons. No check, split, warp or crack.
DE KALB WAGON COMPANY, P. O. Box E., De Kalb, Ill.

TIRES ¼ LESS
There's a way to obtain high-grade tires at manufacturers' prices. Write and we'll tell you. Freshly made tires, every one
GUARANTEED 6000 MILES
(No seconds.) All sizes, non-skid or plain. Shipped prepaid on approval. This saving on guaranteed quality will open your eyes. State size tires used.
SERVICE AUTO EQUIPMENT CO.
964 Traders Bldg., Kansas City, Mo.

EDITORIAL COMMENT

DR. Cyril G. Hopkins has accepted a call to head the agricultural section of the Red Cross Commission to Greece. He has been granted a leave of absence from the Illinois College of Agriculture for one year. His plans are now to return to the United States by October 1st, 1919.

We are not fully advised regarding his duties in Greece under the direction of the Red Cross, but we assume that he is engaged to interpret the needs of the soil of that country. It is recognized by every thinking nation that at the close of this war, there is going to be an unlimited demand for agricultural products, for the food reserves of the whole world are low. It will require intelligent agricultural practice to restore the proper food reserves. We know of no one more capable of giving sound agricultural advice than Dr. Hopkins who has had many years of scientific and practical experience in dealing with the soil problems of not only Illinois, but of the East and South.

WE are sure the dairy farmers and breeders of dairy cattle will welcome the appointment of B. H. Rawl as Assistant Chief of the Bureau of Animal Industry. The law requires that the chief of the Bureau shall be a veterinarian. The present chief is J. R. Mohler, who is not only a veterinarian but a trained scientist and a capable executive. Mr. Rawl brings to the executive department of the Bureau of Animal Industry, information regarding live stock which is highly essential to the proper conduct of that office. To discharge its duties, it requires not only a thorough understanding of the principles of veterinary science and all its allied sciences, but also an understanding of the principles and practices employed in the successful rearing of live stock. A person may be a well qualified veterinarian, but lack woefully in knowledge pertaining to the principles and practices of live stock farming.

This department in the past has been severely criticised because it did not seem to be properly balanced, that the veterinarians were predominating, and that there was a lack of live stock understanding by those directing the affairs of the Bureau. The adjustments which Mr. Rawl made between the Bureau and the National Dairy Show cattle, which carried a quarantine through the foot and mouth disease in Chicago in 1914, recommend him highly for his new position. He has proven that he has an understanding of the principles and practices which govern the handling of our live stock interests. We know that his appointment will be well received by our live stock interests and will have their hearty support.

TIMOTHY HAY

The feeding value of timothy hay, as well as other hay, depends upon the time it was cut and how well it was cured. Timothy hay at best is not a high class feed for dairy cows but considerable of it is used by the dairymen of the country because clover fails and in order to be sure of a hay crop, some timothy is sown with the clover.

Timothy hay contains a low percentage of protein but the protein content varies a great deal, depending upon the period of cutting. When cut before bloom, it contains 4.7 per cent digestible protein; cut early to full bloom, 3.6 per cent digestible protein; cut at late bloom to early seed, 2.4 per cent digestible protein. In other words, timothy cut before bloom contains nearly twice as much protein per hundred pounds as when cut at late bloom to early seed.

Permitting any of the grasses, which are used for hay, to ripen, tends to lock up their nutrients firmly. Oats cut when in the milk stage make a very acceptable hay but oat straw is rather a poor feed. Cutting timothy before bloom will secure a higher percentage of digestible protein but it is doubtful whether it would pay to cut it quite so early. Early to full bloom will secure the largest yield of digestible nutrients from an acre.

RATHER STRANGE ADVICE

Kimball's Dairy Farmer announces with quite a flourish that it is proud of advising the farmers against getting rid of cows that have proved unprofitable producers at the pail. Its excuse for this strange advice is that there is going to be a great scarcity of butter. That may be, but is it not asking too much of the farmer that he keep on with unprofitable cows in order to help prevent that scarcity?

The great economic fact is, that the low price of butter for years was caused by so great a number of farmers keeping unprofitable cows. Their product loaded down the market to the enormous benefit of the consumer, but to the great loss of the producer. Every man is in duty bound to look out for himself to start with. He is supposed to know what he is about. He is supposed to have business sense enough not to keep an unprofitable cow. He is supposed to have the good sense to institute ways and means to find out what his cows are actually doing. All this he owes to himself at the beginning and the public has no right to ask that he feed it with butter that is costing him more than he gets because he keeps a class of cows that cannot produce enough to pay their keep and give him a little profit besides.

VELVET BEAN MEAL OR FEED

Elsewhere in this issue will be found a communication regarding velvet bean meal. This feed is made of velvet beans and pods ground together. It seems to us it would be better to call this velvet bean feed and then when the beans are ground alone, to call the product velvet bean meal. Following this method of naming these products would be in keeping with the way cottonseed products are named; for instance, when cottonseed hulls are mixed with cottonseed meal, it is called cottonseed feed; without the cottonseed hulls, the ground seeds. after the oil has been removed, is called cottonseed meal.

We are looking forward to the time when velvet beans ground without the pods will be an important feed for supplementing home-grown grain rich in carbohydrates. The feeder will buy the ground beans for increasing the protein content of his ration and there may be instances when he will care for the ground pods and beans.

These products are now finding their way on the market and we suggest that one be called velvet bean meal when the beans are ground without the pods, and when ground with the pods be called velvet bean feed.

BEST FARMERS IN THE WORLD

"The best farmers in the world." How often have we heard this statement made with reference to the farmers of some European country where the production per acre exceeds that in the United States. And how effectively does the American farmer refute it! He has not been forced to compete in intensive cultivation except in a few sections where he has acquitted himself most satisfactorily. It is the "per man" basis of calculation that counts in this country—not the "per acre". The American farmer, for each individual on the land, produces more food than the farmer of any country of Europe.

The Department of Agriculture makes this informative statement on the point:

"Man power per acre is much more effective in the agricultural production of this country than it is in any European country. In France, Germany, Hungary, and the United Kingdom, before the war, there was one person engaged in agriculture to about 7 acres in cultivation; in Belgium and Italy, one person to about 5 acres; and in the United States, one person to 27 acres. In the foreign countries, cultivation is more intensive and the fields are often small and scattered; in this country, large and contiguous fields permit the use of machinery, draft animals, and tractors. Production per acre is comparatively low in this country, but the product per worker is much greater than it is in the other countries named."

BUTTER PRICES

The rapid advance in the price of butter has caused alarm among the consumer, the manufacturer, and the jobber. It is our opinion the dairy farmer does not feel that the price of butter has advanced out of proportion to the prices of other staples, and in view of this there is nothing to cause serious concern.

People not directly interested in the dairy industry seem to feel that the present price of butter will lead the consumer to use substitutes and that he will not return to eating butter when its price recedes. We do not have this conception. It is true that when the price of butter advances there is an increase in the consumption of so-called butter substitutes, but people prefer butter. Most people return to eating butter when they think they can afford to eat it.

The rapid advance in the price of butter is due to a large demand and a small supply. There are those who hold that the law of supply and demand has been suspended, but we can not accept this reasoning as being wholly correct. Without question, our present abnormal conditions are interfering with the law of supply and demand, but to say this law is suspended is ridiculous.

If we had a billion pounds of butter in cold storage instead of the few million that we have, it would drop to a ridiculously low price. It would be the cheapest fat on the market. In these abnormal times we should keep in mind the factors that govern prices and we should also realize that prices of all staple products tend to establish themselves in relationship to other staple products. Butter is not proportionately higher than flour or pork or cotton cloth, and many other things which might be mentioned. When the price of one product is in proportion to the prices of other products, there is nothing to cause serious alarm.

FACTS FROM 450 MICHIGAN FARMS

Four hundred and fifty farms in Lenawee County, Michigan, furnish some interesting figures on "what to grow and how much".

According to a Department of Agriculture specialist who studied the profits and losses of these farms, the most profitable plant 30 to 50 per cent of their total crop area in corn, 10 per cent in oats, 30 per cent in wheat, 1 to 10 per cent in barley, and 20 to 30 per cent in hay. The most satisfactory rotation, from the standpoint of net results, is one of corn, corn, oats and barley, wheat, and hay. Alfalfa was found to be a valuable addition to this rotation and the Department advises that the acreage should be increased.

Of the best general types of farming, the Department states, from this study of actual farm conditions, "it was found that specialized dairy farms paid better normally than dairy and grain farms, but on the average did not pay as well as the combination of dairying and hog raising. Dairying with hogs and grain usually yielded better labor income than any other combination. The outstanding advantages of this type as compared with others are greater diversity of income, a larger percentage of receipts for sale of live stock and live stock products, and a comparatively small percentage of the income from the sale of crops, because for the most part the crops are sold to better advantage by feeding them to live stock. The types of farming and the general conditions which prevail in this section make the size of a farm a very important factor bearing on the income, according to the bulletin. There is also a direct relation between the amount of capital invested and the labor income of the operator. Generally speaking, the larger the farm and the greater the investment, the greater the percentage or rate of income."

FOOT AND MOUTH DISEASE IN ENGLAND

The Bureau of Animal Industry has informed us of an outbreak of foot and mouth disease in the county of Essex, England. This report brings vividly to our minds the tremendous struggle we had in 1914 and 1915 to wipe out this insidious disease which was accomplished, very largely, through slaughter.

The herds of dairy cattle exhibited at the 1914 Dairy Show were stricken with this disease and permitting the disease to run its course under a strict quarantine, were finally saved. Only a few of the dairy show cattle had to be slaughtered because of the effects of foot and mouth disease. Many of the owners of these herds were led to the firm conviction that the government should establish rules under which highly bred cattle might be quarantined and saved, and they believe that slaughter is unnecessary to control the spreading of this disease.

It is held, too, by many who have given the matter serious consideration, that much good meat was lost and all the hides were wasted by slaughtering and burying animals in herds where a few were suffering from the disease. It seems reasonable that animals that have not contracted the disease could be utilized for meat and that the hides of all cattle slaughtered could be so treated with a solution of corrosive sublimate that they could be used and still make the spreading of disease from such sources impossible.

It is our opinion that the U. S. governmen

should send to England a few well qualified veterinarians and scientists that they might familiarize themselves with the methods adopted there and satisfy themselves as to whether herds might be handled in quarantine and foot and mouth disease successfully and economically eradicated. We are confident that slaughter of grade herds or herds of no breeding is the cheapest and most effective way of handling foot and mouth disease, but it is quite possible with a better understanding of quarantine and the use of disinfectants, that well bred animals could be saved without danger of spreading the disease. The United States government should at this time seize the opportunity offered in Essex County, England, for studying methods of quarantine and present definite recommendations as to what course to follow in case this country again should have an outbreak of foot and mouth disease.

Silage Settles Away from Wall

We have 3 tile silos, 18, 16, and 20 feet across and about 50 feet high and have had trouble with silage settling away from wall. In filling we try to keep silage level and especially well packed close to the wall. Use 3 men inside for tramping. Silage, mostly field corn, some cane and kafir.

Beloit, Kans. C. L. B.

There are various reasons why silage draws away from the wall, such as lack of sufficient moisture to pack well, the cut material not being well mixed, failure to keep the outer edge higher than the center, and lack of sufficient tramping, particularly when the silo is rapidly filled.

Under moisture, we would suggest that corn be cut when it is well dented and the lower leaves dry but the stalk still full of juice. This will be a week or ten days prior to the usual time of cutting and putting corn in the shock for husking. Sometimes this condition goes by before the corn can be ensiled, in which event water should be added in sufficient quantity that the cut material will pack well when taken up in the hands or when it packs firmly under the foot when tramped. Experience is necessary to determine the amount of water to be added and no set rule can be given. Running a stream of water into the blower is the best method of handling it, and more water should be used in the upper portion of the silo than in the lower. Some men add water at the top of the silo but it is more difficult to get an even distribution and to get the water up into the silo.

Possibly the most frequent cause of spoilage is the lack of proper mixing and even distribution. Where the blower distributor is used, this can be most easily done but, possibly because it is easy, it is often overlooked. Care should be exercised that the distributor is moved about and not allowed to stay in one place, and this should be one man's work all the time in order to insure best results. The tendency is for the heavier pieces of stalk and ear to drop just under the blower while the lighter portions and leaves, which do not pack so readily, are blown to one side. These lighter portions are most likely to accumulate at the wall where they do not pack down solidly. This is, perhaps, the most usual cause of silage settling away from the wall.

The friction of the walls tends to keep the silage from settling as compactly or as fast as at the center, therefore special effort should be made to see that the cut material is not only well mixed and sufficiently moist, but that it is thoroughly tramped at the outer edge. This holds particularly true of the upper portions of the silage where there is less weight of material to pack that underneath. As a further aid in securing even settling, the outer edge should be kept higher than the center, the surface being kept in the form of a saucer. After the filling is practically complete, reverse this process, filling up the center and leaving the surface rounded like an inverted saucer with the top higher at the center.

Professor Reed, formerly of the Kansas Agricultural College, suggests that the cut materials be built up about two feet high around the walls and tramped well, then fill up the center and tramp it well, then again build up the outer edge. This will be of real service in keeping the silage from settling away from the walls.

When silos are filled rapidly with large outfits, there is greater necessity of keeping the cut material well tramped and more men should be kept in the silo. With slower filling there is not only more time for tramping the silage, but the daily settling helps out materially in securing a somewhat more even packing. Tramping and proper settling also help to increase silo capacity as otherwise there is a much larger settling after the siloing outfit has left the farm or work has been discontinued.

Oat and Wheat Hay to Cows

We shall be pleased to have you advise us with reference to the feeding value of oat and wheat hay to dairy cows for the production of milk in comparison to that of alfalfa.

Great Falls, Mont. A. M. E.

Experimental findings and the results of practical feeding on dairy farms indicate that there is no single roughage which supplies nutrients more satisfactorily to cows than does alfalfa hay. We count alfalfa hay the best basis for a dairy ration which there is, that is, where it can be secured at reasonable price. It has a considerable advantage over oat and wheat hay in its mineral content but excels them chiefly in the amount of digestible protein it contains. While oat hay contains about 4.5 per cent crude protein and wheat hay about 4, alfalfa has an average content of 10.6%.

At the present prices of concentrates, alfalfa has a considerably higher feeding value than either of these hays. While good results may be secured by feeding the two hays it will be necessary to supplement them with larger amounts of high costing concentrates than may be the case when alfalfa is fed.

The value of the hays depends quite largely upon the time of cutting. If they are allowed to ripen and shatter part of their grain their feeding value is greatly decreased. This fact may be realized from the analyses of oat and wheat straw which give only one per cent of digestible protein to oat straw and only .7 of one per cent to wheat straw. If these two cereal grains are to be cut for hay they should be cut when the grain is in the early milk stage at which time the stems and leaves may be cured into a bright, dustfree hay of quite good quality. If wheat is of bearded variety it should, of course, be cut before the awns harden.

Ration for Pigs

I just got twenty-one nice little pigs from two sows. I would like to keep them until they are six months old, but I don't know if there is any profit in keeping them at present feed prices. Please tell me what would be the cost of feed for one pig for six months. What is best to feed them? How much should one pig get for each meal? I have oats, barley, and, if the weather conditions are favorable, I will have corn too.

Iola, Wis. C. H.

Whether there is profit in maturing these splendid litters of pigs depends a great deal upon the care given them. Of course, the prices of feeds influence the profit very largely also.

It can be figured that with good care these pigs will average a gain of approximately .8 of a pound per day until they weigh about 50 lbs. each. After that weight they will grow somewhat more rapidly. Up to the time when they are 50 lbs. in weight, for each pound of gain, approximately three pounds of grain will be required. After the pigs are older and larger, an increased amount of grain is required for each pound of gain made. From this an estimate can be made as to whether feeding the pigs will be profitable.

Just at this time it is wise to feed the mothers of these pigs very liberally, supplying at least as much grain per day as 1% of the weight of the mother hog. A grain mixture of 300 lbs. of corn or ground barley, 200 lbs. ground oats, and 100 lbs. oil meal makes a very suitable feed. The oil meal can be replaced in the mixture by one-half of that weight, or 50 lbs., of tankage.

There is no feed which can successfully replace skimmilk. If it can be supplied to the mother hogs, it will encourage milk production and indirectly be of great benefit to the small pigs. As soon as the pigs will eat it, a grain supply should be kept before them in a little pan where their mothers can not reach it. Also, milk should be fed the little fellows as soon as they will drink it. Feed growing pigs all they will clean up.

It is most economical to supply suitable pasturage at this time and throughout the period of feeding the pigs until cold weather comes. Rape, alfalfa, clover, fall rye, or most any green feed gives a great advantage over yard feed.

The Nursing Calf

We have been allowing new born calves to remain with our milk cows for a week or ten days, then we take them away and feed them from pail. The question has arisen as to the advisability of letting the calves suck at all; that by doing so it might injure the milking qualities of our cows.

I am told by some producers that a calf should be permitted to be with its mother only for two days, that a longer period will reduce milk production and eventually permanently affect the value of milk producing cows.

Chicago. H. M. H.

Good dairymen hold different ideas concerning the practice of letting calves suck their mothers for a few days after birth. It is the practice of some to permit a calf to nurse once or twice in order to get the colostrum milk and then take the calf away from its mother. Others permit the calf to remain with its mother for a week or ten days, being careful, of course, not to let the calf have too much of the mother's milk, and then after the calf has finished, milk the cow dry by hand.

There is no danger of injuring a cow in any way by permitting a calf to suck a week or ten days, providing the cow is milked clean after the calf has had its milk.

Calves permitted to nurse a week or ten days require a little more time to teach them to drink. For this reason, many dairymen prefer to let the calf nurse once or twice and then let it get good and hungry. No harm will come to the calf if it goes 36 to 48 hours without feeding and then give it 3 or 4 lbs. of its mother's milk. As a rule, when the calf is hungry and has not formed the habit of nursing, it takes to drinking its ration more readily than the calf that has formed the habit of nursing.

Value of Silage

Please advise me how to arrive at a just valuation of corn ensilage after settling about two and one-half months.

The corn would have yielded between twenty and twenty-five bushels of corn per acre. Could a just value for the ensilage be determined, by comparing it with alfalfa hay at $15 to $20 per ton in the stack?

Chadron, Neb. H. E. B.

In a measure, alfalfa hay and corn silage are not comparable, but there is opportunity to arrive at the price of silage based upon the selling price of alfalfa.

Corn silage contains about one-third of the nutrients contained in alfalfa hay. For instance, in 100 lbs. of corn silage there are 17½ lbs. of digestible nutrients; in 100 lbs. of alfalfa hay there are 52.2 lbs. Therefore, corn silage is worth about one-third of the value of alfalfa hay.

Another way to arrive at the price of corn silage is through the price of ear corn. An acre that will yield 50 bushels of corn will produce about 10 tons of silage. Corn selling at $1.50 per bushel or at $75 per acre would make the corn silage worth about $7.50 per ton.

Feeding Pigs

Please make a ration for me for 75 spring shotes, which I desire to sell as fat hogs about Dec. 1. I have plenty of oats, barley, and corn. Distance to nearest mill is 4 miles, and price for grinding is 12½ cents per sack. I also have whey from 500 lbs. of milk delivered daily at Swiss cheese factory.

Darlington, Wis. L. B. H.

Barley is a much cheaper feed than corn and it is nearly as valuable as corn for the feeding of hogs. The present price of oats is too high to be used for fattening hogs. Oats is a rather bulky feed and may be used when rather low in price, and especially for growing pigs.

We suggest grinding barley and feeding it in rather liberal quantities, perhaps supplementing it with a little corn. In order to secure the required amount of protein, we would suggest the use of tankage or oil meal. The tankage or oil meal may be mixed with the whey. In making cheese, the protein of the milk has been removed and whey contains only a small percentage of this element. In order to supply the pig with the necessary protein for growth and development, some feed rich in protein like tankage or oil meal must be used.

If tankage is used, it may form about 7 to 9% of the pig's total ration of grain. For instance, for every 10 pounds of ground barley fed, about 1 pound or a little less of tankage should be used. If oil meal is used, the amount should be 1½ to 2 lbs. for every 10 lbs. of barley fed. Feeding much more of either of these feeds will not bring increased results.

Buy Direct

From Dairy Supply Headquarters When You Need

Dairy Supplies or Equipment of Any Kind

We are manufacturers as well as dealers and we are therefore in a position to give the dairyman the very best value for his money considering the high quality of goods.

The following are some items selected from our big Dairy Catalog. They are pieces of equipment which every dairyman can use to advantage and are sold under The Creamery Package Mfg. Company's guarantee of quality.

New Elgin Pattern Milk Can, 10 Gal. Size	$6.15
Ideal Milking Pail, 10 Quart Size	$1.25
Chapman Changeable Strainer	$1.75
Jupiter Can Brush	.40
Pail Balancing Scale 30-lb Capacity	$2.85

Complete description of these and all other equipment in our catalog will be sent on request. Send your check for items you want and they will be shipped direct to you.

THE CREAMERY PACKAGE MFG. COMPANY
68 West Kinzie Street, Chicago, Ill.

You Owners of Farm Engines and Cream Separators—

Put this machinery on a labor-saving, money-making, war-winning basis by hooking it up with

YOUR BUTTER MAKING

Eliminate the waste time and hard work and uncertainty of dasher splashing and barrel-turning methods.

Your MINNETONNA BUTTER MACHINE, belted to your farm engine or electric motor, will churn, rinse, work, and salt your butter in 25 minutes, while you go about your other work—and will do a better job than the finest butter maker alive can do by hand.

The Minnetonna Book will tell you all about it—how it's made, what it does, why it's better, and how it enables you to get from 10 cents to 15 cents per pound more than ordinary farm butter prices. Send us your name and address on a postal, or fill out and mail coupon.

Wheat By-products in Mixed Feeds

Revised Food Administration regulations now in effect limit the amount of wheat by-products which manufacturers may combine with other feeds. The relative cheapness of wheat feeds resulting from the controlled price might, it is recognized, be an incentive for feed manufacturers to use larger amounts of wheat by-products than in the past for mixing with coarse grains and selling this mixed feed at uncontrolled prices.

A new rule in the latest Food Administration regulations specifically prevents this practice. The text of the rule follows:

"No wheat miller shall mix any greater percentage of his output (1918) of wheat mill feed with other feedingstuffs, or sell any greater percentage to feed mixers for such mixing, than he mixed or sold in the year 1917."

Investigations by the Food Administration have shown that the practice which this rule prevents has not become prevalent, and the regulation is principally one of safeguard.

In addition to this means of control, a similar rule applies directly to manufacturers of commercial mixed feed. This rule, effective October 1, 1918, provides:

"The manufacturer of commercial mixed feeds shall not use more wheat mill feed in the manufacture of the mixed feed than he used in the corresponding month of the year 1917."

The profits which manufacturers of mixed feeds may take are limited to a specified reasonable margin.

These rules do not apply to farmers who mix their own feed, but they will be asked to sign a pledge of honor "not to use wheat mill feeds for any other purpose than the feeding of dairy cattle, poultry, young pigs, young calves, or the preparation of a weekly bran mash for work animals." In addition the farmers are asked to agree not to feed any more wheat feeds than is customarily fed to such animals and not to have at any time more than a 60-day supply of wheat feeds on hand.

The purpose of these regulations and pledges is to make possible an equitable distribution of wheat mill feeds so that the benefits of controlled prices may be shared by the greatest number of producers and users of wheat feeds.—U. S. FOOD ADMINISTRATION.

"Victory means more to those who earn their bread in the sweat of their brow than any other class."—LLOYD GEORGE.

Abortion

Could you tell me what I could do for a cow that has lost her calf? Is there any medicine I could give her? The cause is from an affected bull, I think. This is the first time she ever lost her calf.

Taylorville, Ill. W. M. S.

There is no certain remedy for contagious abortion. Sell the cow to the butcher if she is an ordinary animal, in good flesh, and the only one that has aborted. Cleanse, disinfect, and whitewash the stable and use disinfectants twice a week on stall floors and in the gutters. See other recent answers relative to abortion.

ABORTION

Dr. Geo. Hollabush's cure for abortion and general tonic for cows and mares will prevent abortion and make prompt breeders and correct failure to clean. I guarantee and refund money if not satisfactory. Send for circular.

Dr. George Hollabush, Fort Atkinson, Wis.

CHICKENS SICK? Roup, Colds, Canker, Bowel Complaint, Limberneck, Sorehead, etc., the best remedy is always GERMOZONE. At most dealers or 75c postpaid with 5-book poultry library free.

GEO. H. LEE CO., Dept. 425, Omaha Neb.

Clean Out Abortion

From Your Herd

IT CAN BE DONE BY THE PERSISTENT USE OF

Hood Farm Abortion Remedy

and

Hood Farm Breeding Powder

Hundreds of breeders have saved valuable cows and their calves by giving the Abortion Remedy promptly and freely on the first sign of abortion.

This Remedy strengthens the weak parts and helps hold the foetus. Its success has been remarkable.

Injection with Hood Farm Breeding Powder every day for 21 days before service, then every day for 21 days after service, destroys abortion germs, disinfects the organs and keeps cows in a normal, healthy breeding condition.

PRICES: Abortion Remedy, prepaid, $1.25, $2.75 and $9. Breeding Powder, prepaid, $1.15, $2.75 and $5. Injection Tube, by mail, 90 cents. One medium Breeding Powder, one medium Abortion Remedy, one Tube, prepaid, $5.75.

Write for full information. Mention this paper.

Kill the Hog Lice

Keep your hogs' skins healthy and free from lice and you'll get more pounds of high priced pork. Sprinkle Dr. Hess Dip and Disinfectant freely about pens, feed troughs and yards. Use it the year round to kill lice—to destroy disease germs—to purify the air—to ward off contagious diseases. Disinfect the barns and poultry houses. Also use it about the house, in the sick room, in sinks and cesspools to establish better health conditions.

Dr. HESS & CLARK
Ashland Ohio

DR. HESS DIP and DISINFECTANT

ABORTION IN CATTLE

PREVENTED AND CURED PERMANENTLY
YOUR COWS MADE PROMPT, REGULAR BREEDERS BY
STERILOID

Stop Losing Calves

If STERILOID is used at first sign of abortion cow will go full time and have a healthy calf. If cows or heifers do not come in season, or fail to get with calf, use STERILOID. Cows get with calf after only one treatment. Write today for FREE BOOK. It explains causes and symptoms of Abortion and tells how to cure Abortion, and make your cows regular, healthy breeders with STERILOID.

GUARANTEE We will refund money in every case when STERILOID FAILS to make good. Price $1.00. Mailed Postpaid, in plain wrapper.

Costly parts

War times demand that you protect them from undue wear. Three suggestions.

There is a serious shortage of automobile repair men. You are going to find more and more difficulty in getting repairs made. And you are going to pay more for repair service. Labor charges are up; prices of parts are higher and still on the rise.

Meanwhile many motorists are as unconcerned as ever about their cars. The needless wearing out of engine parts goes on.

Why? Incorrect oil — incorrect use of oil — or both.

Here are three points which should be observed by every motorist:

(*1*) ***Get the correct oil.*** You should use an oil of high quality and of the correct body to suit the lubricating requirements of your car. The use of such an oil is the first and most important step in the protection of your engine parts.

(*2*) ***Maintain at all times an adequate supply of oil in the oil reservoir.*** Lack of attention to this may result in insufficient lubrication, premature wear, and in extreme cases—burned-out bearings.

(*3*) ***Drain old oil and replenish at proper intervals.*** If your instruction book advises fresh oil every 1,000 miles, do not run 1,500 or 2,000 miles before replacing. Oil gathers impurities and thins down in use through condensation of the fuel mixture. Running on such "oil" means premature wear to parts.

It will pay you to send for the booklet, "Correct Lubrication" and read the article beginning on page 3. This book treats this and other subjects with authority and clearness in articles prepared by our Board of Engineers. Address our nearest branch.

GARGOYLE

Mobiloils

A grade for each type of motor

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container. If the dealer has not the grade specified for your car, he can easily secure it for you.

VACUUM OIL COMPANY, New York, U.S.A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world

Domestic Branches: Boston, Detroit, Kansas City, Kan., New York, Philadelphia, Chicago, Minneapolis, Indianapolis, Pittsburgh, Des Moines

Correct Automobile Lubrication
How to read the Chart

The four grades of Gargoyle Mobiloils, for engine lubrication, purified to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E"
Gargoyle Mobiloil "Arctic"

In the Chart below, the letter opposite the car indicates the grade of Gargoyle Mobiloils that should be used. For example, "A" means Gargoyle Mobiloil "A," "Arc" means Gargoyle Mobiloil Arctic, etc. The recommendations cover all models of both passenger and commercial vehicles unless otherwise noted.

This Chart is compiled by the Vacuum Oil Company's Board of Engineers and represents our professional advice on Correct Automobile Lubrication.

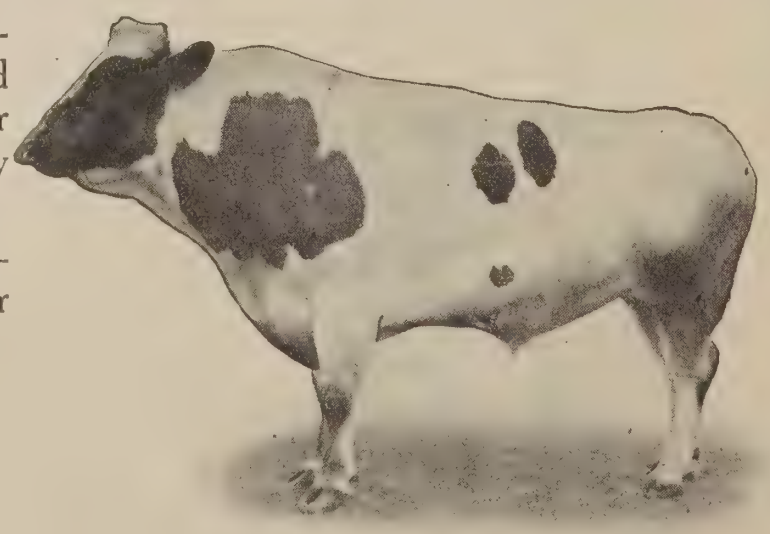
Showing part of the
Famous "Dixie Herd"
Milked with Hinmans.

No Equipment So Necessary As This



Because Hinman Milkers so effectively offset tne help-shortage and high-costs problems, and because they are used not one month in the year, but *every day* and *twice a day*—greatly simplifying what otherwise is the worst daily drudgery on the farm—they are the most important equipment you could possibly install. Thousands of users will tell you that their Hinman Milkers have solved their help problem, reduced operating costs, *improved* the milk flow, and the

HINMAN MILKER

has turned out to actually be *better* for the cows than hand milking!
And Hinman Milkers are so extremely simple, so easy to keep clean—boys and girls the country over have for years successfully operated them.
Their cost is low, because you don't pay for a large pump, tank, gauge, pipe line, or complicated pulsator.
The mere fact that more Hinmans are in use and being sold than any other milker, is your proof that you'll be thoroughly satisfied with the Hinman.
Get the Hinman Catalog—it is worth reading. Write for your free copy.

"The $20,000 Bull" King Segis Pontiac Alcartra 2nd,
Head of the Dixie Herd of Holsteins.

Feeding Velvet Beans to Cattle

HOARD'S DAIRYMAN:—Experiments have been conducted at various experiment stations and by others to determine what is the best form in which to feed velvet beans to cattle. Of course, the most economical method is to allow the cattle to do the harvesting, but where it is not practicable or advisable to do this, probably the next best method of feeding is to soak the beans in the pod and feed in this form; at least this is probably the most economical and most satisfactory method of feeding them on the farm where they are produced. However, when bought by those from a distance the beans should of course be ground into meal, as this is the most desirable method of handling, even though it does add a little to the cost for grinding.

When corn silage and corn stover or other dry hay is available and fed along with soaked velvet beans to cattle, the results are very satisfactory as a rule. When beef cattle are first put on feed one should commence with a small quantity of the beans, say 2 or 3 pounds per day, gradually increasing the amount given until 8 to 12 or 14 pounds per day are being fed, depending on the size of the cattle. If 25 to 35 pounds of corn silage and 5 or 6 pounds of corn stover or other dry hay is fed to each animal per day, along with the above mentioned amount of soaked beans, the result should be quite satisfactory. The above mentioned weights of beans refer to the weights before soaking. The beans should be put in water for soaking at least 10 to 12 hours before they are to be fed.

Beans With Cottonseed Meal Relished

Dairy cattle do not relish velvet beans quite so well as do beef cattle as a rule, yet they seem to like them and consume them to advantage when only about one-half of the grain ration is in the form of beans; the other part being cottonseed meal or some other concentrated feed. A method that has proven quite satisfactory in many instances is to feed a one-half grain ration in the form of cottonseed meal and the other half in the form of soaked velvet beans; replacing 1 pound of cottonseed meal with 2½ pounds of velvet beans. Careful experiments have shown that it takes about 2½ pounds of velvet beans in the pod to equal 1 pound of cottonseed meal in terms of milk production.

All in all, the velvet bean is one of the best home grown feeds we have in the South, and it seems quite clear that the day is not far distant when velvet bean meal will be sold in the North and East to dairymen quite as generally as cottonseed meal is now sold in those sections. When we speak of velvet bean meal, we mean the product secured from grinding the bean along with the pod, as that is the way in which it is now produced.

Alabama. L. A. NIVEN.

Velvet Bean Feed vs. Bran

HOARD'S DAIRYMAN:—I read your article on bran with interest as it is quoted here at $42.20 plus freight from New York. I find, however, that the cheapest and best feed on the market is the new velvet bean meal feed made in Alabama. This has 17.50% protein against 12.3% in bran, 4% fat against 2.6% in bran, and 51% in carbohydrates against 3.71% in bran. This feed sells for $43.50 a ton and is therefore the cheapest feed value on the market. With corn it should make an ideal ration and should be pushed at this time.

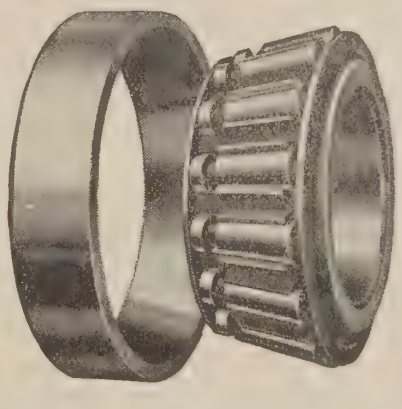
Ridgefield, Minn. L. M. S.

How One Truck Pays Many Farmers

Here's a familiar picture.

Train time; and the truck with her full load of milk cans is backed up to the platform.

She's made her route in short order, picked up milk from your farm and others, and taken it double quick to the point where it can be shipped to the city.



You don't have to get up hours before daybreak in order to hitch up your team and take it to the train, because you can always depend on the truck to make a short quick trip of it.

But don't think for a minute that this truck's job is done when the cans are on the train and the engine has puffed away to the city—its work has only started.

Until dark—or after—just as long as it's needed—this same truck can be saving money for the whole community by hauling supplies, machinery or fertilizer to the farm and hurrying farm products to markets where prices are most favorable.

Through the motor truck new markets have been opened up—old ones given new life—goods carried more quickly and with less spoilage—and distances between farm and city shortened beyond belief, so that your land has greater value.

In this widening of farm opportunities through the motor truck Timken has taken an important part because it has developed a type of bearing which not only makes the truck more practical but greatly lengthens its life and reduces upkeep through the protection it affords to working parts. There's more about this bearing in the booklet F-80, "The Timken Primer." You ought to have a copy.

Canton, Ohio

TIMKEN BEARINGS

FOR MOTOR CAR, TRUCK & TRACTOR

THIRTEENTH AND

Semi-Annual Sale

OF

150 Waukesha County Guernseys

Nov. 6th-7th, 1918, Waukesha, Wis.

WEDNESDAY, NOVEMBER 6th, 1918

EIGHTY-FIVE PURE-BRED FEMALES AND MALES. The breeding and individuality of this offering surpass that of any previous sale. The blood lines are the best in the land, a greater portion of it being of the popular May Rose breeding.

There will be included such offerings as:

Fourteen cows that have either completed Advanced Registry records, or are now on official test. Completed records include: 551.51 lbs., 307 lbs. at 2 yrs., 340 lbs. at 2 yrs., 340.2 lbs. at 2 yrs., 477 lbs. at 3 yrs., 502 lbs. at 3 yrs., 456 lbs. at 4 yrs., 523 lbs. at 3 yrs.

A superb collection of young heifers, out of cows with large A. R. records, many of them bred to sires whose dams are Class leaders.

Pure-bred males backed by production and show winnings as: 2 sons of Itchen May King 25174, one of them out of a 796-lb. cow. Grandson of Langwater Hope, A. R. 1,003 lbs. fat, 2 sons of Langwater Eldorado 39136, and out of officially tested dams. 1 son of Lady Lishman A. R. 698.84 lbs. fat.

Special feature: Complete dispersal of the herd of J. R. Bent, (herd located at Genesee Depot, Wis.). This herd is rich in the blood of the May Rose family, and includes several A. R. cows, with records of 551 lbs. fat, 307 lbs. fat at 2 yrs., 477 lbs. fat at 3 yrs., etc.; also a daughter of May King of Ingleside A. R.

THURSDAY, NOVEMBER 7th, 1918

PURE-BRED MALES AND GRADE COWS AND HEIFERS. There will be included: 2 sons of Royal Rose King of Edgemoor No. 34361. 1 son of Imp. Itchen May King No. 25174. Many others equally as well bred. The grades are all good producers, either fresh or due to freshen soon. Carefully inspected, and every animal offered will be tuberculin tested.

Sale at new sales pavilion just completed. Comfort assured to everyone regardless of weather conditions. **Write for an illustrated catalog.**

Jersey Cattle Notes

For week ending Oct. 4, 1918:

Number of animals registered: Bulls, 162; cows, 516; total, 678.

Number of transfers recorded: Bulls, 144; cows, 487; total, 628.

Butter Bred Jersey Bull

Dropped April 6th, 1916. Solid color. Black tongue and switch. Sire: Loretta D.'s Champion's Son 77902 entered in Register of Merit. Best day's average milk record of his dam and sire's dam 55.6 lbs. He combines the blood of Loretta D.'s Brown Bessie and Merry Maiden with that of Fancy's Harry and Tormentor. One of the best bred bulls in U. S. Dam: Juanita Pogis King 211353. Entered in Class A. A. Register of Merit with year's authenticated record of 9113 lbs. 4 oz. of milk, 487 lbs. 5 oz. butter as a 4-year-old. Dropped live calf 12 days after test. I am going out of dairying or this bull would not be for sale. Write for price. **R. H. CROPPER, NORA, ILLINOIS.**

PERSING'S

Dispersion Sale

of Milk Producing

HOLSTEINS

Oct. 22nd, Clyde, Ohio

Most of the mature cows have cow testing association records of 10,000 lbs. milk or better in a year under ordinary farm conditions.

There are fifteen registered cows and heifers. Also five grade cows that give between 750 to 1,000 lbs. milk per month. The registered cows come by their production honestly as they trace directly to such well known A. R. O. sires as King Burke Hengerveld, Sir Lilith Piebe Korndyke, Elzevere Barnum Sir Paul, and Lilia DeKol Johanna Lad; as well as to such high producing cows as Milly Johanna 27.25 lbs., Riverview Tietje DeKol Ormsby 29.98 lbs. and Peaceland Elzevere 25.59 lbs.

Here will be opportunity to buy practical production type Holsteins. Write for folder giving more complete information concerning these animals. (Sale one mile from Clyde.)

H. L. PERSING, - CLYDE, OHIO.

Indian Bridge Farm

— offers for sale —

ONE YOUNG BULL

dropped June 21, 1917. Well grown and nicely marked. Sired by Langwater Fisherman 21873 A. R. Dam, Imp. Neva's Snowflake 44585, A. R. 4874, 7610.5 lbs. milk, 372.82 lbs. fat, Class C. Herd U. S. Govt. Tuberculin Tested. Price of above bull $250.00. **WAYLAND, MASS.**

Closing Out of Red Poll Herd

Consisting of Herd Bull, seven years old; four cows and six heifers, all bred; one two-year-old not bred, two heifer calves, one bull calf. Selling to make room for Holsteins.

RICHLAND COUNTY ASYLUM FARM,
Chas. W. Snyder, Supt., Richland Center, Wis.

Evamere Farm—Ayrshires

Heifer calves, yearlings and bred heifers and some very good milk cows. Some bulls nearly ready for service. **Evamere Farm, Hudson, Ohio.**

COMPLETE

Dispersion Sale

Tuesday, Oct. 29, '18

Absolutely Nothing Reserved

All cattle over six months of age will be tested by state authorized Veterinarian and a retest in sixty days will be allowed.

I regret having to part with this herd but circumstances are such that to relieve myself of the detail I have decided to sell all. The future is bright for the cattle business, and the buyer who selects breeding animals now and from this herd will be in position to take good advances on the stock when he is ready to sell. Don't stay away thinking the cattle will sell high. Good ones never sell too high and by being present you may secure some animals of excellent breeding at a very reasonable price. We have 40 cows and heifers which will be heavy springers or fresh at sale time. These are real producers—the nice straight individual kind.

Eighteen heifers are sired by the 38-lb. bull which I formerly owned.

There are A. R. O. cows, and daughters of A. R. O. cows, daughters of King of the Pontiacs, King Model, and It. A son of King of the Pontiacs from a 30.16-lb. daughter of Tidy Abbekerk Prince who has 84 A. A. O. daughters. King Pontiac Bettina, No. 204947, is as nice a straight individual as you often see. A son of King Korndyke Sadie Vale whose two dams average 34.56 pounds butter in seven days, and who has five dams in direct pedigree which average 33.514 in seven days. These bulls are under two years of age and very desirable. One son of Rag Apple Korndyke 8th, from an especially fine dam with an A. R. O. record. Remember this one is half brother to the $53,200 bull. A nice bunch of young heifers and three other good young bulls. In all about 85 head will be sold.

If we can't please you we don't want your money. We want our cattle to be as valuable to you, as your money is agreeable to us.

Only one old cow in the bunch; she has five children in high school—three in this sale; and we don't know why they should not be as smart as the other children. Remember the day and date and govern yourself accordingly. Sale will begin at ten o'clock and be positive.

BROOKDALE STOCK FARM IS FOR SALE and a set of Holstein Friesian herd books complete excepting Vol. 7; there are 48 volumes and 8 blue books.

We are going out of business for ever. For Catalogs address

I. J. CASE, ALTA, ILLINOIS.

GREEN COUNTY

HOLSTEIN SALE

MONROE, WISCONSIN

OCTOBER 30th-31st, 1918

In selecting the cattle for this sale, great care has been taken by the management to take only such animals as would be classed as good individuals.

While records have merit, the question of individuality is becoming recognized as being of even greater importance.

Green County is noted for the splendid individuality of its Holsteins and the management is therefore anxious to make the sale a public demonstration of this fact.

Green County Holsteins are not only superior individually, but they have their derivation from some of the best bred sires that have come to Wisconsin.

In this sale, for instance, there will be sons, grandsons, daughters, and granddaughters of such noted bulls as King Alcartra DeKol Pontiac, a 36.59-lb. son of King Segis Pontiac Alcartra, King Segis Pontiac Alcartra, the well known $50,000 bull, Colantha Johanna Champion, the famous son of Wisconsin's greatest cow, Colantha 4th's Johanna, the great King Pieter and King Pieter Lyons, Mr. Moyer's two great sires.

There are heifers in this sale from dams having records as high as 27.32 lbs., as well as from cows having good yearly performance.

In the forenoon of October 30, a carload of choice grade springers will be sold.

Catalogs ready October 21. Write to

Chris. Tochterman, Sale Mgr., Monroe, Wis.

Walworth County Holstein Sale

November 7th, 1918, Elkhorn, Wis.

75 Head of Registered Holstein Cattle

from some of the best bred herds in the state will be sold in the new Stock Judging Pavilion, at the Elkhorn fair grounds, Thursday, Nov 7th, 1918. JOHN G. VOSS, Sale Manager, Elkhorn, Wisconsin

Mr. Guernsey Breeder

We will sell at the

Mass. Guernsey Breeders' Sale, Oct. 24

Raider of the Gateways and 7 of his daughters. He is a 5-year old son of that famous bull Imp. Moss Raider. His dam is Imp Primrose II of the Courtil Ronchin, A. R. 12,087 lbs. milk, 522.7 lbs. fat. Look them up in your catalog.

Arthur W. Wellington, Wellesley Farm, Massachusetts

Butter Market Situation in New England

HOARD'S DAIRYMAN:—At present there exist some rather peculiar conditions on the New England butter market, which undoubtedly will show their effect for some time to come. These conditions have not come as a thunder storm but have gradually worked their way for several years. In some measure the war has hastened their progress because of the higher prices following in its wake.

Conditions in the Past

In years past the New England butter market has really been in a class by itself and practically without competition from outside sources. The reasons therefor are several. New England was nearly self-sustaining in its manufacture of butter. The raw products, milk and cream, arrived at the creamery in good condition and were there manufactured into butter in a satisfactory manner. The butter was shipped directly to markets at short distances, which made it possible for it to be sold and consumed within comparatively short period, whereas butter from the middle and far West, owing to difficulties in transportation facilities and long distances, could not reach the market before it was quite old and often inferior in quality.

These conditions resulted in the people of New England cities, Boston especially, developing a taste for New England made product. Again this butter was put up in fancy shapes and a large variety of packages, appealing to the individual taste and requirements of the various customers. These conveniences could not be had in butter shipped from the West, owing in part to the great distance and lack of refrigeration facilities.

Transportation Facilities Improved

In recent years improvement in transportation facilities and refrigeration while enroute has made it so that the western butter can arrive on the eastern markets in nearly as good condition as when leaving the factory. It can also be produced somewhat cheaper and sold at a lower price. This appeals to the dealers because they can sell somewhat cheaper to the customers and usually at a larger margin of profit. Besides coming in larger quantities, the western butter also is somewhat more uniform and possesses greater keeping qualities and, therefore, gives less trouble to the people who handle it.

Increase in Butter Price

Low prices have been other reasons why competition from New York and farther west was not felt in the New England markets a few years back. In 1906, for example, the average butter quotations were less than 25c per pound. Consequently, the best quality of butter was within reach of the common man. But, with butter now selling at wholesale for more than 60c per pound, the inferior, or lower grades, have a greater competing value. As a result of this, there have arisen new problems on the butter market with which the new England buttermakers must reckon in order to meet the ever increasing competition.

More Up-to-Date Methods in the West

It is still true that generally the milk, and especially the cream, in New England arrives at the factories in better condition than is true of the West but to make up for this, it must be said, with all regard to New England creameries, that the western butter factories are more up-to-date in their mechanical equipment and use more modern methods in the manufacture of their butter. There is really nothing strange about this because the New England factories are older and were equipped at a time when machinery had not yet reached the present high state of perfection. Again, the greater distance from the market made it essential for the western people to use such methods in the manufacture of their butter as would insure the greatest possible keeping quality of the product. For these reasons they have found it necessary to pasteurize practically all of their cream and by use of an artificial starter impart a more desirable flavor to the butter. As a result, their product arrives more uniform and possesses greater keeping quality than that produced in New England, where a more favorable location has not forced the people to use these additional measures.

Northern Butter Has Good Name

That northern butter has an especially good name on the market is well illustrated by the fact that until very recently some dealers found it to their advantage to ship the eastern style packages out West and have them filled with butter which was then sold under the name of Northern Butter. While this was, in a way, a compliment to the New England butter, yet it worked somewhat of a hardship on the manufacturers because, at times, an inferior product was used and in this way lessened the true value of the New England butter. It is this condition that we are very anxious to overcome, because we want to keep the good old reputation so well established. However, unless we realize the changes that are now taking place on the market, and adopt methods which will enable us to compete with the western contemporaries, it is questionable whether we will be able to accomplish this end. It should not be forgotten that the Boston market is rapidly changing its method of handling butter so that it will conform with those in vogue in other markets. The time is not far distant when butter will be bought on score and pasteurization of the cream almost required. The larger packages, commonly used in the West, are also gaining in favor very rapidly, as they entail less handling and smaller loss.

Great Opportunities for New England Buttermakers

The recent ruling of the Food Administration regarding price increase, margin of profit, standardization of packages, etc., has brought a great opportunity for the New England creamery men to reinstate their former superiority. They are again on an equal basis with the producers from the West and can, if they are willing to do so, easily meet competition. It will mean some work on the part of the buttermakers, to be sure, but there is every reason to believe that they will meet this emergency as promptly and as effectively as they have met previous emergencies.

A great many of the creameries are now equipped with machinery of such a nature that they can meet all the requirements of the market by a little extra work and special efforts on their part. Pasteurization of cream and use of artificial starters are some of the things which must be put into practice. In some cases it will be necessary for the buttermakers and creamery managers to see that some of the material reaches the creamery in better condition. In other instances it will be necesary to slightly change the methods of manufacturing, improve storing facilities as regards refrigeration, and methods of handling and packing the products for the market.

If these requirements are complied with the New England buttermaker will find it no hardship to compete with the western contemporaries and I have no doubt that this will be done. I am simply pointing out conditions as they exist in the hope that the old adage "A hint to the wise is sufficient" will still hold true.

MOGENS R. TOLSTRUP,
Vermont. Field Ag't. in Marketing.

The Lasting Benefits of Soil Blasting

Back among the hills of Georgia an interesting experiment in subsoil blasting has been in progress for the past four years. The soil in this district is of a rich upland grade, and the subsoil is red and hard, with emphasis on the hard. In 1914 two acres were measured off. One was left for a check acre, the other was subsoiled with dynamite. Charges were exploded with blasting cap and fuse every 15 feet, 30 inches deep. This thoroughly shattered the hard, red clay, making cobweb fissures in all directions and thus permitting more water to enter than had before been possible. The roots also benefited by the breaking up of the subsoil, new avenues being opened up for them to go out in search of plant food.

Both acres were planted to cotton in 1914. Both received the same cultivation and care, though the subsoiled one got a little more fertilizer than the other. The difference in this respect was not nearly enough, however, to account for the discrepancy between the yield of 1,804 lbs. of seed cotton for the blasted acre and 912 lbs. for the unblasted plot.

Corn followed in 1915. This year both plots received identical treatment and fertilization. They were both kept well worked and clean. The yield of corn in the husk was 2,614 lbs. for the blasted acre, 1,894 lbs. for the other. Owing to the wet weather, it was impossible to weigh the fodder; there were, however, 225 bundles on the blasted acre against 115 bundles on the check area.

In 1916 the plots were in cotton again, and the benefits of the blasting were more pronounced than ever. From the very start of the growing season, the cotton on the subsoil acre outgrew the other, and by midsummer it was at least twice as high. It also fruited much better than that on the unblasted land, and when the yield was measured it was found to have been exactly twice as productive—2,000 lbs. against 1,000.

In 1917 corn was once more planted on the two test acres. The blasted acre yielded 42½ bushels of corn and three full loads of fodder; the unblasted acre, 35 bushels and scant two and a half loads of fodder. The conclusion was therefore forced that the blasting had been a profitable investment. The increased yields soon took up the initial cost, leaving all subsequent crop increases as net profit. This is good farming as well as good business.—Scientific American.

"The Laboratory That Knows How"

Come to The Great Farm Market

The Special Opportunities Department of Hoard's Dairyman is the Market-Place for a great body of the most progressive and prosperous Dairy Farmers and Breeders in the United States. This feature of the publication has come to be one of its greatest assets, affording as it does a direct and inexpensive means of communication for the purpose of Buying, Selling and Exchanging.

Nothing of merit is too small nor yet too large to be successfully advertised in Special Opportunities. This department is a Clearing-House in the broadest sense for the wants and needs of all who patronize it.

Some of the Important Things Advertised

Farm Property—Hundreds of farms are bought, sold, exchanged or rented every year, the parties to the transaction meeting in the Special Opportunities market.

Live Stock—Hundreds of thousands of head of Dairy Stock change hands every year through Special Opportunities, going to all states in the Union and to foreign lands.

Labor—Special Opportunities is a Labor Exchange. It has placed many men in desirable positions and few are the subscribers to Hoard's Dairyman who do not depend upon it when in need of help.

Machinery, Hay, Grain, Farm Produce, Dairy and Milk Plants, etc.—These are a few of the major items that constantly appear in Special Opportunities and rare indeed is the "want" of the individual subscriber that cannot be supplied by some other subscriber.

Hoard's Dairyman,
Fort Atkinson, Wis.

HOARD'S DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

FEEDING THE FLOCK

J. H. HALPIN, WISCONSIN

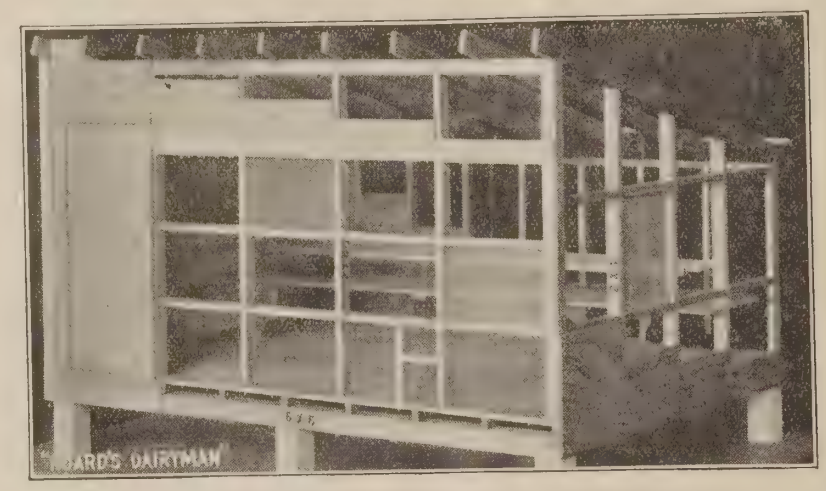
A GOOD many boys and girls will have a flock of chickens all their own this winter. I wrote about the "Junior Poultry House" some time ago and since then have talked with several boys and girls that have started in the poultry business "on their own hook" as one of them said. Many of them are going to keep careful records of feed consumed, eggs produced, and other expenses. In this way they will know at the end of the year whether they have made or lost.

Whether the hens pay or not will depend upon many things, such as the kind of stock that is kept, the sort of a house that they have, how regular one is in caring for them and what and how they are fed. This time we are going to talk about feeding, but I hope you will not lose sight of the other things and if your hens lay better or poorer than the other fellows, try and find out what makes the difference.

In order to get eggs, one must feed plenty of nourishing feed so that the bird will store up a surplus in its body from which to manufacture eggs. A laying hen is always in good flesh at the start of a laying period and the better flesh you can keep her in the more likely she is to continue laying for a long time. The fear of overfeeding has kept many people from getting good egg production. At the same time the ration must be well balanced so that it will furnish about the right amounts and the proper material for forming the yolks and whites and the shells, and must be fed in such a way that the hen will keep in good physical condition. If a hen is fed heavily enough to give good egg production, but the feed is not fed in such a way as to keep her in good physical trim, she is likely to be a very unsatisfactory producer, and in flocks handled in that way the death rate is likely to be high. To prevent this sort of thing, feed every bit of grain that the hens get in a deep litter so that they have to scratch and work for it. To do this keep the floor of the house constantly littered with a deep litter of dry straw or some other kind of scratch material. This is just as essential as any part of the program. Then about an hour before the hens go to roost, feed a fairly liberal amount of the grain or scratch feed well kicked into this litter so that the hens have to work to get it out, but go to roost with good full crops. Then at night after the hens are on the roost work a little more grain into the litter so that they will have some to eat as soon as they come off the roost in the morning. The amount of grain that you want to feed can be determined exactly by the amount of mash or ground feed that your hens consume. For best results it is usually advisable to feed the mash feed in two forms. First, have the box or hopper of the mash in dry form where the hens can have access to it at any time. In addition, give a light feed of moistened mash at noon, about what the hens will clean up in ten or fifteen minutes. Then keep watch of the mash consumed and do not feed grain enough so but what your hens will eat at least one pound of mash for each two pounds of grain consumed. If they seem to refuse the mash reduce the amount of grain until they eat the mash in at least these proportions.

Milk, either sour skimmilk or buttermilk, is one of the best feeds for laying hens or growing chicks. The writer was talking with a man the other day that said he never had been able to get good summer egg production until this summer, and on inquiring found that he had been giving his hens all the buttermilk they would drink. Experiments at the University of Wisconsin have shown that milk for laying hens or growing chicks is very valuable. Perhaps some of you cannot have milk for the flock and in that case will need to use a substitute, such as fresh ground green bone, meat scrap, or tankage. These feeds may seem high in price but they are really economical when fed to a good flock. It has been frequently demonstrated that eggs could be produced much cheaper when some form of meat or milk is added to the feed.

A mash that we used for years with very good results was made up of equal parts of ground corn, gluten feed, bran, middlings, and meat scrap. Many other combinations can be fed and we shall be very glad to answer questions along this line and help each one to solve his or her problem according to local feed conditions. The composition of scratch feed will also vary. Some of you, perhaps, instead of feeding the night feed in the litter will want to feed corn on the ear. In the morning the grain can consist of oats and barley and corn or buckwheat may be added. Good dry corn alone makes a good scratch feed when fed along with mash feed, such as those mentioned above, but the greater the variety the safer the ration.



The boy or girl in town may find it cheaper and more convenient to buy ready mixed feed. In that case be sure and buy one of the egg mashes that contain some form of meat or dried milk. I know a boy that had twelve hens last winter that were fed on a mixture of corn and oats with an egg mash in the hopper and his hens laid more eggs in January than his father's flock of 150 hens. This winter he is to have charge of all the hens on the farm and I am sure that he will make a good profit.

In addition to grain and mash the hens should also have free access to oyster shell. It is just as essential to feed oyster shells as to feed any of the other things. Also it is well to give plenty of grit, lime rock grit preferred.

Some form of green feed is also desirable. For this one can use mangels, cabbages, sprouted oats, or silage, after the hens learn to like it. Clover chaff, from the barn floor, can also be used to add bulk and variety to the ration.

Fresh water should always be on hand so that the hens can help themselves. Perhaps the best way is to have a box or elevated platform next to the south wall of the house and place the water on this. Be sure and have it high enough so that the hens will not kick the litter into the drinking water. On cold days give fresh, warm water again at noon and when you feed in the afternoon, or add hot water. Keep the drinking dish clean.

Above all do not feed more grain or moist mash than the hens will clean up in a few minutes. If you find grain left in the litter after the hens are through eating omit the next feed. Only hens with good appetites are profitable. Watch your flock and discard the drones. It is unpatriotic to feed good feed to poor producers.

OPEN FRONT TYPE POULTRY HOUSE

Every poultry house, whether it is an expensive one or made of old lumber, must be dry, fairly warm, and provide for plenty of fresh air. Have it face the south and let the front have plenty of windows, part of them left open and protected from cold winds in severe weather by muslin curtains.

War Time Poultry Feeds

Grain (Scratch Feed) :—Corn, oats, barley, buckweat. *Take at least two from this list.*

Mash:—(1) Bran, (2) middlings, (3) gluten feed, (4) malt sprouts, (5) brewers grain, (6) ground corn, (7) ground oats, (8) oil meal. *Take Nos. 3 and 6 and as many more as you can secure.*

Animal Feed:—Skimmilk or buttermilk, ground fresh meat and bones meat scrap, tankage, insects (when the hens are on free range in summer). *Some kind of animal feed is essential to economical egg production.*

Green Feed:—Cabbages, mangels sugar beets, carrots, sprouted oats, silage, in winter time. Green grass vegetables, trimmings, etc., in summer. Clover and alfalfa chaff. Table scraps—Use all the waste materia that the hens will eat. Cooked carro peelings and such feeds are good. *Green feed cheapens the ration an keeps the digestive tract in good con dition.*

Mineral Feed:—The hen will no lay eggs until she has enough miner al to manufacture the shell. Oyste shell, lime rock grit, broken eg shells. *Just as important as any par of the ration.*

Charcoal:—Keep before flock at a times.

Water:—Fresh and in abundance before the flock at all times.

Good Laying Rations

No. 1. Feed in Deep Litter:—Fou pounds of corn and 1 lb. each of oat and barley. Feed light in the morn ing and heavy at night.

Feed in Hopper:—(all the time) A mixture made at the rate of 100 lb each of bran, middlings, ground corn and gluten feed, 50 lbs. of mea scraps, and 2 lbs. salt.

Feed in Trough:—(three times week). Same mixture of ground fee moistened with milk.

Green Feed:—Sprouted oats an mangels.

Grit.

Oyster Shell.

Charcoal.

Water.

No. 2. Feed in Deep Litter:—Fo pounds of corn and 1 lb. of barle Feed light in the morning and hea at night.

Feed in Hopper:—(all the time Mash of equal parts bran, middling and corn meal. Salt slightly.

Feed in Trough:—(at noon Boiled oats. Feed as much as t hens will eat in 20 minutes. Add t ble scraps, cooked vegetables, cook small potatoes, cooked potato ski and such feeds.

Milk:—Sour milk or buttermilk drink.

Grit.

Oyster Shell.

Charcoal.

Green Feed.

CALVES SHOWN AT THE GREEN COUNTY (WIS.) FAIR BY CALF CLUB BOYS

Calumet County School Fair and Holstein Sale

Calumet County will hold a Young People's Fair at every district school, and then a roundup fair October 17th and 18th at Chilton, Wis. The regular county fair has not been held for two or three years and it is no more than just that our boys and girls should be given opportunity to exhibit their products.

In conjunction with the fair on the 18th of October the Boys' Calf Club will hold a junior consignment sale. The calves which they fed and a few others will be sold to the highest bidder.

Wisconsin. ROYAL KLOFANDA.

Junior Letters

Hoard's Dairyman Juniors:—Hello, juniors, ow are you? I am just getting ready for my rapping. I have 12 traps, 10 No. 1, 1 No. 1½, nd 1 No. 0. I like the No. 1 the best; with he No. 1 you can catch skunks, muskrats, narten, oppossum, and other animals. There re skunks, muskrats, minks, foxes, raccoons, nd others around here. I have caught 4 unks and 2 muskrats last year. My gun is in ood order. It is a 20 guage; it is a dandy. I ink I will sell it and get a 16-guage. I have iled my traps and cleaned my gun. I have ot to make some stretching boards for unks and muskrats. It is raining today so I ought I would write. I wish some of the niors would write me and tell me their exeriences hunting and trapping. I will answer very letter. My address is Box 82, N. Scitate, R. 1. I have been writing to Joseph Peck n Connersville, Ind. He is my age; he is 14 ars old. I am thinking of buying a bicycle. e have 1 calf, 1 heifer, 3 cows. We have 4 gs but no horses. Our farm contains 21 res. I own a sow this fall. I expect to hunt d trap on over 10 farms around where I ed to live. I will close now and eat my nner.

Rhode Island. Alston P. Spencer.

Hoard's Dairyman Juniors:—I thought I ould write you a few lines telling you of y Holstein cow. I have a heifer. My father as six. They are doing fine. We have had em nine months. We live on a farm of 140 res. I have 4 acres of cotton. My father s 25 acres. I have a team of mules and a rd car. My father has a team of mules d a Dodge car. My mother has a buggy ny. I am going to school this summer. I e my teacher fine. Am in the 6th grade. I eleven years old.

Arkansas. Russell Dean.

Hoard's Dairyman Juniors:—I saw my letin print today and thought I would write ain.

have been very busy lately picking and ning blackberries and getting ready to go k to school.

Two weeks ago mamma and the children nt to grandmother's and stayed a few days. ile they were gone I picked and canned ½ quarts of blackberries in 3 days. Papa fixed pipes out in the factory so we can them by steam which is much easier and y keep just as well. We have over 60 quarts berries canned and 3 quarts of corn and ns canned.

Our little pigs are growing every day. They e some appetites though and we have had move the pig trough away from the fence ause our horse takes quite a fancy to pig i.

Our acre of garden down on the farm is cing fine now. We drove down there last ht to look it over. Our corn is from 8 to 10 high and some of the stalks have at least 3 ears of corn on them. If the frost holds we will have a bumper crop.

ur beans are getting ripe and we are being to gather them.

he potatoes are getting ripe and they are ding good too. The name of the corn is Golden Nugget.

y cousin is at Camp Lee, Va., now but we not know how long he will be there. He is the Medical Replacement Unit doing hosl work.

amma's cousin's son has been wounded rely in France and there is another cousin has not been heard from lately.

ast April I sent a cake of sugar to Iris 3. Hinckley in Alaska. She received it all t and about two weeks ago I received a which was made of Alaskan gold with the d "Alaska" printed on it, from Iris. Don't think that was a very nice gift? I do.

pa makes about 7 cheese and one tub of er now. The milk continues to shrink. largest dairy brings 450 or 460 lbs. of a day now. Help continues to be scarce papa thinks that maybe he has more prodthan he can harvest alone. A week ago I ed my cousin load oats and clover and the horses on the hay fork. I had never that kind of work before and I enjoyed ery much.

ell, I must close now. I will repeat the that some of the juniors write to me. address is Cincinnatus, N. Y.

Mary E. White.

Styleplus make both sides of your dollar count

Good resolutions for every man to make in these war times are:

"I will buy only the clothes that I *need*.

"I will pay the price that brings genuine quality—*and not one cent more.*"

Every dollar you spend should count—Count for you and country.

You will be stylish and thrifty *both* if you buy Styleplus Clothes.

You get reliable quality and style at a nationally known price—*a sensible, medium price.*

By making only a few standard grades in big volume we reduce costs and produce clothing values justly famous with well dressed and economical men.

Correct style. Careful tailoring. Finished workmanship. Faithful wear. Known price.

The best place to buy clothes is at a store, where you can see the different styles, make your selection and get a good fit.

You buy with both eyes open at the Styleplus Store!

Two grades in Styleplus suits: $25 and $30.

Three grades in Styleplus overcoats: $25, $30 and $35.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. AG) for Styleplus booklet and name of local dealer.

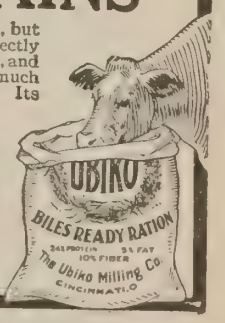
F. Mayer Boot & Shoe Co. Milwaukee, Wis.

Not how much Protein —*but* how much *Digestible* Protein

The chemical analysis required by law on every sack of feed is no guide to the dairyman. The chemist does not distinguish between crude protein and *digestible* protein. Protein is of no more value than so much sand to the dairyman if his cows cannot turn it into milk. What *he* wants, is not crude protein, but *digestible* protein.



UNION GRAINS

Is the best feed not because it contains a certain per cent of protein, but because it contains 20% of *digestible* protein. Union Grains is perfectly balanced. It also has 45% digestible carbohydrates, 5% digestible fat, and only 10% fiber. Because of its digestibility, Union Grains gives much better results than other feeds with nearly the same *crude* analysis. Its nutritive ratio is 1:2.8.

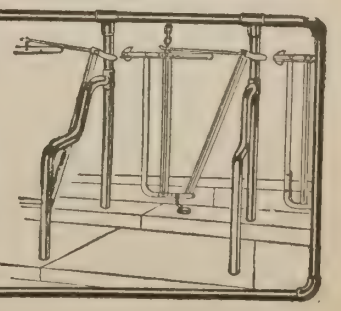
The Food Administration wants you to order your winter supply of feed now while the railroads can handle the shipments. They allow you to order a four months' supply for shipment in sixty days. Union Grains will keep indefinitely. It contains only 8% moisture. At present the price is comparatively low. Place your order at once. Your dealer has Union Grains or can get it for you.

Know the profit or loss on every cow in your barn. Write for free record sheet

THE UBIKO MILLING COMPANY, Dept. H., Cincinnati, Ohio

GET A BUHR MILL

with genuine French Buhr Stones. Do your own grinding of feed and table cornmeal, buckwheat, rye, Graham and whole wheat flour. Do grinding for others—It is profitable. These mills do the fine class of grinding you would get at a big flour mill. Last a lifetime. A boy can operate and keep one in order.



Send for book on mills and 30-day free trial offer.

Guernsey bulls, Advanced Registry breeding. GLENN CLARK, Eau Claire, Mich. 13-5

My son drafted. Must sell accredited herd at once. 8 registered cows and heifers, three choice, high grade cows. Most all fresh or will be soon. A rare chance for some one. Herd bull, son of famous Hayes Cherub 2nd 25147, included. Four choice registered bull calves. GEO. WELCH, Colchester, Illinois.

Guernseys—My herd has increased to such an extent that I am compelled to reduce it. Will sell A. R. cows, heifers, and heifer calves. The young ones are all descendants of Langwater Raritan 17052. He now has 12 A. R. daughters and as a sire has no superior in this country. Write me what you want or come and see them. GEORGE C. COOPER, Superior, Wis.

May Rose 2nd, Raymond of the Preel, Masher's Sequel Penny Come Quick 2nd; these are the near relatives of the Guernsey bull that has headed my herd. Because of war conditions I am disposing of my dairy herd and offer this fine, 3-year-old bull for sale. Healthy, gentle, dehorned, a sure breeder. $400.00. RIDGEWOOD FARM, White Hall, Md.

Registered Guernsey bull for sale two years old, $85. ROLAND GANSER, R. F. D. 5, Jefferson, Wis.

For Sale—Two high class registered Guernsey heifers, fifteen months old, real show prospects, at a bargain. I bought these heifers when young from a very wealthy breeder who has a great show herd, as a foundation for a future herd, but other plans have forced me to sell. Here's a chance for a wide awake breeder. First draft for $300 buys both heifers crated. Will breed same to a high class bull if desired. H. E. SIMON, care Farmers' and Merchants' Savings Bank, Burlington, Iowa.

Jersey Bulls—One to twelve months, $35.00 to $100.00. Sire's dam 819 lbs. butter in year. Dams producing up to 500 lbs. butter in year. Sire is grandson of Eminent's Bess. M. EMERSON & SON, Wheeler, Wis.

Only a large proposition considered. Temperate, capable, draft exempt. Excellent references. BOX 267, care Hoard's Dairyman.

Seed Market Notes

The receipts of clover seed on the Chicago market have been very small because of the short crop and delays in threshing caused by rainy weather. On September 27 prices of $35 per 100 lbs. for good country-run red clover, and $23 to $26 for alsike were reported as being paid to shippers. The demand for clover seed in the east and southeast has been good.

According to the Milwaukee report red and alsike clover seed have not been moving freely from growers' hands at $32.50 to $35 per 100 lbs. for red, and $23 to $26.50 for alsike. The demand for red and alsike clover has been good from the small dealers but only fair from the larger dealers, who appear to be unwilling to stock heavily at the prevailing high prices. White clover, however, has been marketed freely by growers and country shippers at $43 to $46 for 100 lbs., basis clean seed, and the demand from dealers has been fairly good.

The receipts of timothy seed have been about the same as last year, but less trading seems to have been done on the Chicago Board of Trade. The demand has been good from the smaller dealers but rather indifferent from the larger concerns. Shippers are being paid about $9 per 100 lbs. The quality of the seed in Iowa, Missouri, and Illinois is reported good; in Ohio and Indiana poor; and in Minnesota and Wisconsin very poor.

Timothy seed has been offered freely by country shippers at $8.25 to $9.50 for the better lots and the local demand in Milwaukee has been very good. The quality of the seed is not so good as that of last year, being badly hulled, discolored, and weedy.

Canada field peas are being bought from the growers at $5 per 100 lbs.; dried green peas at $7 to $7.50; and Scotch peas at $8. These kinds are being quoted recleaned f. o. b. cars, bags included, at $5.75, $8.50, and $9.50 per 100 lbs., respectively. The domestic demand for peas is not brisk and there appeared to be very little export demand the last week in September.—U. S. Seed Reporter.

Oleomargarine in Canada

The following from the editorials of the "Farm and Dairy" of Ontario pretty clearly shows how the Canadian people are taking to oleomargarine. In the United States the packing house by-product seeks to dress in the clothes of that which it imitates in order that it will be purchased by the people who do not know what they are buying. In Canada, however, the protection of the dairy industry seems to be sufficient and the information of even the "poor folks" enough that oleo is eaten only by the people "who have to take what is given them."

"Oleomargarine is not meeting with the public favor its advocates expected. Mr. J. A. Ruddick, Dominion Dairy Commissioner, reports that since the removal of the embargo on oleomargarine, a little over 4,000,000 pounds of that product has been imported into Canada and 6,000,000 pounds have been manufactured here. The actual consumption of oleomargarine will be even less than the figures given, because of the large quantities now held by importers who cannot dispose of them. "These quantities," says Mr. Ruddick, "are not large compared with 140,000,000 pounds of butter which we consumed during the same period."

When oleomargarine was first introduced, the curiosity of the public had been kept on edge by the great amount of free publicity given to butter imitations by the city press. Everyone was anxious to try oleomargarine and the opening demand was keen. Since then interest has waned. People have found that there is no really acceptable substitute for butter, and as long as consumers can secure the real article they will have it. Incidentally we might remark that the "poor folks", in whose interests oleo was supposed to be introduced, are buying it practically not at all. Here, as in the United States, the big market for oleomargarine will be the hotels, restaurants, and boarding houses, where it is served to people who have to take what is given them. Our experience with oleomargarine up to date has furnished no good reason why its importation into Canada or its continued manufacture in the country should be permitted after the war.

The principal dairy states will waste, this winter, 3½ Billion Pounds of Milk

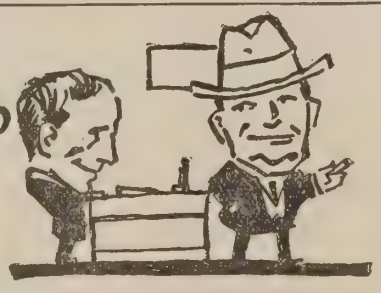
Simply by failing to get it; failing, too, when it would be easy to produce that increase for a world market that demands every possible ounce of food.

Surely this is not the time to overlook any opportunity for increased dairy production and profit. It is no time for waste or neglect. The bending of every effort toward bigger dairy results, for both patriotic and personal reasons, is the duty of every dairy farmer. Here is one way in which the dairy farmers of the principal dairy states could add this winter 3,600,000,000 more pounds of milk. At $3 per cwt. this would mean $108,000,000 more profit.

These are not wild figures. They represent bed-rock facts, and they mean that if all the cows in the principal dairy states were properly watered with James Drinking Cups they would add 3½ billion *more* pounds of milk to this winter's yield—milk that would be worth to the nation as a whole, and to you in part as a producer, at only $3 per hundred, more than a hundred million dollars.

A tidy sum for the dairymen of this country to think about, isn't it? A sum well worth saving in *any* year, but especially so in this period of advancing food prices, increased milk demand and costly feed.

Then there's your own question of labor, and the protection of your herd from disease, to be thought about in this great crisis. James Drinking Cups give each cow clean, safe water that no other cow has had her nose in. They do away with the hard, cold job of herding the cows out to the tank, herding them in again—chopping open the frozen tank.



There are two shortages for you to think about: The world-wide food shortage, and your own pocketbook shortage caused by your cows not getting all the water they want, *when they want it*, at the right temperature, day or night.

They will give more. All they need is the opportunity. James Drinking Cups spell that opportunity. The milk increase of the average cow will *pay for her cup* in 90 days. At the end of that time the account covering the complete installation will be *squared* as a result of increased profit, leaving you the cups for many years of money-making service, either in your present barn or when re-installed in a new one.

Do *your* part toward getting the extra millions which American dairy interests can produce by making milk out of water. Get *your* share of those dollars. It's easy to buy, easy to install and easy to operate James Drinking Cups. We've solved this great watering problem, and solved it *right*—just as we have so many other questions relating to sanitary barn equipment. Write today for booklet, "How to Make More Milk."

Death of Noted Ayrshire Cows

A few weeks ago, Adam Seitz of Wisconsin had the misfortune to lose his noted show cow, Oldhall Beauty 8th. Post mortem showed that she had swallowed some nails. It will be remembered that while on the circuit last year this cow went down seriously in condition and no amount of feeding could put her in condition. She succumbed as soon as the boys began fitting this year. Beauty 8th was well named. She carried one of the typiest of Ayrshire udders and would have been a strong contender at this year's shows. Her passing is a distinct loss to the breed.

Mr. Seitz also lost his young cow, Kilnford Bell 4th, a daughter of his show champion over all breeds, Kilnford Bell 3rd. The show herd was shipped direct to Sedalia, Mo., from Waukesha, Wis., and had a hard trip, encountering extremely warm weather. This animal succumbed shortly after arrival at Sedalia. Our sympathy goes out to Mr. Seitz in his losses but it takes more than that to discourage "Seitz of Waukesha".

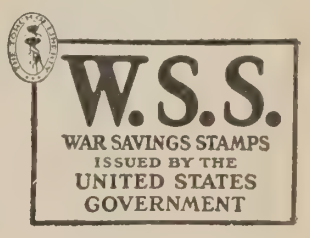
Weymouth Farms, Massachusetts, report the loss of Willowmoor Moss Rose C. This young cow was purchased by Mr. Peter B. Bradley of Weymouth Farm at the 1918 New England Ayrshire Club Sale for the record price of $2,550. On post mortem examination, the veterinarian discovered a piece of wire about six inches long which had apparently been there for some considerable time. Willowmoor Moss Rose C. was a daughter of Morton Mains Queechy. She had three Advanced Registry records, the best of which was 17,005 lbs. milk, 714.32 lbs. fat.

Strathglass Farms, New York, sustained a heavy loss a week ago when their famous show cow, Shewalton Mains Queen, succumbed after a short illness. Shewalton Mains Queen was a prominent entry at the last year's National Dairy Show, winning the grand championship in the Ayrshire female classes. She was also an A. R. cow of merit having an official record of 12,853 lbs. milk, 512.30 lbs. fat.

Vermont. J. G. WATSON.

Larger Milk Demand Follows Prohibition

Increased demand for milk following curtailment of brewing in the United States is a probable development in the nation's food situation during the coming year. In a recent conference with Food Administration officials at Washington, R. C. Reed, Secretary of the Michigan Milk Producers' Association, presented facts of unusual interest to all dairymen. Since last May when Detroit became dry, consumption of milk, according to Mr. Reed, increased 20 per cent and of buttermilk about 50 per cent. To satisfy this sudden demand, it became necessary to bring in milk from greater distances and to a considerable extent utilize the supply formerly made into cheese.



Not only has consumption of milk increased in private homes but many saloons have been converted into lunch rooms and ice cream parlors. These establishments have become new outlets for milk and its numerous products. The large increase in buttermilk consumption is explained by its milk acidity, which seems to allay the alcoholic craving.

While the Detroit percentages should not be considered an exact index to future conditions in other cities, they emphasize the present importance of dairy products in the world's food program. Curtailment in the supply of alcoholic beverages and similar drinks may be expected to stimulate demand for milk to a very material degree.—U. S. FOOD ADMINISTRATION.

Conservation

It's your duty to get every last ampere out of your old battery

It is the duty of each and every one of us to conserve all labor and material in every way possible.

If you neglect your battery, if you don't care how you drive your car, if you wear out the heart of its electrical system—you are working against your country's interest.

Therefore:

Don't neglect the hydrometer test.

Don't neglect filling with pure water.

Don't overwork, overheat or starve your battery.

Don't face the winter without letting us look over your battery and tell you if it needs attention.

Don't forget to call on us and get complete information on how to prolong your battery's life.

Willard Service.

Consider the Felt in a roofing

The backbone of ready-roofing is felt. Upon its quality, primarily, depends the life of the roofing. The felt, however, is no longer visible once it becomes a part of the finished product. So you should know something about its quality *before* buying roofing.

The highest quality of roofing felt is made from rags, consisting largely of cotton with a smaller proportion of wool fibres. Substitutes for rags are paper, straw, and clay. If these substitutes are used extensively a felt which very closely resembles cardboard results. Cardboard is not a good roofing material.

At present the supply of rags is limited and the price high. The possibility of using the substitutes mentioned presents itself. But The Standard Paint Company has never considered them in the manufacture of Ru-ber-oid Roofing.

The enviable reputation enjoyed by Ru-ber-oid during the last quarter of a century is due largely to the fact that only the highest grade of felt has consistently been used in its manufacture. This is only *one* of the reasons why Ru-ber-oid is regarded as the standard of ready-roofings.

Corn and Alfalfa Feeding Trial

A feeding trial was conducted at the New Jersey Experiment Station to compare a ration of corn and alfalfa with a ration of hay, silage, beet pulp, and a mixture of purchased concentrates. This trial is reported in the 37th annual report of the New Jersey State Agricultural Experiment Station. It was conducted as the first step in work to determine the best means of including in the ration the greatest possible amounts of alfalfa hay and corn, either as silage or grain. Further work will involve feeding trials with varying amounts of hay, corn, and silage and also work with heifers to determine whether they can be wintered on alfalfa and corn or corn silage alone to an advantage.

Eight cows were used in the trial through two periods of 30 days each. The cows were in two lots and were alternated after an intermediate period for change of ration. The grain mixture fed the cows on the regular or mixed ration was as follows:

Corn meal, 300 lbs.; hominy, 300 lbs.; distillers grains, 200 lbs.; brewers grains, 100 lbs.; bran, 100 lbs.; Buffalo gluten, 100 lbs.; cottonseed meal, 50 lbs.; linseed oil meal, 50 lbs.

A brief summary of the results is given below. The table shows the average daily consumption of the 8 cows for the 30 days they were on each ration and the average daily production of milk:

	Mixed Ration	Alfalfa and Corn Meal
Alfalfa hay	9.16	23.17
Corn meal		7.63
Silage	27.43	
Beet pulp	4.00	
Grain mixture	6.69	
Milk produced	27.52	25.30
Weight (at end of test)	988.00	982.00

It is evident that the cows did not maintain their production on a ration of alfalfa and corn alone. The decrease in production amounted to 8.1 per cent. This is not a marked decrease when the variety and efficiency of the regular ration is considered. Calculating alfalfa and corn at cost of production, $10 and $25 per ton, respectively, the corn and alfalfa ration was 19.8 per cent cheaper.

The cows readily consumed sufficient amounts of the ration to furnish the necessary protein and energy. One Holstein cow, weighing 1,200 lbs., consumed 25 lbs. of hay and 15 lbs. of corn meal daily and averaged 41.8 lbs. of milk.

Feeding for longer periods will be necessary before drawing any definite conclusions as to the possibilities of such a ration.

During the Iowa Dairy Cattle Congress, a flag raising for Black Hawk County, Iowa, was held at which time a flag with 3,181 stars was unfurled; 25 of these were gold stars.

When You Near the Top

Harder and harder grows the pull—hotter and hotter grows the engine.

Right here is another place to thank the builder who provided your motor-car with *Lynite* Pistons.

For Lynite Pistons stay comparatively cool, when cast-iron pistons would run hot.

And the cooler the pistons, the less the danger of carbon.

The cooler the pistons, the less the danger of pre-ignition or back-fire.

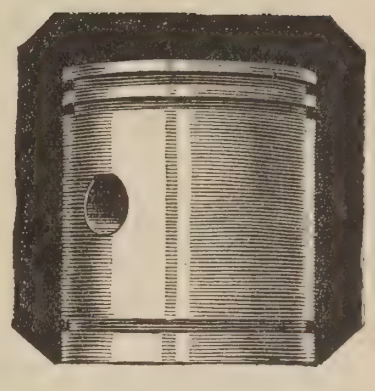
The cooler the pistons, the better your car performs.

On the long, steep climb you have two reasons to be glad there are *Lynite* Pistons in the cylinders.

When the engine heats up and the pistons slow down, carbon literally gets in its hardest knocks. The likelihood of pre-ignition is increased—the possibilities of a stalled engine multiplied.

Moreover, when the engine heats up, more carbon is likely to form unless the temperature of the piston-heads can be kept down.

Lynite Pistons stay cooler because the heat-flow from piston-head to cylinder walls is twice as rapid as in cast-iron pistons—due to the fact that aluminum is twice as efficient as a heat-conductor.



This means less carbon on the pistons, for carbon is simply oil or gasoline broken down by great heat.

And carbon is the cause of many engine ills. It cuts down power and boosts gasoline bills. It produces knocking. It gets into the oil and affects the whole lubrication system, causing increased wear on various parts. It adds to upkeep cost.

That *Lynite* Pistons greatly reduce carbon deposit, however, is but one of a number of reasons for their adoption by many leading manufacturers both in the automobile and aviation fields.

Because they weigh only a third as much as cast-iron pistons, they put new life into an engine. Quicker pickup, more rapid acceleration, greater flexibility, less vibration—all come from the use of *Lynite* Pistons.

If you don't have *Lynite* Pistons in your present car, see that they're in your next car.

The JER$EY MAKES A DOLLAR WORTH MORE

Poor cows are like poor help—the more you feed them the less profitable they are. Jerseys make a dollar worth more because they give the biggest yield with the least amount of feed. In these days of conservation, the Jersey is the only breed for the working farmer who wants to lay something by for a rainy day. The least expensive breed to keep, the most beautiful and satisfactory breed to have. Buy one Jersey and you will never be satisfied until you have a herd. Write to Breeders for pedigrees and prices. Ask us for the facts that have changed many a cow barn from a liability to an asset.

THE AMERICAN JERSEY CATTLE CLUB 351 WEST 23rd STREET, NEW YORK CITY

PUBLIC SALE

At Belmont Stock Farm

Saturday, Oct. 26th, '18

Tacoma, Ohio

80 Head Jersey Cattle

Many Register of Merit Cows and their Offspring. This farm was founded 1878 by the senior Mr. Bailey and grew up a lot younger Baileys, interested and co-operating with the father. The kind of Dairy cows that paid for and equipped the farm and better still, kept the boys on the farm.

The Barnesville Cow Test Association is known wherever Dairy Papers are read, as having the highest average record of any Association in the world. 351 Cows in this Association averaged last year 369.25 lbs. 85% butter, beating the world. All but 14 cows in this Association are Jerseys and practically all of Belmont Stock Farm breeding.

We claim to have practical Dairy cattle, leading bulls of the breed both imported and American bred.

THE FIRST ANNUAL SALE Of Mara Alva Guernseys

will occur on

Thursday, Oct. 31, '18

(Date Changed from Previous Announcement)

AT MARA ALVA FARM (Beginning at 12 o'clock)

SMITHVILLE, OHIO

5 Miles West of Orrville

Smithville has Pennsylvania R. R. and W. & L. E. R. R. service, and Cleveland & Southwestern Railway to Madisonburg sub-station.

To make room for another importation, we have selected from our herd of 175 head

75 Head for This Sale

Consisting of a few very fine show Bulls; about 60% Imported Heifers, bred and open, 40% American bred; a few fresh Cows and heavy springers; Heifers bred and open. Every animal especially selected.

We have sold privately in the last five years, 2,000 head of Registered Guernseys. This sale is held to try out the Public Sale plan, as Public Sales are becoming more popular. We consider this an opportune time to buy seed for the "After the War" demands.

The blood lines are of the most fashionable—Island and American.

Cattle have been tuberculin tested by U. S. Department of Agriculture B. A. I.

For Catalogs and further information address

H. C. McCamon, Sales Manager, Lisbon, Ohio.

A. C. Ramseyer, Owner, Smithville, Ohio.

On Two Accredited Lists

The Hoard's Dairyman Guernsey Herd Has Been Admitted to the

WISCONSIN ACCREDITED LIST

by the State Live Stock Sanitary Board and to the

NATIONAL ACCREDITED LIST

by the Department of Agriculture at Washington. This means that the herd has been found by annual test for the last eighteen years

FREE OF TUBERCULOSIS

To parties desirous of purchasing Pure-bred Stock free of this insidious disease this is an important matter and means more than any single tuberculin test can mean. Every animal guaranteed to be free of the disease when it leaves the farm.

W. D. HOARD, Proprietor, Fort Atkinson, Wisconsin.

Birchwood Guernsey Bulls For Sale

Old enough for service and younger; out of A. R. dams and sired by A. R. bulls. These bulls are good colors and good individuals. Herd on the state accredited list. Send for sale list.
M. L. WELLES, - ROSENDALE, WIS.

"Homestead Farm" "Guernseys"

We are offering five *Grandsons* of *Nella Jay 4th* from two to seven months of age, all from A. R. cows or on test. They are all choice individuals, sired by the highest priced bull of the breed.
W. G. Jamison & Sons, Appleton, Wis.

Tratt Guernsey Herd

Herd headed by Bob Rilma's Monogram whose dam and grandam have A. R. records averaging 887.5 lbs. fat.

Bull calves for sale by him out of cows with good A. R. records.

Write for pedigrees and prices.
RALPH TRATT, WHITEWATER, WIS.

ELDERWOOD FARM

offers for sale a nicely marked 2-year-old

Granddaughter of Lord Waukesha

and out of an A. R. cow with a record of 374 lbs. fat at 2 years and sired by "Serpent" who has 4 A. R. daughters. Bred to a bull whose dam has a record of 465 lbs. fat at 2 years, due to freshen Nov. 3. Price $375. Roy Burton, Eagle, Wis.

HERE'S A REAL BULL

His Sire is May King's Vrangue of Ingleside, the May Rose sire whose first ten tested daughters averaged over 600 lbs. butterfat as 2-yr.-olds and 3-yr.-olds. His Dam is an imported cow now on test that will finish her year with at least 400 lbs. fat, milked twice daily. The Bull himself is a dandy—a calf that would show well in any ring. The right kind of a herd header to use.

Remember he's guaranteed to be right. Write me.
W. A. LAWSON, Rosendale, Wisconsin

Production Reproduction Quality.....

Special offer until November 1st. Bulls from six weeks to one year for $75.00 to $400.00.
Louis McL. Merryman, Cockeysville, Md.

For and Against Bagasse Silage

In advocating the conservation of sorghum and sugar cane bagasse, I speak from years of actual experience in ensiling this valuable by-product of syrup making. My bovines of all ages eat the ensilage made from this heretofore waste cane pomace as eagerly as they consume maize ensilage.

For Bagasse

The points technically to be observed are to carry the fresh bagasse as soon as run through the cane mill to the ensilage cutter, and have that machine set to cut fine (short) and pack into the silo promptly, before the pomace dries, adding as much, or a little more, water to the bagasse than the mill expressed from the cane stalks.

For ensiling bagasse any good cutter will answer, but this shredded waste, as it comes from the cane mill, requires sharper knives than whole cornstalks, and the knives must revolve close to the plate in order to cut the flaccid cane stalks into short lengths.

Bagasse ensilage may be wet after being run into the silo. I usually put a garden hose into the blower, which carries the ensilage from the cutter to the silo, thereby wetting it en route, using a spray nozzle on the hose. One way is as good as the other, if performed with care and judgment.

I not only conserve all the sugar cane on my own farms, but I buy of others to add to my own cattle food.

Every successful manufacturing plant is turning waste product into use, and thereby increasing income, and the time has arrived for the agriculturist to stop waste on southern farms.

Georgia. BENJAMIN W. HUNT.

In reference to sorghum pomace silage will say that I have tried it. For stock cattle that it is desired to get through the winter in any sort of shape it may pay to put it up. A large amount of water is required at the time of filling the silo and the very best you can do at packing, etc., will not be too much. There will be a much larger loss at the top and around the sides than with corn silage. The cattle will have to be starved to it, and if it is not in the very best condition will practically starve with it in the mangers, so I shall not put up any more of it.

Against Bagasse

I have twenty or thirty tons that I have saved over because the cattle would eat so little of it that I shall try again next winter.

Compared with good silage it is about as second grade straw compared with good hay. I once hoped great things from it but have been disappointed. If any one finds a method that will render it of fair value I would be pleased to hear from him through the columns of the Dairyman. What I say does not apply to the unsqueezed sorghum stalks. I have not tried them but suppose they would be all right. But labor, silo space, etc., are too expensive to fool with pomace silage. But I believe it would take storage cattle through the storms of winter and under special circumstances might be worth considering. It is very hard to cut and elevate. Maybe it could be shredded.

Missouri. A. J. MEYERS.

THE PLACE TO BUY HOLSTEINS—Chas. L. Rupp's Dispersion Sale

INDIANAPOLIS, INDIANA, October 29, 1918

50 Registered Holstein-Friesians 50

Catalogs ready October 15th, and mailed only on application to
F. G. Johnston, Sale Mgr., 37 West Lane Ave., Columbus, Ohio

Beaumont Farm, Mt. Savage, Maryland

Our herd sire is KING COLANTHA RAG APPLE, son of Rag Apple Korndyké 8th. His dam is a 30.51 lbs. at three years; granddaughter of Colantha Johanna Lad. *Could you imagine a finer combination?* We consider him one of the best bulls Mr. Cabana ever sold. In build and conformation he is the admiration of everyone who sees him.

We have a son of his, born April 18, 1918, a beauty in every respect; beautifully marked, more white than black; straight in every way. He is out of Van Briseis Pontiac Asiatic 32.60 lbs., a granddaughter of King of the Pontiacs.

This bull will be sold at a reasonable price, and will be worth $2,000.00 when he is ten or twelve months old.

A Rare Chance

To secure a few choice

Grade Holstein Cows

Just fresh and due within a few weeks. These cows were selected to furnish milk for a famous summer hotel which is soon to be turned into a Government Hospital. They are a very fine lot and will be sold in numbers to suit the buyer. There are only a few of this kind in New York State. Wire your arrival. Don't wait to correspond.
River Meadow Farms, Portlandville, N. Y.

Holstein Heifers

325 High grade heifers 1½ to 2½ years old, bred to freshen this fall and early winter, large, well marked, fine condition.

50 Registered yearling heifers, beautifully marked, very well bred, good size, nice condition, extra fine lot.

35 Registered heifers, bred to freshen early this fall, practically all springing now, fine individuals, bred to good bulls.

Positively the best lot of registered and high grade heifers ever offered for sale in New York State. Buy now before the price advances.
J. A. Leach, 203-205 Savings Bank Bldg., Cortland, N. Y.

Ormsby Jane King 2nd

Two Nearest Dams Average 35.64

Ready For Service

HERE IS AN OPPORTUNITY for some small breeder to get a sire of exceptionally rich breeding and splendid type at a very reasonable figure.

ORMSBY JANE KING 2nd was a year old June 24th. He carries a straight topline and is nicely marked.

HIS SIRE, ORMSBY JANE KING, is a son of the "Great White Heifer", Ormsby Jane Segis Aaggie, who has a record of 46.33 lbs. butter and 879 lbs. milk in 7 days.

AS A FOUR-YEAR-OLD she broke the world's records by producing 44.42 lbs. in 7 days and 183.16 lbs. in 30 days.

NO OTHER COW IN THE WORLD has ever made two records above 44 lbs.

ORMSBY JANE SEGIS AAGGIE has a three-quarter sister, Ormsby Jane Piebe, with 38 lbs. in 7 days.

ORMSBY JANE KING'S dam and two nearest dams of his sire average 37.16 lbs. butter in 7 days and 147 lbs. in 30 days. Nothing left to be desired on the sire's side of the pedigree, is there?

THE DAM OF ORMSBY Jane King 2nd is Moneta Pietje with a record of 24.95 lbs. butter in 7 days.

SHE IS A SISTER TO Agnes Pietje and Ilmata Pietje, both with seven-day records above 34 lbs. as three-year-olds. Another 3-year-old sister made over 31 lbs.

THE DAM IS SIRED BY Hillside Della Pender Pietje who has three daughters with records from 31 to 34.86 lbs. as three-year-olds and six three-year-olds averaging above 30 lbs.

THE NEXT SIRE IS Woodcrest Pietje with 60 A. R. O. daughters, over half of them having over 20 lbs.

SO YOU SEE both sides of the pedigree are full of great sires and producing dams and besides this Ormsby Jane King 2nd is one of the first grandsons of the "Great White Heifer".

WRITE US TODAY FOR pedigree and full particulars.

The E. C. Schroeder Farms, Box 576-H, Moorhead, Minn.

The Winship Farm Bulls

Are From Persistent Milking Dams

The 18 cows milking in my herd during April averaged 960 lbs. milk per day and 52 lbs. butterfat, each, for the month. This included heifers milking since last September, October and November. These dams represent the best blood lines of the Creamelle, Johanna, Beets, and Ormsby families.

Sired by Aaggie Burke Cornucopia De Kol

A 29-lb. bull, who traces back directly to the two greatest foundation cows of the breed, Spring Brook Burke and Aaggie Cornucopia Pauline. He is also closely related to the two champion 31,000-lb. milk cows.

If You Want Milky Bulls

Write at once

Winship Stock Farm, Owatonna, Minn.

Young Bulls From Seven-Day and Yearly Record Dams

Dams of all bulls have official records of from 15 to 25 pounds of butter. All are now on yearly semi-official test and will complete records this fall and winter. Nearly every cow has completed cow testing records for three years and has produced up to 600 pounds of butter. These cows are never pushed to the limit. The bulls offered are sired by bulls secured from the E. C. Schroeder and other noted herds. Sires' dams have records up to 950 pounds of butter. Bulls are heavy bone, straight, well marked and large for their age. They will and must please. We guarantee satisfaction.

Otter Tail County Holstein Breeders' Association, J. V. Bopp, Fergus Falls, Minn

Bloomingdale Herd

...HOLSTEINS...

For twenty-five years have been bred for large production and good individuality. Segis Fayne Johanna, the first 50-lb. cow, is of our breeding and made her first 30-lb. record while in our herd. Many of the large producers have been bred here. Foundation stock a specialty.

A. A. Courtelyou, Somerville, New Jersey

MILFORD MEADOW'S

CONSIGNMENT

To the Lake Mills Holstein Sale, October 22-23, 1918

A 31.77-lb. son of Mutual Fobes Longfield De Kol 82959 and Monona Josephine 157363.

A 31.77-lb. bull and brother to M. M. Rag Apple Fobes that sold at the last National Sale for $1,100.

M. M. Rag Apple Longfield is a promising individual sired by Mutual Fobes Longfield DeKol (82959), a well known show bull and son of Fobes Tritomia Mutual DeKol and Lady Longfield 4th's Homestead Lass, a 30-lb. daughter of Homestead Jr. DeKol.

The dam of M. M. Rag Apple Longfield is Longfield Monona Josephine, a 31.77-lb. cow that has increased her record every time she has been tested, having 15 lbs. at 2 yrs., 21.39 lbs. at 3 yrs., 25.50 lbs. at 4 yrs., and 31.77 lbs. at 6 yrs. She is a daughter of Monona Sir Dutchland Pontiac whose dam was a full sister to the dam of King of the Pontiacs, the only double century sire of the breed.

Another good bull calf in this consignment is a son of Lilith King of Rock, a 29-lb. son of King Segis Pontiac, and a 19.94-lb. daughter of Canary Fobes Bessie Homestead whose daughters are going strong.

In addition to these two young bulls we are consigning six splendid cows and heifers due to freshen about sale time to our own herd sires.

QUACKENBUSH for QUALITY HOLSTEINS

My Herd Sire, RAG APPLE PONTIAC is a bull of high class breeding. He is half brother to the famous $25,000 sire, *Rag Apple Korndyke 8th,* the sire of the $53,200 bull calf, the World's Champion 42-lb. 3½-year-old and the youngest 30-lb. heifer. He derives 43¾% of his blood from the noted Century sire, *Pontiac Korndyke,* the sire of the World's Champion 30-day butter producer and who has more 30, 36, and 40-lb. daughters and 1,000-lb. year-record granddaughters than any other bull. He is a grandson of the only double century sire, *King of the Pontiacs,* who has more 40, 30, and 20-lb. daughters than any other bull. He won first prize at the La Crosse, Wis., Fair this year and a daughter of his won first at the Wisconsin State Fair.

BOTH MALES AND FEMALES FOR SALE

Females of all ages. Some are springers and some are bred to the above sire. Some of the cows have A. R. O. records up to 27 lbs. in 7 days.

This stock is of the most popular breeding, such as Korndyke, Pontiac, Hengerveld DeKol, King Segis, Polkadot.

Bull Calves at a Bargain; ages from 1 week to 7 months. Sired by *Sir Pontiac Wayne DeKol 3rd,* a grandson of *Sarcastic Lad,* the sire that won Championship at the World's Fair—and by *King Segis Pontiac Polkadot 8th,* a grandson of *King Segis Pontiac* and *Johanna McKinley Segis.*

Write at once or come and see me. **W. W. QUACKENBUSH, West Salem, Wisconsin**

A Bull That Will Suit You

He's sired by Dutchland Colantha Belle Boy whose dam is a 27.5-lb. 3-year-old daughter of Hengerveld De Kol, and whose sire is the great Colantha Johanna Lad. His dam is Johanna Theresa 2d, a granddaughter of Sir Johanna De Kol. She made 21.68 lbs. butter in 7 days, and 782 lbs. butter, 18,600 lbs. milk in 1 year. Moreover she's a show cow,—took first as a 4-year-old at the 1911 National Dairy Show. This youngster, just a little over 6 months old, is backed by short and long time records. Individually he's a dandy, nearly half white, just the kind you've been looking for. Other young bulls by the same sire and from A. R. O. dams for sale. Write
WAYSIDE STOCK FARMS, A. L. Williams, Est., C. A. Williams, Exec. Fond du Lac, Wisconsin.

SPEED
Is Winning the War

When the news was flashed over the wires, "America Declares War," the answering thought of the people of the world was the one word—"speed."

That was their conception of our characteristic national trait—"speed."

Coincident with this news came the demand upon America's farmers to feed the world.

This demand continued to increase calling for the utilization of the most efficient time saving and production increasing methods.

The value of the motor car to farmers cannot be measured in dollars.

It has won its place as a necessity together with the reaper, the plow and other modern implements.

The economy, steady performance, and all 'round usefulness and complete satisfaction of the Overland Model 90 car has earned the universal esteem of American farmers.

Overland cars everywhere are helping their owners speed up the work of a nation at war, dependably, thriftily, saving time and economizing man power, alike for the captains of industry, the workers in industry, and for the farmers, large and small, and the farm workers.

Everywhere lines of communication between the great agricultural sections and the great industrial centers are being kept open by time-saving, man-saving Overlands.

We want every Overland built and delivered during the war to contribute its share to the war-speed of the nation.

And speed is winning the war.

Co-operation and a New Agriculture

E. R. EASTMAN, New York.

EN the British marched out of Boston in 1775 to fight the Amer- s at Lexington, their band was ing "Yankee Doodle" in derision he Yankees; but when they re- ed some hours later what was left he band was sadly playing the old lish tune "The World is Upside m".

ow fitting the same tune would o the whole world situation today. er in the history of civilization there been such an overthrow of ost all of the standards and cus- s by which we have been guiding business and our lives.

specially is this the case in Amer- agriculture. You can travel up down the land, North, South, t, or West, and no matter where go the same unsettled and un- sfactory farm conditions are id. A feeling of uneasiness and est among farmers is every- re. Nor is this all due to the war. war itself has simply brought to limax and forced upon the atten- of the farmer a series of evils in icultural affairs that have been mulating for many years. Up to 4, when the war began, farmers been selling many farm products w the cost of production and were to continue to do business only by ucing expenses to a minimum, by owing in their own labor and that their families free of charge, and many cases living on capital ac- ulated in better times. These con- ons were particularly true of the ry farmer.

The Push of Necessity

hen the war came and the farmer nd himself between the upper and her millstone. On the one side he s given the tremendous responsi- ty of raising food and clothing plies for almost all of the entire rld. He was told that "food will the war" and that he must raise food.

n the other side, farm machinery, tilizers, in fact all farm supplies nediately jumped in price and ne of them became impossible to ob- n at any price. Farm labor, al- dy at a minimum, began to leave farm attracted by the big wages d by war factories, and later to present the farmer in the trenches. as farmers were called upon to nost double production with only ut half the labor needed to do it. top of this and worst of all, mar- ing conditions were in such shape that although the consumer was paying enough for his supplies, the farmer was selling for less than cost of production.

At last the farmer saw what a few far-sighted leaders had seen and preached for years—that if American agriculture was to continue to prosper, something must be done.

What was done?

In the first place and as a first consideration, our country and our allies needed food and food there was, is, and will be. Profit or no profit, every red-blooded farmer has worked and is working as he never worked before to insure sufficient production to help win the war. So well has the American farmer responded to this great responsibility that he has won the admiration of all the world.

In the second place, history will record the last four years as the great turning point in American agriculture, the beginning of the co-operative movement that is destined to revolutionize our American farming and our whole business system.

Turning the Corner to Co-operation

Co-operative organizations have sprung up literally by the hundreds in almost every section of the country, and even though these organizations were formed hastily and have grown rapidly, they are built on foundations of business principles that mean they are here to stay. Already these organizations deal in nearly everything that touch farm life. Some are strictly buying co-operatives, some sell some single farm product, others do both buying and selling, and others go still farther and bring the influence of their united membership to bear upon many general problems that touch farm life.

CHILDHOOD'S HAPPY HOURS

Taking the business of selling milk as an example; it is only a little over two years ago since the dairy farmer had absolutely nothing to say about the price of his product. The dealers were in absolute control of the business with the result that most farmers were selling milk for less than the cost of production. Today there are at least sixteen milk producers' associations in control of the milk which goes into nearly every large city of the country, organized to sell their members' milk and to get a fair price for it.

A Short History of the Dairymen's League

The Dairymen's League is by far the largest of these dairy organizations and may be cited as a typical example of the rapid growth and success of the co-operative movement. This organization began work about eleven years ago but no one except a few patient, far-sighted leaders had any faith in it. It everywhere met with the old cry that farmers would not stick together. In fact, past experience of similar organizations would almost justify this conclusion. Up to the spring of 1916 this organization, after years of hard, discouraging labor, had only 13,000 members representing 190,000 cows, and many of these members had little faith and could not be depended upon in case of trouble.

Then in the spring of 1916 came the Chicago milk strike, in which the Chicago dairymen surprised the world by their ability to stand together until they were rewarded by success and recognition. Encouraged by the success of the Chicago producers and driven beyond endurance by the prices offered by the dealers, the Dairymen's League set its own prices for the contract period beginning October 1, 1916. The dealers refused to accept them and there followed a contest perhaps the most remarkable in the history of agriculture in eastern United States and in which the League won a complete victory.

The strike lasted for two weeks and the longer it lasted the more determined were the dairymen. In some cases it was difficult to get the men to release their milk even after the dealers had bought it on League terms. Farmers by the hundreds left their work and attended enthusiastic meetings, some of which were the largest ever held in the community. Others spent days and even part of the night canvassing their neighbors to get them to join the League and stop sending milk. Men who never before had said a word in public, made enthusiastic and able speeches at meetings, encouraging their weak-kneed brothers to hold on. Automobile tours with hundreds of machines in line made trips across the counties, and great torchlight parades led by bands marched the village streets. This great demonstration held throughout the New York district marked the beginning of a co-operative movement among dairymen that nothing can stop.

What It Accomplished

Two years ago, before the contest with the dealers, there were 13,000 members and 190,000 cows; today there are 58,000 members owning about 700,000 cows. Other similar organizations have been organized in all parts of the country and have made similar growth.

Subscription Rates

Subscription in United States and Mexico $1.00 per year; 6 months, 50 cents; 3 months, 25 cents. Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through Wm. Dawson & Sons, Cannon House, Breams Building, London, S. C., Eng., or their agents, including the news dealers and book sellers in all foreign countries.

Subscription agents for New Zealand—Bray Bros., Agricultural Hall Building, Dunedin, New Zealand. Also—The New Zealand News Co., 150 Wakefield St., Wellington, N. Z.

Subscription agents for Australia—Australasian News Co., 226 Clarence St., Sydney, Aust.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $2.56, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of the Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome immoral and quack advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Hairless Pigs

There are born every spring a considerable number of hairless pigs. Practically every county in Wisconsin from which we have had reports and where swine raising is developed has had cases of this malady.

Goiter, or an enlarged thyroid gland with a disturbance of its function, is the cause of hairless pigs. Both sow and young are afflicted with enlarged glands.

The enlarged glands are deficient in iodine, which is essential to the proper action of this gland and the production of normal young.

Iodine supplied the female breeding stock during the gestation period will prevent this trouble. One-third to one-sixth of an ounce of potassium iodide per 100 pounds of feed will prevent hairless pigs. Do not use more. The potassium iodide can be procured at any drug store. It should be powdered to a meal, as fine as flour, and then mixed into 100 pounds of the feed. There is no way of telling beforehand whether or not a sow has goiter.

Rearing the breeding sows with plenty (25%) of good roughage, such as alfalfa or clover hay, in the ration, and not too much protein may do much toward preventing this trouble and avoid the necessity for the use of the potassium iodide treatment later. But if you had hairless pigs in the spring of 1918 it will be good insurance for a crop of live pigs in the spring of 1919 to use the potassium iodide treatment the coming winter. —Wisconsin College of Agriculture.

It is impossible to over-produce any line of essential food.—U. S. FOOD ADMINISTRATION.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

The Hay Fever Season

The meadows gleam with molten gold,
That farm boys know as golden rod.
And summer, growing dim and old,
Throws frost across th' crumbling sod.
There is a change—a saddening change,
Bare stand the stripped and ghostly trees,
(This nose of mine is like a rose,
The red, red kind the south wind blows)
Excuse me—while I sneeze!

At dusk, in every farm house there
Across the valley and afar,
The home lights glimmer, faint yet fair,
Each one a sort of holy star.
It is a new and different world,
A new call on the evening breeze.
(I weep and sigh and groan and cough
And bark my blooming glasses off,
Excuse me, while I sneeze.)

The only way they could get that farmer's son to rise on time in th' morning, after he got to camp was to substitute a rooster for th' regular bugle.

Getting Him Down to Earth

The young college boy had been working his way on the dairy farm during a particularly beautiful summer. As Dairyman Jinks came through the barn door, he walked over to meet him.

"I could stay on a farm forever," said he, "see how the dusk settles upon the hills. Note that exquisite mauve and gold in the western sky. See the rich green and greys. And the fields of grain are waving so softly in the lush twilight."

"Son," said the dairyman, "all of that may be true, but would you mind feedin' th' hogs?"

"You get out of a farm what you put into it," remarked Hi Muggs, of Cloverhill Dairy, "but so many of us only want to do th' harvestin'."

Little Helen and her mother were takng a train ride. It was early in the morning and what seemed to be a freight suddenly loomed on a siding. A man with a wrench was mending something under one of the trucks.

"That, my dear," said mother, "is a milk train."

"And, oh look!" cried the little girl, pointing to the man, "there's somebody milking it already."

Heard in a Southern Town

"Rastus, are you patriotic? The government is asking you to raise more hawgs and help win the war."

"I sho is raisin' 'em boss,—twict as many."

"Then you are helping the Food Administration?"

"You bet I is, suh. De mo' I raise de mo' I eats. Mah food ain't been better since I kin remember."

The Sun Keeps Shining

No matter what the war may do,
No matter how the shells may fly.
The up-above is mighty blue—
The sun is shining in the sky.
So long as there are bumper crops,
So long as there is heaps o' grain,
'Twill find us—when th' fighting stops,
Serene and hopeful once again.

I've driven over miles and miles
Of farm land, shining in the sun.
And through th' weeping, there are smiles,
That make th' big job more like fun.
That warm flood on a fellow's back,
Th' golden dics there overhead,
There's not a thing the acres lack
To give us bounty and th' bread.

The sunshine helps a lot, I'd say,
To keep us optimistic, too.
It sort o' drives th' gloom away,
That sometimes gets th' best of you.
May it shine down far "Over there,"
On every fighting lad of ours,
And keep their cause supremely fair,
Through all th' solemn battle hours.

You Can't Afford This

No farmer is rich enough to feed 60-cent butter to his hogs or his calves in partially skimmed milk.

It's a waste of money.

It's a waste of food.

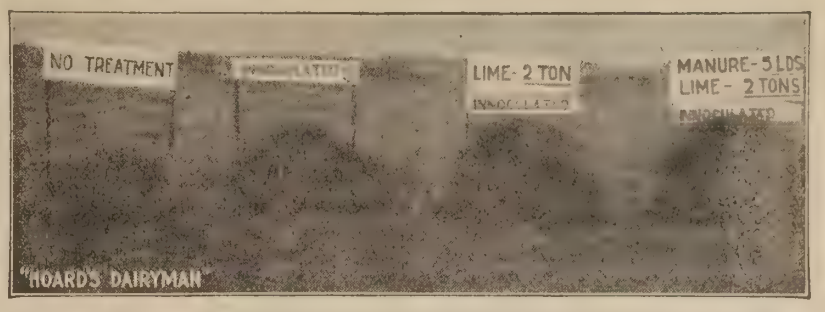
It's a waste that your pocketbook, your neighbors, your country, all condemn.

But it's a waste that is going on today on every cow-owner's place where an inferior or half-worn-out cream separator is being used, or where the farmer is skimming by the wasteful "gravity" method.

And it's a wholly unnecessary waste, too.

Because a De Laval Cream Separator will soon save enough cream to pay for itself, and put a stop to all the waste of cream and time and labor for many years to come.

There is no other cream separator that can compare with the De Laval in clean skimming, capacity, ease of operation, freedom from repairs, and durability. It's the world's greatest cream saver.



Order your De Laval now when you need it most and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or, if you don't know him, write to the nearest De Laval office as below.

The De Laval Separator Co.

[h]e Why, When, and Where of Acid Soils and Liming

EMIL TRUOG, Wisconsin College of Agriculture

THE VISIBLE RESULTS OF AN EXPERIMENT IN GROWING ALFALFA

Lime not only corrects acidity but it insures successful inoculation, and on this particular soil manure made a decided improvement in the crop. However, the soil was acid and the lime seems to have been the big essential. The Truog acid test will measure the amount of acidity in the soil and gives one a better idea of the correct amount to apply per acre.

[F]R two-thirds of the soils of Wis-[c]onsin are acid and will have to be [t]reated before they can be made to pro-[d]uce as they should. Food production [i]n Wisconsin at the present time can [b]e increased more through the proper [u]se of lime on the acid soils than any [o]ther available means. Many farmers [a]re fully recognize the need of lime as [i]ndicated by the fact that during [l]ast year the farmers of Wisconsin alone have probably used over [1]00 tons, or more than double the [a]mount they ever used before. Lack [o]f shipping facilities and scarcity of [c]ars prevented an even greater use. [I]n order to apply lime profitably and [e]ffectively, a clear understanding of [t]he cause, nature, and relation of soil [a]cidity to plant growth is very helpful and necessary.

What is Soil Acidity?

[T]here are few subjects in agricul-[t]ure about which there has been as [m]uch confusion as about soil acidity.

TRUOG SOIL TESTING OUTFIT WHICH DETERMINES THE DEGREE OF ACIDITY AND AMOUNT OF LIME NEEDED

[T]here is, however, nothing mysterious [a]bout soil acidity and it is not difficult to get a clear understanding of [s]oil acidity is due to an excess of [t]he acids over bases in the soil.

[S]oils and in fact most of the materials and substances in nature consist [o]f a combination of acids and bases. [C]hemists have found that all known [m]aterial can be broken up into simple [s]ubstances called elements. Some ma-[t]erials are composed of two elements [w]hile some of many more. After ana-[l]yzing all known materials they have [f]ound that there are about 80 ele-[m]ents out of which by various com-[b]inations all known [m]aterials are formed. [I]ron, gold, phosphor-[u]s, potassium, nitro-[g]en, oxygen, carbon, [c]alcium are ele-[m]ents and combine to [f]orm different com-[p]ounds. Some elements [f]orm acids when they [c]ombine and the others [f]orm bases. Common [v]inegar and muriatic [a]cid are typical acids. [S]oda is a base. Soaps [a]re usually alkaline [d]ue to the excess of [a]lkali they contain. A [s]imilar thing about an [a]cid and a base is that [t]hey always combine [w]ith each other when [t]hey come together and [f]orm a neutral com-[p]ound called salt. Com-[m]on table salt is [m]ade when hydro-[c]holric acid (muriatic acid) and the base sodium hydroxide are mixed together. If more acid is added than there is base with which to combine then there is some acid left over and the mixture is acid from the excess of acid. If there is an excess of base, then the mixture is basic.

As was stated, the particles of soil consist of a combination of acids and bases. The soil particles of upland soils are largely mineral salts. Now when there is an excess of acids over bases the soil is acid. If there is a great excess of bases the soil is alkaline. Soil acidity thus simply indicates an excess of active acids over bases in the soil and hence can be corrected or neutralized by adding a base like lime.

Why Do Soils Become Acid?

All soils where the annual rainfall is 25 inches or more tend to become acid due to the more rapid leaching away of the bases than the acids. When water comes in contact with the soil, it dissolves the bases of the compounds that make up the soil to a much greater extent than the acid constituents. As a result from 200 to 500 pounds of bases, mostly lime, are leached out and washed away per acre annually in Wisconsin, while the leaching of acids is comparatively very small. The more a soil is cultivated the greater the leaching and the more rapidly does it become acid. Many crops also take out much more bases than acids from the soil and help to produce an acid condition. The formation of acid soils is thus not at all strange or mysterious and it is entirely natural for soils to become acid after cultivation for a number of years. Sandy soils leach readily and are usually acid even in the virgin condition. Virgin clay and silt soils are sometimes also quite acid.

Some fields which are situated at the bases of slopes or in the bottoms of valleys receive lime in the drainage and seepage water from the higher land and hence do not become acid or do so only very slowly. The higher parts of a field usually become acid first.

So far, purposely, nothing has been said about organic acids that are formed when green crops or manure are plowed under, or when dead vegetation of any kind accumulates. Many writers state that soil acidity is entirely due to organic acids formed in this way. In the case of upland soils our experiments have shown that the organic matter, and hence organic acids, may be removed and still the soils remain practically as acid as before, indicating that the acidity is due largely to mineral acids, formed by the removal of bases from the mineral salts as just explained. Some upland soils contain scarcely any organic matter and yet are extremely acid. It is to be clearly noted, however, that the acidity of acid peats and poorly drained soils is often due largely to organic acids. In well drained and aerated soils organic acids soon decompose and hence do not accumulate. Plowing under heavy crops of green manure like rye may produce an acidity due to the formation of organic acids. This acidity is temporary and usually disappears in the course of a year.

Why is Soil Acidity Injurious?

It is often stated that soil acidity is injurious because it directly attacks and injures the plant roots and directly affects the bacteria in the nodules of legumes where nitrogen is fixed. Results of our recent experiments do not agree with this. We find that when soils become acid the supply of available lime and other bases in the soil becomes too low to meet the plant's own need for these. An acid condition is simply the positive indication that the supply of available lime is getting low.

It is to be clearly noted that even acid soils still contain lime that is bound up with the soil acids, but since there is an excess of soil acids, all of which try to hold on to the lime, it makes it extremely difficult for some plants to get sufficient lime unless more is added to the soil.

In the processes by which plants build up the different compounds of which they are composed, various acids are formed that must be neutralized, or else the plant sap becomes so strongly acid that the growth processes are interfered with or stopped. In order to neutralize these acids, the plant must get sufficient lime from the soil. If the growth of legumes is lowered or stopped by a lack of lime or any other cause, then nitrogen fixation in the nodules by the bacteria is also lowered or stopped. The nitrogen which is fixed is a by-product or waste material of the bacteria in the nodules and must be removed by the plant in order for the bacterial activity to continue and make possible the fixation of more nitrogen. The legume plant is not able to remove this nitrogen from the nodules unless other conditions are such that it can grow normally and thus have use for this nitrogen.

Plants like alfalfa and sugar beets require large amounts of lime and have comparatively weak feeding powers and hence are affected greatly when a soil becomes acid. It requires about 100 pounds of lime carbonate to produce a ton of alfalfa. A ton of red clover requires about 75 lbs. Oats, rye, wheat, and corn require only about one-fifth as much lime as alfalfa. Cabbage, lettuce, and most all garden crops require large amounts of lime. Gardens should always be limed if the soil is acid. It is thus very easy to understand why some crops like alfalfa, clover, and sugar beets are affected by an acid soil much more than crops like oats and hay. Some non-legumes are affected just as much by an acid condition as the most susceptible legumes. Legumes like cowpeas and lupines are not affected any more than

(Continued on page 442)

THE EASIEST WAY TO APPLY LIME IS TO USE A LIME SPREADER

Experiments at the Ohio Station have shown that 2 tons of limestone are as efficient as 1 ton of quick lime, provided the former is finely ground. Limestone is considered finely ground when three-fourths of it will pass through a sieve having 100 meshes to the inch. When 2 tons of limestone can be purchased and spread on the soil at an equal or less cost than 1 ton of quick lime or 2,650 pounds of hydrated lime, the limestone should be used. Limestone siftings sometimes can be secured. Although rather coarse, there is enough fine material present to justify their use, provided they can be purchased at a price which will make it practical to use 4 or 5 tons per acre.—From Ohio Extension Bulletin No. 1.

Southwestern Dairy Notes

SANDERS SOSLAND, MISSOURI

CONSUMERS of dairy products in Kansas City and generally throughout the Southwest are paying the highest prices in history for butter, cheese, milk, ice cream, and other food commodities of the cow. Despite this, there has been no noticeable let-up in the consumption of dairy food, which is reflected by the fact that the demand far exceeds the production in this territory. Creamery butter at this writing is quoted in wholesale lots at 48½ cents per pound, making the price which the ultimate consumer must pay at 65 cents per pound. Milk retails at 15 cents a quart, and cottage cheese sells at 20 to 25 cents a pound.

Drouth in the Southwest accounts for the present extremely high level of prices. Pastures have been available for dairy interests in only a few scattered districts. The drouth period, extending over several months, was the most serious in the history of the Southwest. Dairymen normally able to carry their stock through the summer on the grazing areas in this territory were forced to make heavy purchases of feeds at the highest levels ever known. The abnormal weather conditions reduced the output of milk products. Several times in the last few months, when the drouth was at its most serious stage, close students of the dairy situation sounded a warning against an acute shortage of milk, but rather than permit such a situation to arise, dairy interests exerted themselves to overcome the trying feed conditions.

Usually, when a sharp advance is witnessed in the price of dairy products, loud complaints are heard among housewives. However, a better knowledge prevails among consumers as to the conditions affecting the dairy industry; also, there is a feeling that "we can't pay too much for our essential foods," as one woman expressed herself when advised of a further advance in milk and butter.

One of the important handicaps to the dairy industry of the Southwest —the lack of a plentiful supply of efficient dairymen—is being slowly overcome. There is a tendency among eastern dairy interests to migrate to the southwestern territory, particularly in Kansas and other important alfalfa and wheat growing sections. Great difficulty has been encountered by dairy interests in the New England States and in other sections of the East the past two years. Last winter, car shortage and the acute congestion of freight material on railroads delayed shipments of feed to the eastern dairy interests. Today, there is a serious shortage of bran and shorts in the New England States. The Southwest includes the greatest alfalfa producing states in the country, Kansas, Nebraska, Oklahoma, Colorado, and Missouri, while mill feeds are more easily obtained owing to the generous production of wheat here.

A few years ago eastern dairymen were reluctant to migrate to the comparatively new dairy sections of the Southwest, owing to difficulty in disposing of dairy products. Now, however, this difficulty has been overcome; large creamery manufacturies are beginning to dot the southwestern country, and consumption of dairy products has expanded with the enlarged population.

"Please, help me get a car of bran."

Such a communication or plea, which a few years ago would have been considered "one of the seven wonders of the world", today is common in offices of agricultural journals. Nor are such communications from dairymen looked upon with surprise; rather "ye olde editor" seeks information as to where some bran may be obtained. But the feed specialist and the editor himself are as much at sea as is the dairyman in search of the feed. Heretofore, millers were forced to plead with consumers to make a purchase of their product, but those seemingly "good old days" have passed, temporarily at least. Now it is the consumer who pleads with the miller or dealer, and in most instances the pleading is futile.

Besides communications from dairy interests seeking a car of bran, complaints are coming about prices, which are reported far out of line with the maximum schedule fixed by the United States Food Administration. The complaints are against retail feed dealers. One Missouri dairyman reports that he was forced to pay a price practically double the government maximum for a quantity of bran. This may be true in other dairy districts. The small retail dealers are operating under no government license, so are at liberty to charge as much as they can (or desire) for bran. With the present acute scarcity, dairymen are almost forced to pay the price the profiteering dealer demands. However, where possible, the small retail dealer should be ignored if the prices he quotes are far out of line with the government maximum. It is regrettable that steps have not been taken to curb this rapaciousness among small dealers. They deserve punishment.

Co-operative bull associations are gaining a foothold in Kansas. At a recent meeting of community dairy farmers at Bonner Springs, Kansas, the need for better bulls was emphasized.

"With the cost of milk production advancing, the need for better cows is imperative," declared Professor O. E. Reed. "Good cows are not for sale. When you offer a few cows for sale, they are not your best, and this is true of your neighbors, also of outside dairymen. The best cows are profitable to the owner and only the stock that is not producing as much as it should, is, as a rule, offered for sale. However, it is possible to obtain good bulls, and this is what we must purchase to build up our herds."

Several communities in the Sunflower State have banded together in the co-operative use of bulls. According to advices from leaders of the plan, it is proving successful.

Kansas and Oklahoma will have a fourth cutting of alfalfa hay, but the yield is not expected to be heavy. Southwestern states have suffered severely in alfalfa production this year, owing to high temperatures and an absence of moisture during the greater part of the growing season. With the growing season closing, students of the alfalfa situation are of the opinion that the entire production of alfalfa in the Southwest this year will be less than 50 per cent of normal. However, dairy interests have been blessed in one respect by nature, for the quality of the hay produced is leafy which makes it excellent for feeding cows.

A better supply of milk is promised Kansas City consumers by the recently installed dairy commissioner, L. G. Rinkle, a former college dairy professor. Dairy distributors offering unclean milk are being prosecuted, and already a noticeable change has been witnessed in the quality of milk offered. The larger distributors in the city, who supply practically 80 per cent of the total milk consumed by Kansas citizens, are installing sanitary machinery and are complying with other requirements of the health commission.

A friend of mine visited one of the army camps in this territory many weeks ago. He had occasion to seek a light lunch in a town near one of these camps, and, to his surprise, found he could not obtain a cheese sandwich. "The army authorities have forbidden us to serve raw cheese to soldiers," the dairyman was told, "so we are keeping none of this fo in order to avoid any difficulty." U on making further inquiry, this dai man learned that at the camp wh he was visiting, and at others in country, a ban had been put on use of raw cheese at army mess Only cooked and baked cheese co be served. Why? The surpri dairyman was told that raw che was suspected of having been a sou of the spread of disease, owing to ceptional bacteria content. But ban did not remain long in effect. the investigation of the governm authorities progressed, it seems t they found the cheese was not blame for the spread of disease, now the ban is a thing of the past. the new and victorious armies America are again eating cheese w out restrictions.

HIS BOY

SOME fathers, here on Mayville Road, have trouble with their sons;
The youngsters want to leave the nest—that's how th' story runs.
I know a lot of them that went—they liked th' city plan;
They wanted life and fun and sport to match th' other man.
But I've been lucky with my boy—he never asked to go;
He sort o' loves th' humble place where crops and blessings grow.

It's part of him, this patient way, of liking home an' me;
And there's his mother! Dotes on her, like flower to a bee.
I guess he'd rather have her kiss when night-time comes along,
Than all the avenues of light, their laughter, and their song.
That's something I could never get—how boys could go away
And leave a little mother, there, whose locks were turnin' gray.

This lad of mine is fond of plows, of silos, and th' herd,
He'll spend an hour down th' lane with any singin' bird.
The open fields are sweet to him—the clover a bouquet;
His chariot or coach-in-four, a wagon-load of hay.
And, all the while, I hear him croon contented little songs
That make me think th' heart of him to me and ma belongs.

We go for walks through pastures fair, festooned with apple trees;
Just him an' me, without a word, th' clover to our knees.
And I can tell, by how he looks and how he holds his head
And how he breathes th' clean, pure air, the boy is country-bred.
He loves th' dignity of soil—the splendor of th' hills,
Th' music that is only found where there are mountain rills.

But, best of all, the mother love—that keeps him always true:
He folds her in his strong, young arms, th' same as sweethearts do,
And kisses her, and pats her head, and smiles across at me,
As if to say: "I love her, too, and claim my share, you see!"
Some fathers, here on Mayville Road, have trouble with their sons;
The youngsters want to leave the nest—that's how th' story runs.

Oregon State Dairy Council

HOARD'S DAIRYMAN:—The da cow as "queen of patriotic worke is being exploited in Oregon. stands with new dignity for she rivaling Mary Pickford and Cha Chaplin in the publicity she is gett

The Oregon Dairy Council ha been in existence long but it is do things. The dairy situation reached such a serious stage in gon that something had to hap and so a short time ago a few dea and producers in various lines of industry met with representatives the Food Administration, the S Dairy and Food Commission, Bureau of Health, and Oregon A cultural College and formed council.

First on the program there c the educational campaign. The pe had been cutting down on the us milk to such an alarming degree the health of the children of the s was endangered. Oregon has a h health standard and an exceedi low infant mortality rate. It was purpose of the council to keep standard high and that death low.

Headquarters were secured and publicity commenced. The co-opera of the Food Administration, of schools of the city of Portland, librarians, the home economics te ers, the women's committee of Council of National Defense, and Parent-Teacher Associations was cured and this co-operation was just "talk". It was real, active, ea help. Everyone "got busy". Wise such as Professor E. V. McCollu Johns Hopkins University, He Hoover, and others, were quote showing that milk is absol necessary as an important part o diet. Specialists were referred t showing that diseases of va kinds attacked the children wh not have sufficient milk. The co begged the people not to cut dow milk order but to increase it and told the reasons why and told the plain language.

Then it was shown how, even a advanced price, milk is cheaper any other food in point of nutri Then came the arguments that why the herds of Oregon mus saved from slaughter. The p commenced to think as they neve before. Milk all of a sudden bega assume a new importance. Ever talked milk and dairies. Before had said, "The price of milk is g up. We'll cut it out. The milkmen profiteers." They had never stopp see the milkman's side of question. They didn't think of high wages he had to pay his he the immense price he had to pa feed.

The dairymen who had been sla tering his cows did some thin too. He stopped and listened. caught a vision of the millions of

Milepost in Guernsey Progress

E. A. ONSRUD, NEW HAMPSHIRE

RNSEY Day, as celebrated by e New York State Guernsey lers' Association at Tarbell s, New York, September 4, is a ct feature in Guernsey develop- circles, the effects of which are asurable. New York is one of eading Guernsey centers in the ry. Since the first introduction e breed to America, the Guernsey held a strong foothold in this and today there are within its daries more than 1,500 pure-bred nsey bulls owned and used by en- astic and prosperous breeders. ng these are some of the most l bulls of the breed, and hun- of the smaller herds have the l of these sires. Splendid produc- records such as those of Lang- r Nancy and Linden Girl of Har- Hill 3d are constantly attracting ttention of the Guernsey world. vancement has been the slogan e state association and with the nce of a hard working and ca- executive board this keynote is transformed into action. Two annu- nter meetings are each year, one at ell in connection the Farmers' Week he other in differ- parts of the state. e meetings are red by lectures talks by special- nd leading breed- In addition, annu- summer meetings held at the farm s of leading lers, where op- nities are given member and vis- to see what the fellow is doing. No argument can be offered at the winter ing is so effective in demon- ing the merits of the Guern- as a look at a good Guern- erd and a personal talk between ler and prospective breeder. In summer of 1917, the New breeders were fortunate to be tained by C. H. Mackey, Har- Hill Farm, the home of Imp. er's Galore and his famous hters. They were no less royally tained this summer by Gage E. ell, a breeder who can show, bly as no other Guernsey breed- the state, the results of almost n years of selection and consist- reeding.

ests began arriving before ten k in the morning and spent the noon in looking over the many ings stabling the pure-bred nseys, Percherons, Berkshires, he immense flock of poultry. The buildings are large, yet not massive, but conspicuous for their roominess, simplicity, and convenient arrangements.

After enjoying the appetizing family dinner, the members and visitors adjourned to the lot near the barn where seats had been constructed for the comfort of the guests.

Mr. Tarbell has studied Guernsey breeding just as he studied business methods in the financial world. He found that the selection of a sire was a tremendously serious step that required study and a look into the future. He selected Golden Secret of Pencoyd 23462, a true aristocrat in the dairy world, a son of Imp. Golden Secret 12599, out of Rose of Pencoyd 27300. Imp. Golden Secret is the sire of twelve Advanced Register daughters, among which is Nella Jay 3d 35082 that made 809.38 lbs. butterfat in class A. Rose of Pencoyd 27300 has three records, the highest of which is 865.72 lbs. butterfat in class A. She is a half sister to Nella Jay 4th 38233 by Imp. Golden Secret of Lilyvale 10028, which is by Imp. Golden Secret 12599. Golden Secret of Pencoyd 23462 traces four times to May Rose 2d 3251 P. S. Mr. Tarbell pinned his faith in this bull. He knew that a flock of white sheep will occasionally produce a black lamb; he knew that the records of the daughters would be the only absolute proof of the merits of the sire, but the new bull was full of promise.

Four years have passed since this selection was made. No time could be more opportune for Mr. Tarbell to entertain Guernsey enthusiasts. When the thirty daughters of Pencoyd's Golden Secret of Pencoyd 23462 were led into the ring, the visitors knew that there probably was no other Guernsey herd in the state that could exhibit as many daughters from one bull. They were shown the results of four years of consistent breeding and the faith in a sire.

THE TARBELL FARMS, NEW YORK, WHERE THE PICNIC WAS HELD

The daughters were marked for uniformly open ribbing, great length between the hip and rib, and for their straight backs. According to the barn records, the five daughters that have been tested exceed the production of their dams at corresponding ages by sixteen per cent and others are on test making very creditable records.

When Golden Secret of Pencoyd 23462 was shown with his son and grandson, Golden Secret of Tarbell Farms 36146 and Golden Secret of Tarbell Farms 2d, there was presented a splendid demonstration of transmission of type. The oldest bull is about six years old, the second about three, but the grandson is only a calf about four months old. All these have good length, depth, spring of rib, and quality. The two older bulls may probably be criticized for being a trifle small, but many breeders claim that quality is of greater importance than size, and these bulls have quality. Major Galore of Harbor Hill 47978 was added to the group and applause was elicited from the spectators.

Ten groups of cows, consisting of some of the foundation animals and their progeny, were next led before the visitors. The procession had been so planned out beforehand that the cattle were led into the ring from one door and led out through another one, and a continuous procession was thus kept up without any delay or interruption.

The groups were headed by Village Uter 32774 and her daughters, Village Uter 2d 59363 and Village Uter 3d 83365. Village Uter 32774 has records of 358.62 and 607.93 lbs. butterfat made at the ages of three and one-half years and five years respectively, and under retest has made 13,454.2 lbs. milk and 596.27 lbs. butterfat in 263 days. Village Uter 2d 59363 has a record of 8761.5 lbs. milk and 455.57 lbs. butterfat in class G.

The next group consisted of Village Evette 32773 and her two sons, Golden Secret of Tarbell Farms 36146 and Golden Pencoyd Secret of Tarbell Farms. Village Evette 32773 is a half sister to Village Uter 32774 and has three splendid records, the last being 13,314.2 lbs. milk and 680.87 lbs. butterfat in class A.

Among the other cows shown with their progeny were Quercus Maid 25643 with 428.30 and 697.95 lbs. butterfat in class G and class A respectively; Lisbeth of Tarbell Farms 50182, now under test and in 115 days has made 4,335.10 lbs. milk and 239.78 lbs. butterfat in class C; Imp. May Blossom of the Isle 49274, a daughter of Governor of the Chene 1297 P. S., with 9,252 lbs. milk and 506.87 lbs. butterfat in class B, carrying a calf 249 days of her testing period; Tarbell Farms Marjery 37954, with 399.78 and 586.35 lbs. butterfat at the ages of two and four and one-half years respectively. With the last group was shown the magnificent silver trophy, the Follyland cup, that was awarded by the New York State Guernsey Breeders' Association to Mr. Tarbell for the record made by Tarbell Farms Marjery 37954, the championship butterfat production in class B for the year 1917.

The last group consisted of ten members of the Clover Leaf of Charlton family.

The famous bull, Roy of Norwood 8141, a son of Strong Anchor 5849, that formerly headed the Tarbell Farms herd was represented by ten of

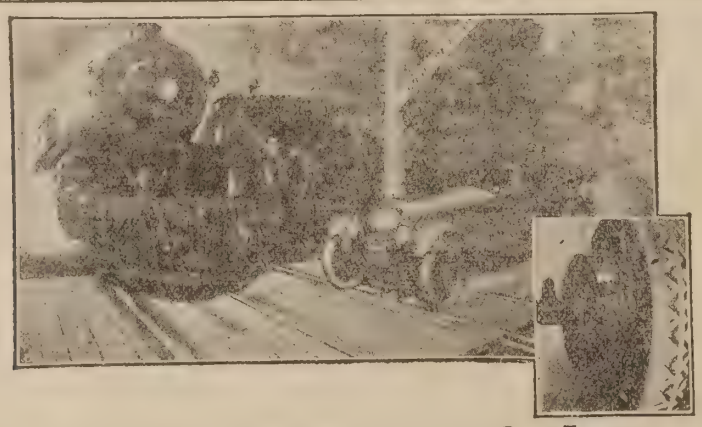
Babcock Milk Tester Complete $12.00

Any Cow Owner Can Make Accurate Milk Tests With the Efficient and Simple Crepaco Babcock Milk Tester

There is nothing intricate about it—operated by hand. There is a size for every dairy, from the 2 bottle tester to the large size with 24 bottle capacity.



This tester is noiseless in operation, the high speed being attained without unnecessary friction, by means of a spur and worm gear with cut teeth. The full instructions which are supplied with each machine tell you how to make accurate milk tests.

Crepaco Babcock Tester complete with glassware as illustrated above—six bottle capacity costs only $12.00.

We have Babcock Testers as small as the 2 bottle size costing $4.25 complete with glassware.

Our big Dairy Catalog describes fully, all size Milk Testers and other appliances of value to the dairyman. Write for it TODAY.

THE CREAMERY PACKAGE MANUFACTURING CO.

The worst season of the year for automobile accidents

SEPTEMBER and October are the worst months of the year for automobile accidents. Here is the reason. All summer long you have been running your car. Naturally the brakes are worn. Then there comes an emergency when you must stop quickly—*but you find you can't.*

That is what is happening to so many motorists this month. That is what may happen to you.

Have your dealer inspect your brakes today

If they need relining have him put on Thermoid Hydraulic Compressed Brake Lining. Thermoid gives greatest security for three reasons.

1st—Contains over 40% more material and 60% more labor than ordinary woven brake lining.

2nd—It is Grapnalized, a special exclusive process which enables Thermoid to resist moisture, oil and gasoline.

3rd—Thermoid is Hydraulic Compressed. It wears down slowly and can be used until cardboard thin. Support the Brake Inspection Movement and have your brakes inspected today. Our Guarantee: *Thermoid will make good—or WE WILL.*

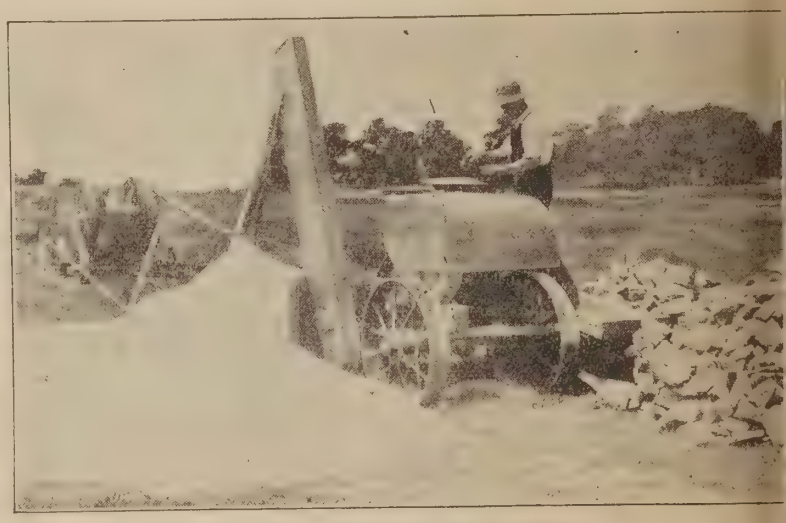
The Why, When, and Where of Acid Soils and Liming

(Continued from page 439)

oats and corn, although they contain high amounts of lime. This is because their root systems have very strong feeding powers and hence are able to extract the lime they need even though the soil is quite acid and low in available lime. The oat plant is low in lime and has very strong feeding powers. It grows much better on acid soils than barley which is higher in lime and has weaker feeding powers. A liberal supply of lime is necessary to make good barley soil.



From what has been said it is apparent that whether or not a plant is directly affected by an acid soil condition depends on three factors: namely, (1) the lime content of the plant, (2) the rate of growth of the plant, and (3) the feeding power of the plant. The higher the first two factors are, the greater the need of lime and the more the effect of the acid condition. The third factor works in the opposite direction, that is, the stronger the feeding power the less is the effect of the acidity. The combined effect of all three factors determines what may be called a plant's lime requirement. If the lime requirement of a plant is high, then it is greatly affected by an acid soil condition. Alfalfa has a higher lime requirement than red clover and hence is more sensitive to soil acidity. Most of our principal legumes have quite high lime requirements. Since the successful growth of legumes is absolutely necessary to keep up the nitrogen and humus content of our soils, the importance of liming acid soils cannot be over emphasized.

The growth and multiplication of the legume bacteria and in fact all desirable soil bacteria is affected unfavorably by a lack of available lime and other bases due to an acid condition. A good supply of lime insures successful inoculation and nodule development of the legumes. It also makes the nitrogen, phosphorus, and potassium of soils more available. It favors early maturity, hardiness, and freedom from disease injury. It helps to prevent lodging of grain. Lime improves the physical condition of both heavy clay soils and sands by making the clays more open and workable and the sands more compact. An abundance of lime prevents the accumulation of soluble toxic or poisonous substances in soils. Lime is really the great regulator of soil fertility.

There are only a few cases where an excess of lime may be detrimental. Potato scab and possibly a root disease of tobacco are favored by a large excess of lime. When the potato s and root disease of tobacco are lo erly controlled, lime increases the r duction of both. Of the garden c the watermelon is the only impo one that usually grows better o acid soil. This may again be d plant diseases which live in thes and are favored by lime.

How Test for Soil Acidity and Need of Lime?

Since soil acidity indicates a due to a lack of lime, the test fo acidity tells whether or not lim needed. The litmus paper test been used a great deal in the pas this testing. To make this test, litmus paper is placed in close co with the moist soil and left ther five to ten minutes. If the paper t red the soil is acid. The great tr with the litmus paper test is th does not tell how acid the soil is hence how badly or how much li needed. When soils are only sli acid the results are often confu and unsatisfactory. The paper be handled with great care an fades when exposed to the light. bonic acid which is always prese

A PORTABLE LIMESTONE GRINDER

In localities where limestone is abundant, this product may be furnished to the farmer for a reasonable sum if, say, five or six co-operate in purchasing a machine fo crushing limestone and sell the limestone to the farmers. In many instances th freight rates are prohibitive, and it is only wise for farmers to form co-operative so cieties for the purpose of supplying themselves with ground limestone. It may be sai that there are conditions where it is cheaper for the farmer to purchase lime alread for use rather than to prepare it himself.

soils and is beneficial rather harmful may also affect the test.

A test has been devised by the er which indicates definitely wh or not a soil is acid and also i how acid the soil is and how lime should be applied. This t described fully in Bulletin 249 Wisconsin Agricultural Exper Station. The test is made with a ple apparatus which can be ca right into the field. Many c agents, teachers of agriculture in schools, farmers, and others inte in agriculture have purchased th paratus and are testing soils. If county agent is not equipp make the test, send about on cupful of your soil to Departm Soils, College of Agriculture, Ma Wis., and it will be tested fr charge. Samples of soil are bes by parcels post in clean paper wrapped in paper, or else in cloth sacks.

In taking this sample select a erage spot of a few square rod take from this small area a littl face soil from five or six pla that they will make altogether a ple of about one-half cupful. field varies widely in fertility pography, it is best to take seve tirely separate samples from di parts of the field. If part of th is high land and part low land, arate sample should be taken both places, and in no case shou soil from high land be mixed wi from low land in making up a

ı, as the results then will not mean ıything. Samples from different fıds should never be mixed. Different ırts of the same field and especially ıe different fields on the same farm ten vary greatly in acidity. Always ıst your soil before applying lime beıuse some soils do not need liming. is very profitable to put lime on id soils, but a waste of time and ıney to put it on soils that are not id.

ıw Much Lime Per Acre Should the Farmer Use?

The agricultural use of lime must considered as an investment on ıich the farmer is justified in excting a profitable return, and hence e rate of application should be such at the highest return may be sered for the money available for instment. The rate of application hich will give the most desirable net turn will depend upon the quality ıd total cost of the material applied, .e degree of acidity of the soil, the op to be grown, and the general ferlity and value of the land.

In the following outline there is incated in a general way the amounts lime which it is desirable to use unır different conditions. If lime is apıied in the rotation for clover and y beans as indicated, the other crops a general farm rotation will be lequately supplied. Alfalfa, sugar ets, canning peas, and many garden ops have a higher lime requirement ıan clover and other general farm ops. If a soil is acid, but otherwise a high state of fertility, it makes ossible the growth of a more vigorıs plant than on a poor acid soil. The ore vigorous plant is able to extract ınsiderable lime from even an acid ıil and hence the fairly fertile acid ils do not respond as much to liming s the poor ones. The more fertile id soils also, still contain more lime ıan the poor acid soils. Poor sandy ils when acid always respond most arkedly to liming.

The following amounts of ground mestone per acre are average applitions for the conditions indicated. urned lime should be used in onealf these amounts.

For Clover and Soy Beans			
egree of cidity*	Soils of poor fertility	Soils of medium fertility and cropped at least 10 to 20 years	Soils of high fertility and comparatively new ones of medium fertility
ery slight	1 ton	Usually not needed	Usually grow good crops of clover without the use of lime. If acidity is medium or strong lime will be beneficial.
ight	1½ tons	1 ton	
edium	2 tons	1½ tons	
rong	2½ tons	2 tons	
ery strong	3 tons	2½ tons	

or Alfalfa, Sugar Beets, Canning Peas and Garden Crops		
egree of acidity*	Soils of poor to medium fertility	Soils of very high fertility
ery slight	1 ton	May not be needed
ight	2 tons	1 ton
edium	3 tons	2 tons
rong	4 tons	3 tons
ery strong	Investigate carefully before seeding to alfalfa. If possible select less acid field.	4 tons

For method of determination see Bul. 249, Wis. Agr. Expt. Sta.

The question is often asked: "How ng will an application of lime last?" here is taken by crops and leaching rom 200 to 500 pounds of lime per cre annually. A ton will thus supply lime from four to ten years.

What Form of Lime is Best?

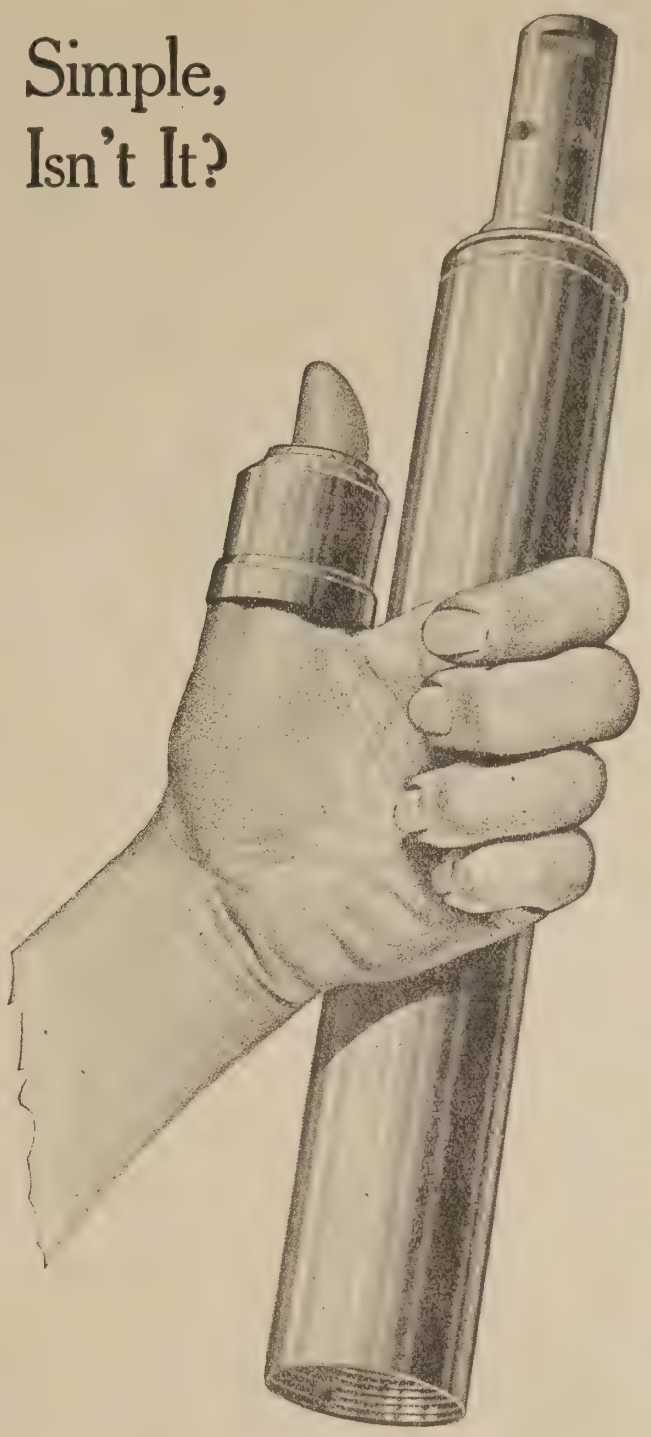
Pulverized limestone, marl, air laked lime, burned lime, and waste me of various kinds are on the maret and are used for correcting acid oils. These materials will neutralze the acids in a soil because they ontain either the free base lime, calium oxide, or else this same base comined with such a weak acid, caronic acid forming lime or calcium arbonate, that the soil acids can easly take the lime away and they themelves become neutralized or satisfied. This then allows the plants to get the ime they need. All except burned ime consist mostly of calcium carbonate. Gypsum or land plaster will not correct acid soils.

Burned lime is made by strongly heating ordinary lime rock so that the carbonic acid is driven out. When burned lime is used for acid soils it is first put in piles on the field and air slaked. By air slaking it again takes up carbonic acid from the air and forms the carbonate. The fresh burned lime is too caustic and difficult to spread without slaking. Fifty-six pounds of burned lime before slaking are equal to one hundred pounds of the pulverized limestone or carbonate. The carbonic acid which has no neutralizing power makes up the difference.

It should be noted that most of our pulverized limestones are really a mixture of calcium and magnesium carbonate and are sometimes called colomitic or magnesium limestones. This does not lower their value as the magnesium carbonate really has a little higher neutralizing power than the calcium carbonate.

Limestone should be pulverized to about the fineness of ground feed. Often it contains a little material that is about the size of kernels of wheat and corn. This is especially the case with the coarser grades and lime screening, resulting from the manufacture of road material. The fine material becomes available quickly. The coarser material furnishes a reserve that becomes available more slowly. The finer it is ground, the more quickly does it act. When ground very finely there is sometimes trouble due to blowing when it is applied. Good grades of ground limestone are now being manufactured by many firms and are on the market at a reasonable price. Small portable grinders are being operated by farmers to some extent in communities where limestone deposits exist.

There are large quantities of waste air slaked lime in certain places. Where this may be conveniently obtained in a fairly dry condition it is good material to use. Air slaked lime and burned lime are more soluble than ground limestone and hence act more rapidly.



The most profitable form of lime for a farmer to use depends sometimes on how far it has to be shipped or hauled. That which is nearest at hand at a reasonable price should be thoroughly investigated.

How and When Should Lime Be Applied?

Where only small amounts of lime are used it may be spread with a shovel from the wagon or from piles. By making a few calculations and measurements the lime can easily be put on at any desired rate per acre in this way. A manure spreader may also be used. A little straw or manure is first put into the spreader to close the cracks. Where considerable amounts of lime are used, it pays to get a special lime and fertilizer sower which makes uniform distribution possible with the least labor.

It is always best to apply lime on plowed land that has been harrowed at least once. It should then be thoroughly mixed into the soil by harrowing or otherwise working the soil. Lime may be applied at any stage in the rotation. It is usually applied at the time the land is prepared for crops that have high lime requirements, like alfalfa, clover, soy beans, sugar beets, canning peas, and barley. It is sometimes applied a year before these crops are planted in order to have the lime well mixed with the soil.

A question often asked is: "Can

lime be applied as a topdressing after the clover or alfalfa is up and growing?" Lime may be applied in this way, but it does not give as good results, by far, as when it is thoroughly worked into the soil. When lime is used as a topdressing, the more readily available, finely ground material or air slaked lime should be used. Topdressing works better on sandy soils than on clay soils because it works into the open, sandy soils more quickly.

A good time of the year to haul and apply lime is in the fall of the year. Waste air slaked lime can usually be obtained in better condition in the fall than at any other time. It may then be hauled conveniently when the roads are good and farm work is not so rushing. Some farmers find it convenient to haul their lime in the winter on sleighs. The use of lime on considerable areas entails considerable hauling and the farmer should plan to do this when it least interferes with other work. This should, however, not discourage the use of lime in the least. When a soil has become acid it is just as necessary to apply lime as it is to plow in order to get the best results.

What Results Do Farmers Get From Liming?

Where soils have become medium to strongly acid the use of lime has changed poor stands and even failures of alfalfa to excellent stands. Increases of 50% to 100% in the yields of alfalfa are common. Clover, canning peas, and soy beans yields have frequently been increased 50% and more by the use of lime. Barley has given very marked responses to the use of lime. The yields of corn, oats, wheat, and timothy have often been increased 25% to 50% and more through the use of lime in the rotation which has made it possible to build up the fertility of the soil by successful legume growing. Phosphate and potash fertilizers should be used with lime when needed. These fertilizers never give their full benefit on acid soils unless lime is added also.

There are some virgin or comparatively new soils and others which have received large amounts of manure, that are quite acid and yet they produce good crops of clover. Sometimes when these soils are limed there results little apparent benefit for a year or two. In the course of time lime always produces beneficial and profitable results on acid soils. An acid soil can never be brought to its highest state of fertility without the use of lime. When a soil has become acid, it has become "chronically sick", and one year is entirely inadequate to demonstrate the value of liming. Lime is the specific which always effects a sure cure, but the maximum benefit usually does not appear till the second or third year. It is the only material within the farmer's reach that will do this, and fortunately there exists in most states an absolutely inexhaustible supply of this precious material.

How Should the Farmer Proceed in Liming?

1. Have the county agent, experiment station, or someone test for acidity the soil that is to be put into alfalfa, clover, soy beans, canning peas, sugar beets, or other high lime requirement crop the coming year.

2. If the soil is acid order lime preferably this fall and apply it to the plowed ground. Otherwise, apply it early next spring.

3. Leave an unlimed strip and watch results continuously from year to year.

4. Use phosphate and potash fertilizer with lime where needed.

5. When time permits, have all the

With Concrete

You build once Only —Think of That!

¶ Fireproof, rotproof, ratproof, cycloneproof—no painting, no expensive upkeep, no insurance on the building—permanent.

¶ *We must stop waste*—waste of money, waste of labor, waste of transportation. *We can do it with concrete.* The bulk of materials required can usually be obtained on the farm or near by. Home labor can do the work.

¶ Granaries, silos, fruit and vegetable storage cellars, corncribs, milk, hog and poultry houses, hotbeds, cisterns, feeding and watering troughs or tanks, barns, all kinds of floors and pavements—any necesssary building or improvement you can think of—is most economically made with concrete, for *with concrete you build once only.*

Cold weather need not stop you.

Write for Bulletin 115, which will tell you what you can do with concrete in your spare hours this fall and winter.

is daughters and granddaughters. he members of this family are large, rong individuals, and all those in ilk are heavy producers. Seven of ie ten members shown have complet- l their Advanced Register records ith liberal margins above require- ents.

What in moving picture parlance is rmed the grand finale was the dis- ay of "a few head that are nice to ok at." This group consisted of venteen head, the pick of the Tar- ll Farms females.

Beauty was there, utility was evi- nt, quality and refinement were minent. The flowers were missing t the color was a clearly defined wn and white. It was truly an oc- sion for applause and the visitors d not lack appreciation.

Mr. C. H. Hechler of Harbor Hill arm gave an instructive address on uernsey breeding. Mr. Charles D. leveland, New Jersey, gave a demon- ration of the new score card adopt- l by the American Guernsey Cattle ub. Professor H. H. Wing of Cor- ll University urged the importance exhibiting at the local fairs for the rpose of increasing home markets. ie American Guernsey Cattle Club as represented by E. A. Onsrud, Pe- rboro, N. H., who told of the oppor- nities for spreading Guernsey inter- ts into the South Atlantic States.

Mr. Tarbell announced that he had cently sold to the American Live ock Company for export to Brazil, yearling Guernsey heifers and lls. This is the second sale this ar of pure-bred Guernseys to uth America that has been called our attention.

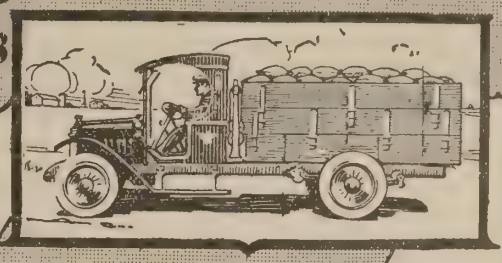
Mr. W. B. Jones, the president of e New York State Guernsey Breed- s' Association, presided at the meet- g. Mr. Frank M. Smith, the secre- ry of the association, was present d helped Mr. Tarbell and the offi- rs of the association to make the y a pleasant one for the visitors.

A hearty and unanimous vote of anks was extended to Mr. Tarbell r his hospitality and entertainment, ter which the meeting was declared journed. Expressions of satisfac- n and delight were common as the otor parties took their leave, many them having come from distances se to two hundred miles.

All in all, it was a most pleasant d instructive occasion, and surely milepost in New York Guernsey ogress.

Mother, to Thee!

and and salute when you see our bright flag!"
ou say to mothers of men.
they made that flag and they love it best,
or it means the most to them.
i- life-blood is dyed in the flag's bright red,
he white is their purity,
blue is the heaven of the homes they make,
nd theirs are the stars we see.
ght stars that mean sons who have gone abroad
o fight for our liberty;
l they cry aloud to fathers of men,
Hats off! Mother, to thee!"



nd and salute when you see a bright star
inned on a brave mother's breast,
hers is the honor, yet sacrifice,
nd she is the one we should bless.
gave up her son, the life of her life,
nd sent him across the sea,
fight for the flag and hasten the day
hen freedom for all shall be.
hers is a gift to all of mankind,
ith her love, for liberty;
n salute the flag and the service star,
ats off! Mother, to thee!

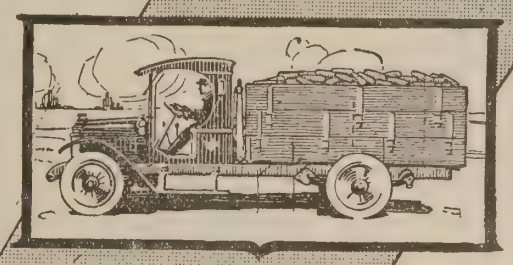
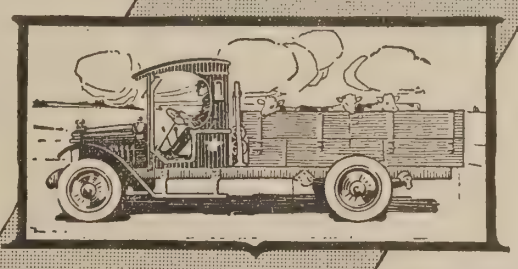
Patriot Farm Truck



Built for Country Roads
Built for Country Loads

The Farmer Wants a Truck That He Can Dump



An Iowa Farmer writes of the Patriot Truck:

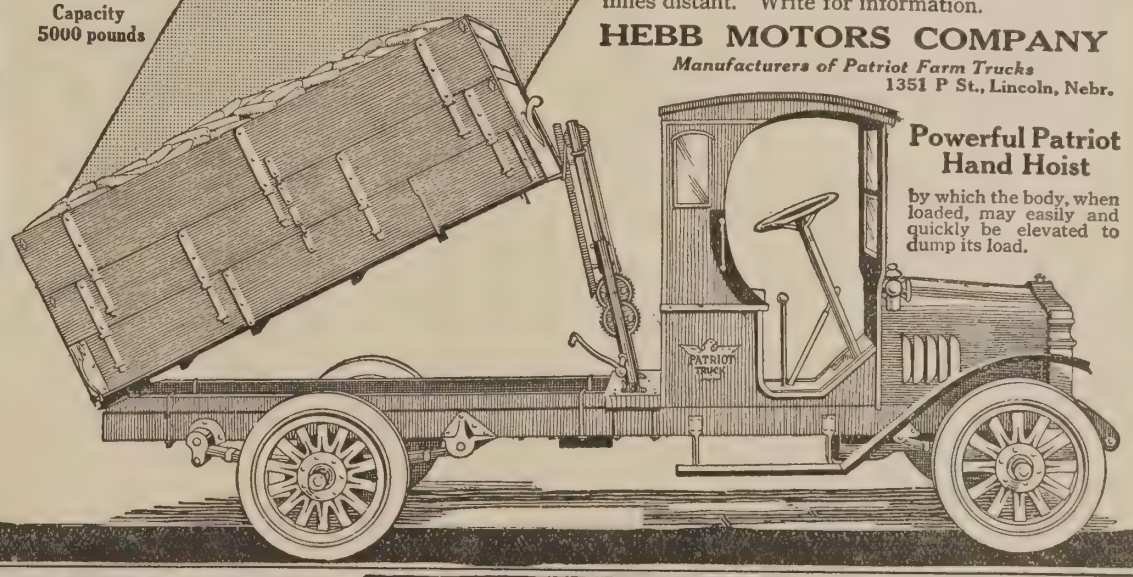
"You have got the right idea about dumping the load. It is what I have been looking for. The farmer wants a truck that he can dump at the country elevators."

The Patriot Dump Body, with the powerful Patriot Hand Hoist, makes it possible to easily and quickly dump the load by hand.

This Hoist is our own invention. The Body is built like a farm wagon body, except larger and better. It will stand long and hard wear.

Lincoln Model
Capacity
3000 pounds

Washington Model
Capacity
5000 pounds



The Patriot Saves and Serves

Saves time and expense in hauling the farm crops and in getting grain and live stock to market.

Serves the country by serving the farmer—giving him cheap, quick, certain transportation at all seasons of the year.

The Patriot is the first Motor Truck built especially for farmers. It saves horses and high-priced feed. It brings bigger and better markets within reach, for with a Patriot you can readily drive to a market 100 miles distant. Write for information.

HEBB MOTORS COMPANY
Manufacturers of Patriot Farm Trucks
1351 P St., Lincoln, Nebr.

Labor Conditions in the South

HOARD'S DAIRYMAN:—The present is a serious time in the history of dairying. With the new registering of males between 18 and 45 years it is likely to cut a wide swath in the ranks of farm labor.

Certain branches of labor have been placed in deferred classes and it is time that steps be taken to officially protect at least a competent milker to every 25 dairy cows that are in regular flow of milk and whose owner is commercially handling the product either by the manufacture of butter on his own premises or is daily shipping to a commercial creamery the cream from his herd.

The nervous, sensitive organization of the cow renders her peculiarly sensitive to any change in her administration and her best efforts in milk production are never attained if strangers are handling her or are in her immediate presence.

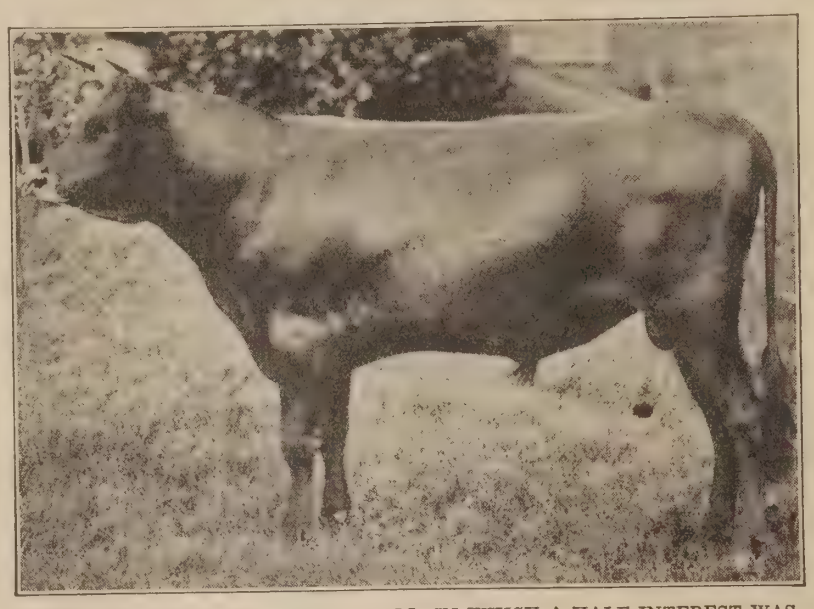
We in the South are in even worse state than you in the white belt. Dairying here is in its infancy in comparison and it is but recently that the process of milking has been performed by males.

The family cow has usually been milked by some negro woman when she happened to remember that the cow was to be milked, frequently but once a day, and then it was a catch-as-catch-can match between the woman and the calf, as they depended first on the calf calling the cow to the cow pen and its presence tugging at two of the teats to encourage a flow of milk while the milker worked on the opposite side for dear life to secure a small part of the lacteal fluid that was produced under such depressing circumstances.

With the advent of regular dairying the work was found to be unfit for the negro woman and was turned over to the negro man. It has been a man's job to educate him to a full sense of the responsibility that develops upon one who undertakes, at regular periods for feeding and milking, to get the full complement of milk.

With you every farmer's boy at some time or other has had to do with cows and it is largely a question of being willing, rather than of being able, to profitably handle the dairy cow.

I estimate that the average cow under best care will supply the needs of three persons in line of meat foods and butterfat. This is possible where the skimmilk is wisely converted into pork, beef, and poultry in combination with grains of various feeding values.



A dairy of 25 cows would then provide for the wants of 75 either at home or abroad fighting our battles.

Good milkers, like the poet, are born and not made. There must be those qualities of character that mean a gentle, firm, persistent trend of action, with patience unbounded and a love of his charges and his work, a pride that makes it possible by unbending interest to get all there is in the cow's make-up in line of milk.

We recently demonstrated the ill effects of a change in the dairy barn. A colored boy, who for two years had been doing our milking, was ordered to present himself to go with others to a training camp. So another man, accustomed in a family way to care for his own cow, was called in to take the place of the regular milker. The first morning there was a shrinkage of 6 lbs. of cream, and on the second morning the cream can showed a deficit of 11 lbs. from the usual average amount.

We feel that if Hoard's Dairyman should make a vigorous campaign looking to the exemption of at least one competent milker to every 25-cow dairy that the authorities would see that good business sense would be used and the exemption, or at least a deferred classification, be given that would allow time to effect a change with as little shock as possible to the sensibilities of the kine.

An Economical Way to Apply Lime

HOARD'S DAIRYMAN:— The need of lime on most of our farm lands is now universally recognized and every year an increasing number of farmers use this amendment. The problem of how best to apply it and where to apply it is constantly arising. Most lime is now applied in the form of raw ground limestone which can be mixed with any manure and with most other fertilizers without harm.

Probably the ideal method of application is to use a lime sower and apply the lime on freshly plowed or harrowed ground to be harrowed in. This work, however, is a somewhat long process when we carry it all through from the hauling of the lime to the field to the final sowing. The machine must be filled many times to cover an acre. This requires much driving either with the sower or with a wagon. The work must be done at the very busiest time of the year. At no time in the growing season is time of man and horse more valuable than just at this season when the soil is nearly prepared for planting. Often a delay of a day or two in planting will mean a large loss on the crop.

After several years of experience with various ways of applying lime we have adopted a method which seems to solve the difficulties better than any other. This is on a dairy farm where lime is applied for the sake of improving the new seeding and increasing the amount of legumes in the hay. Although we recognize that the ideal thing would be to apply lime at the time of seeding, yet the big aim is to get the lime on the soil. An application of lime lasts for many years and if we spread lime on corn land it surely will be there for the oats and grass seeding the next year, although it may not be of particular benefit to the corn. If lime is applied to new seeding in its first year or to other grass land it certainly will be of great benefit to the hay and will last long enough to improve the next seeding on that field.

Bearing these facts in mind, we have applied our lime entirely by mixing it with manure. As lime is drawn from the car it is stored in a bin, a pile, or an empty box-stall in the cow stable. If possible, it is placed near the door through which the manure will pass on its way out of the barn. Even when the stable is crowded with stock we have found no difficulty in finding a place for our lime pile. Ten tons of lime can be stored in a small pile. This lime is used every day after cleaning out the stables, to sprinkle in the bottom of the gutters and to sprinkle over the driveways. On the driveways the ground limestone tends to prevent cows and horses from slipping. It also covers over the wet spots where liquid manure has leaked out of the spreader on the floor. In this way the barn is kept looking and smelling much more sanitary. Each day when the driveway is swept, the lime applied the previous day is swept into the gutters. This together with the quantity applied directly in the gutters tends to absorb some of the liquid manure although it must be admitted that lime has no great absorbing power. In the gutter, however, it tends to keep down some odors and helps to make the barn appear more neat.

Under this plan a considerable amount of lime goes out with every load of manure. Our manure spreader is set for ten loads per acre. We wish to apply lime at the rate of 100 pounds per acre. To do this, it would be necessary to get about 100 pounds of lime on each load of manure. We can not quite use this amount in our gutters and on the driveway. Hence the lime pile is placed near the exit door of the stable. Every day as the load of manure goes by we stop near the lime pile and throw on top of our load two or three bucketfuls of lime. We have already computed roughly the amount used on the driveway and in gutters and try to add at this time enough more to make up our 100 pounds. The load now goes on the field, is spread by hand or by spreader and the lime is also spread evenly without extra work. By spring, we find that in addition to having a neat sanitary stable all winter the lime has all been applied to the soil without any appreciable extra effort. Although some of this lime may not be in the exact places where we would prefer to have it, yet we are systematically covering the entire crop area. After all, that is the big thing which we wish, to get the lime on the soil so that it may benefit the entire rotation.

We always keep in mind one precaution; while manuring ground for potatoes we cease to use lime in the stable for fear it may promote the development of potato scab.

New York. F. L. CLARK.

The cost of machinery and implements is constantly increasing. Prepare now to protect implements and machinery from exposure during the coming winter. As far as possible all implements should be placed under a dry shed. Woodwork should be painted and all exposed iron and steel parts should be either painted or covered with grease or oil to prevent rusting

Canadian Dairy Notes

F. E. ELLIS, ONTARIO

rop season is just about com-d and the dairymen are now tock of their position. Here in Ontario we have har-rops vested a record crop of all the coarse grains. najority of dairy farmers plan r the most of the grain end r rations, their good grain ill be a great help; particular-w of the continued scarcity of ncentrates and mill feeds. too, will be plentiful. Hay, nately, is a short crop and No. ow sells for $20 a ton on the market, the highest price in ears. The corn crop, on the and, promises to be the best three years in tonnage. The of silage is still a disputed Much of the seed corn was of outhern varieties not suitable Canadian climate and a large age of the crop would have most worthless had it not been long fall with frost well de-Even as it is, much silage will er "soft". One desirable les-least has been learned,—good rn will be held for a couple of n advance by thousands of who heretofore started to r seed a few weeks before g time. many of the colder sections. Western Canada, grain crops been a partial failure and in sections where the live stock y is well developed there is a ge of hay. The Federal and cial Departments of Agricul-ave made arrangements for hay brought from the stockless s to the stock and even to he stock to sections well sup-ith hay. It has been made an to burn a strawstack without al permit. It would be a shame drought of the past summer o give the western live stock y, and particularly the rapidly ing dairy industry, a setback. e of everything some breeding will be sacrificed, but only a ercentage of what was at first

has accentuated a problem that eginning to trouble the dairy acturers of Canada, even in the balmy days of peace. tory Problem Where is cheese fac-tory help to come Since August, 1914, several d young factory workers have the army and are now overseas. wages in munition factories all skilled trades have drawn le recruits for dairy work into other branches of industry. So serious has the factory help situation become, that the government has placed cheese factory and creamery help in the same class as farm labor, and young men drafted into the army but enjoying extended leave to help on the farms and in the factories have both had their leave extended until November 1st. This extension of leave has materially assisted in carrying through the work this year. But what are the factory men to do next year?

There seems to be only one solution of the problem. Butter and cheese making will have to be recognized as a skilled occupation requiring more than average intelligence and wages paid accordingly. This is especially true in the case of cheese factories. Farmers have been getting their work done for them altogether too cheaply. In many districts the cheese factories are numerous, small, and largely privately owned. Makers have all their capital invested in their plants. They can't afford to let go. The competition for milk has been such that making prices was forced down to a living wage scale or less and have stayed down. The Dairy Inspection Act, by requiring a high standard of excellence in factory conditions and output, has caused a considerable deduction in the number of factories, but competition is still keen enough to keep making prices down and make it impossible to pay assistants such wages as they can command elsewhere. Conditions, it seems, are going to force a change. The rate for cheese-making, which is on a pound basis, seems due to advance considerably.

Canada is just completing its fifth series of war-time fairs. In Eastern Canada the series opened with the Canadian National Exhibition at Toronto, which is the world's greatest annual fair with an annual attendance of almost 1,000,000 people. This was a fair which reflected Canada's war effort. War products were on exhibition all through the industrial section of the fair. Women were doing much of the fair work previously attended to by men. National service girls, in their khaki uniforms, were much in evidence on Women's Day, representatives of women's work on the land: National service boys, of whom there were 25,000 in Canada this year, were more numerously represented. Even more suggestive of war was the great number of men in uniform. They constituted a considerable percentage of every crowd and sadder still, as a reminder of the conflict across the ocean, were the boys on crutches, cheerful all of them, though terribly handicapped for life. And, right and properly, agriculture was emphasized more strongly than ever before in this series of war-time fairs. Fairs

JERSEY COWS IN MILK AT CANADIAN NATIONAL EXHIBITION. THE FIRST COW IS COWSLIP'S DUCHESS OF ST. PETER, WINNER OF THE CLASS.

It was expected that the great boom in beef cattle, which has been general all over Canada, would probably result in greatly increased exhibits of the beef breeds and at least some reduction in the showing of dairy cattle. Beef cattle were out strong all right, but there was no sign of decadence in the dairy section. There were as many animals out as ever and in many respects the dairy end of our fairs had a record year. At the National Exhibition, for instance, there were 278 entries in the Holstein classes and 22 exhibitors. In fact, this dairy breed was represented by more entries and more exhibitors than any other breed at the fair, either dairy or beef.

This entry of Holsteins constituted a record for the breed. They were 50 per cent more numerous than last year. The quality was wonderfully good. It is not many years since the Holstein classes at our fairs represented a variety of types, but this year the classes were wonderfully uniform and one might look down the line of 20 entries and not see a poor individual in the whole lot. Mr. W. S. Moscrip of Minnesota, who acted as judge, expressed high appreciation of the quality of the classes on which he passed. The grand champion bull was Bonerges Hartog, shown by M. H. Haley, and the grand champion female, Beauty Pietertje Mechthilde, exhibited by Diamond Bros.

Jerseys were second in respect to numbers and the showing was probably the best ever seen at the Canadian National Exhibition. The great herds of B. H. Bull & Son, A. T. Little, and R. J. Fleming strongly competed all the way through. A notable decision in this breed was the placing of Beauty Maid at the head of her class by Professor Van Pelt. Beauty Maid holds the four-year-old championship of Canada over all breeds for the production of butterfat and holds second place, any breed any age, of all cows entered in our Record of Performance. The judge's action in placing her at the head of a strong class would seem to indicate some relationship between type and production. B. H. Bull & Son, owners of Beauty Maid, were the heaviest winners, capturing two of the championships and the most of the group prizes.

Ayrshires at Toronto numbered only a few head over the century mark, the principal exhibitors being R. R. Ness, A. S. Turner and Sons, Hunter Bros., and Alex Hume and Co. The Ness herd was probably never stronger and his entries at Toronto will be seen at the National Dairy Show at Columbus this year. Competition was keen, however, and Hunter Bros. had the junior and grand champion male in their recently imported Lessnessock Bunty Lad and also the junior champion female in an imported heifer, Whitehill May Scott 4th. An interesting feature of the Ayrshire section is what is known as the Record of Performance classes. Animals entered in these classes must also have qualified in Record of Performance and they are judged by a score card, so many points being given for conformation and so many more for production.

What was true of Toronto was true of all of our other great eastern fairs. At London, Ottawa, and Sherbrooke the dairy sections were stronger than ever before and attracted fully as much interest from fair visitors. In Western Canada, where the popularity of the beef breeds and the emphasis placed on grain growing might have been expected to militant against a successful dairy season, the dairy classes were as strong as ever. In British Columbia, particularly at the Vancouver fair, were seen some of the strongest classes of dairy cattle exhibited at any of our Canadian fairs. In fact, this province promises to be, if we may judge by its fair exhibits, almost exclusively a dairy country.

The Canada Food Board has adopted drastic methods to get the supplies of butter needed to fulfill our overseas obligations. By authority of a recent order all creamery butter made in the provinces of Alberta, Saskatchewan, Manitoba, Ontario, and Quebec, between the 30th day of September and 9th day of November, will be commandeered for export. In the meantime domestic requirements will be met from butter in storage and from the dairy make. For the butter commandeered the dairy produce commission is paying 46½ cents a pound for finest, 46 cents for grade No. 2, and 45 cents for grade No. 3, delivered at the warehouse, Montreal, freight and cartage paid. Butter Commandeered

Canadian creamerymen are fearful of the effects of this order. One creameryman with whom I was speaking recently anticipated a boom in dairy butter with prices for it so high that the shipment of cream to the creameries would drop off with great injury to the creamery business and disappointment to the Dairy Produce Commission. A limiting factor in the price of dairy butter, however, is the fact that cold storage men are limited by law as to the profits which they can take from the creamery butter which they have in storage. Were dairy butter to get unduly expensive, creamery butter coming out of storage would curtail further price increases. With the price of all dairy feeds as high as they are, however, it would almost seem that no price to which dairy products can advance, would be unjustifiable.

The Dairy Produce Commission which has been buying all Canadian cheese this past season for 23 cents a pound alongside water Montreal, has now advanced the price to 25 cents per pound for all cheese purchased from the factories after Sept. 30. The Commission took this action in view of the recent general advance in the value of dairy products. Cheese factory patrons have not considered that the price paid this summer was high enough and the fact that the output of creamery butter has increased at the expense of the cheese output, would seem to indicate that the patrons were right.

Jersey Cattle Notes

For week ending Oct. 11, 1918:

Number of animals registered: Bulls, 199; cows, 588; total, 787. Number of transfers recorded: Bulls, 138; cows, 462, total, 600.

EDITORIAL COMMENT

A KANSAS City firm offers us delivered No. 1 alfalfa hay at $34 a ton and No. 1 timothy at $35 a ton. It's a fool market that will put such a valuation on these two hays. The alfalfa contains in actual feeding value for any animal, from the horse down to the pig, three times as much as the timothy. Of course, the quotation is governed by the judgment of the market but it is a fool judgment, nevertheless.

THE agricultural appropriation bill, which recently passed Congress, provides that animals reacting to the tuberculin test may be reshipped interstate; that is, if John Doe of New York buys an animal of John Brown of Pennsylvania and after holding it for 60 to 90 days retests and finds that the animal reacts, our federal government will permit John Doe to return the animal to John Brown. The Bureau of Animal Industry will set forth certain regulations governing the reshipment of an animal of this character.

Much hardship has come to the live stock interests because the federal laws did not permit the interstate shipment of reacting animals. Valuable breeding animals have been sacrificed because of this law and we are glad to see that Congress has made it possible to reship interstate animals reacting to the tuberculin test.

The agricultural appropriation bill provides that a sum of $500,000 may be devoted to bovine tuberculosis work throughout the United States. The government is systematically undertaking the eradication of tuberculosis in several states and this appropriation should encourage those who have already accepted the government's assistance in the eradication of tuberculosis.

COMPLAINTS have been made to the Wisconsin State Council of Defense to the effect that much transportation service could be saved if shipping zones were established for milk and cream. The federal authorities have advised that there is no authority in the food control bill for the enforcement of such regulations, and that the railroads themselves will not undertake to establish such shipping zones.

At a meeting of the agricultural advisory committee of the Wisconsin State Council of Defense, Chairman Buckstaff informed the committee of the action of the Oconomowoc local council, requesting that as far as possible the consumer buy his food products from local dealers. The farmers have been encouraged to have their wheat milled and consumed locally. The advisory committee unanimously passed a resolution endorsing the action of the Oconomowoc Council and directed that all county councils be urged to take similar action where conditions are applicable.

As a country, we have fallen into the bad habit of buying foodstuffs from long distances and have lost the art of preparing our own foods as our forefathers did. The shortage of transportation and the curtailment in the use of foods are teaching us valuable lessons. We will learn to be more resourceful and to use the foods grown in our community to better advantage.

Isn't it strange that it has taken a great world war to show the necessity of following some simple practice of securing and using foods that was so common to the pioneers of every state in our Union?

BUY MULES

Those farmers who have never had experience have little idea of the superiority of the mule for farm use over the horse. About eight years ago we made our first trial with a mule team on the Hoard's Dairyman Farm. This team weighed 2,700 lbs. and we paid $500 for them—just what we had previously paid for a fine team of grade Clyde mares weighing 1,600 lbs. each. We kept the mares two years and lost one of them by disease.

The farm required at least four good teams and sometimes five. We were so well pleased with the mules that we purchased, at the Chicago Stockyards, three more teams, all of which have been steadily on the job ever since. Not a day's sickness, always ready for either heavy or light work. What is especially valuable about the mule is that you can not founder him. Bring him in, hot and sweaty as he may be, he will not eat or drink till he is cooled off. Except in case of an accident to one, we have not called a veterinarian to look after them in eight years.

The mule is so superior in hardiness, in strength, in proportion to weight, and in possession of good sense that never forsakes him, that we wonder that more of our farmers do not use them. The mule carries his own insurance. If kindly and patiently treated, they are quick and willing workers. But care should be taken in the first place to get a team that is well broke and has been kindly used. They will last till they are twenty years old in active service. Besides all this, they will keep in good flesh and working condition on less feed than consumed by horses. So much for the mule.

PATRIOTIC DAIRYMEN

Dairy farmers, what do you think of this?

A woman, bearing considerable reputation as a welfare worker in her city, stated at a dairy conference:

"Dairy farmers should for patriotic reasons be willing to produce milk, butter, and cheese at a loss, for no product is so highly essential to the welfare of America as milk and its products. It would be better for you dairymen to produce dairy products at a loss than to buy bonds. The government could well relieve you from the responsibility of buying bonds."

Can you beat that reasoning? A great class of American citizens producing a product highly essential to the welfare of the country asked to carry on their business at a loss and to be relieved of participating in the purchase of bonds! We wondered as we heard this lady speak if she didn't appreciate that dairymen want to be full-fledged American citizens, that they desire to have their business conducted on the same principles as other industries, that they want to participate in the support of their government the same as other people.

There was a time when people living upon the farm expected no profit. They were practically slaves, but centuries have passed since that time and the American farmer desires to have his business conducted on the same basis now as other industries are carried on, and he desires to do his part in the same way that others do. Strange how these abnormal times bring forth ideas of feudalism.

LABOR IN THE SOUTH

Elsewhere in this issue of Hoard's Dairyman will be found a communication from Mr. S. M. Emery of Mississippi discussing the labor problem of the South and suggestions as to how some relief could be brought to the dairymen of that section.

We fully appreciate that the dairy farmers of this country are short of competent labor and that they and their families are working too hard because they cannot find an adequate supply of help. The conditions under which the dairy farmers find themselves are leading many to change their methods of operating their farms. In the South, particularly, labor has been used very wastefully. This condition came about because there was a surplus of labor and it was not necessary to lay plans for using it economically. Negro labor has not only been abundant, but cheap.

The southern farmer is brought face to face with new conditions, new problems, and a new system of operating his farm. In many ways the circumstances under which he finds himself is going to lead to a better system of agriculture and labor is going to be used to better advantage. Instead of a good, strong negro laborer using one mule, he will be using two and even three and four mules, because there is no excuse for a competent laborer doing one-half to one-third of what he is capable of, provided the right machinery is selected for doing the work on the farm.

We know of some dairy farmers in the South who hire negro women to do the milking. We have visited their farms and found these women giving excellent satisfaction. One dairyman who owns over 200 cows finds the negro woman more satisfactory as a milker than the average hired man of the North. Not only is it possible to get the negro woman to do milking but there is opportunity to purchase milking machines. Not only can the negro be taught to drive two or more mules, which means the use of larger agricultural implements in preparing the soil for seed, but the tractor can be also used advantageously in plowing and disking, as it can be used practically night and day in the rush season.

We are assured by Gen. Crowder that it is his desire not to disturb agricultural labor any more than is necessary, for he appreciates the importance of agriculture and that farm products cannot be produced without help. On the other hand, we are informed that they cannot build an army of boes and town loafers so they must reach out every branch of industry and take men who m needed in those industries but who are n more in the army.

The dairy farmer should make known to t cal exemption board his conditions so that it have opportunity to recommend to the di board what laborer or laborers should be plac the deferred classes and left to serve on the On the other hand, the dairy farmer shoul plans to use labor economically.

CO-OPERATION AND SUSPICI

Since the inception of Hoard's Dairyma have pointed out to farmers the benefits of erative effort, and have urged them to org for the purpose of not only preparing their ucts for the market, but for purchasing feed other things needed in the operation of farms. We sometimes get discouraged to not little headway that has been made and espe to find that there are altogether too many co nities unable to work together.

In a recent report from one of the cow te this statement was made: "Some feed has bought co-operatively, but the farmers seem suspicious of one another and such movemer not bring the results generally expected." not fully understand why farmers should b picious of one another or why they can not organizations to prepare their own product market and place themselves in a position cure the full market price for their products.

It is a tremendous advantage to them to b position to buy feeds in carload lots. In s instances, communities have bought enough co-operatively and have saved more than e to pay all expenses connected with having herds tested. If the farmers could but real their greatest power for securing the large turns for their products and puchasing wha need to the best advantage lies in working tog but jealousy and suspicion have in too ma stances kept them apart and made them ar prey for organized industry. We have point many times of late what has been accomp where farmers have pooled their interests a cured capable leadership, and it seems to u no community of dairy farmers should be w organization and weapons to protect their

One of the causes for much of the trouble has taken place in the marketing of milk for consumption, is due to the fact that the f has permitted the creamery and cheese fact pass out of his hands, and he has no other for his milk but the city market. If there located in every community, where four hundred farmers are shipping their milk, equipped plant which could take care of th should the prices offered for it not be suf then there would be less need for milk co sions and less grievance upon the part farmer, because he would be master of hi product.

There is no law that can compel a farmer duce milk for the city consumer, but with plant for turning the milk into butter, che other dairy products, the farmers are at the of those who purchase their milk. We look the controversy between the milk produce the distributor as only a temporary incide we believe that in the near future the farme see what they should do in order to meet ot ganized industries upon a business basis. N ty will force them to lay aside their jealou suspicion of one another and organize milk through which they can control their own p and market it upon a business basis.

ALFALFA AND SILAGE

Dairy farmers well supplied with alfalf and corn silage can provide a most admira tion for their cows. They are in position lize the feeds which can be purchased most ably. Alfalfa hay not only supplies an ad amount of protein, from which the cow ma tures the casein of milk, but also supplies m matter which is highly essential to proper and health. There are no two feeds which ment each other more completely than alfal silage. The silage furnishes the carbohydrat succulence, and the bulk which is so highly able for dairy cows. What the silage lacks, falfa supplements.

To gain the best results, some grain sh

th these two excellent roughages. At times the prices of feeds are relatively higher dairy products the feeder may well con- s cows to nothing but alfalfa hay and silage. esent, the prices of feeds and dairy products bout in the same proportion as they have n other years.

e it is well not only from a production stand- but from the standpoint of keeping the cows d physical condition, sustaining their milk and producing strong, healthy calves, we advise the feeding of some meal mixtures. efer to use at least three kinds of feeds if an be obtained at reasonable prices. This es good variety and at the same time assures eder of supplying the animals with all the nts of nutrition necessary for the manufac- f milk, for the growing of the fetus, and for g them in good physical condition. These feeds should consist of those palatable and ous and rather rich in carbohydrates. There be no objection to using some feeds rich in n, but a pound or two per day per animal be all that is necessary to use with feeds like l barley, rye, or corn, which may be termed aceous feeds, in order to supply the proper hment for a cow to do good work.

Phosphatic Fertilizers

tural Phosphates. There are two general s of phosphates—the bones of dead animals, ertain phosphate-containing minerals which briefly considered.

bone meal is made by grinding raw bones to ler, and the finer it is the more valuable the t. This substance contains about 22 per f phosphoric acid and 4 per cent of nitrogen. ones contain a small quantity of fat as well, s this prevents rapid decay of the bone, the oric acid and nitrogen in the meal are some- lowly available to the crop.

med bone meal. Most of the bone meal sold present time is made from bones previously d to remove the fat, and a part of the nitro- mpounds. The fat is used in making soap e nitrogen in glue and gelatins. Steamed ontains from 28 to 30 per cent of phosphoric nd about 1½ per cent of nitrogen. The d bones can be ground to a much finer pow- d the removal of the fat causes them to de- ore rapidly so that they must be considered valuable source of phosphoric acid than the nes.

kage is an important source of phosphoric the so-called animal fertilizers. When the t contains a very large proportion of bone it etimes designated as bone tankage, and may n from 7 to 18 per cent of phosphoric acid.

e black or animal charcoal is made by heat- ne in air-tight vessels until all the volatile is driven off, and is used in the refineries to sugar. After it has become spent or useless refiner it is sold for use as a fertilizer. Bone contains from 32 to 36 per cent of phosphor- l.

eral phosphates. In a number of places rock ts are found that contain varying percen- of phosphate of lime. These phosphates are y named after the place where they are ob- , as, Carolina phosphates, Florida phos- , and Tennessee phosphates. These rocks n from 18 to 32 per cent of phosphoric acid, ffer from the bone products in that they are mineral substances and contain no organic matter. Ground into a fine powder they are sometimes sold under the name of floats, but the rock phosphates are used only to a limited extent in the crude condition.

Superphosphates or manufactured phosphates. The phosphoric acid in all of the natural phosphates described is combined with lime in a form that is extremely insoluble in water. In order to make the phosphate soluble it is sometimes treated with sulphuric acid which unites with part of the lime, leaving a phosphate which contains only one-third as much lime as the natural phosphate and which is soluble in water. The lime and sulphuric acid make a compound which is the same as that found in gypsum or land plaster. This combination of soluble phosphate and gypsum, made by treating the natural phosphates with acid, is called by the various names of superphosphate, soluble phosphate, acid phosphate, acidulated rock, etc. For its manufacture the rock phosphates are generally employed both because they are cheaper and because the organic matter in the bones interferes with the use of sufficient acid to make all the phosphate soluble. A good sample of superphosphate or acidulated rock contains about 16 per cent of phosphoric acid in a form that is soluble in water.

Sometimes when insufficient acid has been used a part of the soluble phosphate will change into a form intermediate in solubility between the natural phosphate and the acid phosphate, and the phosphate is said to have undergone reversion, and the new compound is called reverted phosphate. The latter product is supposed to be more available to the plant than the insoluble or natural phosphate, hence, the soluble and reverted phosphoric acid taken together are known as the available phosphoric acid.

In some instances bone meal is treated with a limited amount of sulphuric acid and the product is called acidulated bone. This substance contains a much smaller proportion of its phosphoric acid in the soluble form than does the rock superphosphate. When soluble phosphates are added to the soil they soon combine with the mineral matter, and are converted first into the reverted phosphate, and finally into the insoluble form such as is found naturally in the soil. In this way the phosphoric acid is fixed and there is no danger of its being lost by leaching.

Relative value of phosphate fertilizers. The soluble phosphate present in the acidulated goods is generally considered the most valuable form of phosphoric acid for use as a fertilizer. At first sight it seems useless to go to the expense of making the phosphate soluble when it is again rendered insoluble by the soil before the plant can make use of it. The real object in making it soluble is to aid in its distribution in the soil. When an insoluble phosphate is applied it remains where it falls except for the slight distribution it receives by cultivation. In the case of soluble phosphate, on the other hand, the phosphate dissolves in the soil water and is widely distributed before it becomes fixed by the soil. In the former case the roots must go to the phosphate while in the latter the phosphate is carried to the roots. It follows from what has been said that after the soluble phosphate is distributed throughout the soil the individual particles must be very much smaller than is the case with the insoluble phosphate.

There are some soils upon which the super-phosphates cannot be used without injury, usually those that are deficient in lime; the superphosphate in such cases having a tendency to make them acid. Indeed, it is even asserted that soils containing an abundance of lime in the beginning may be made acid by the continued use of superphosphate if no lime is added.

When the natural phosphates alone are considered there is no doubt that the preference should be given to those derived from bones. The organic matter present in the bones decays when it is incorporated with the soil, and this process doubtless causes the phosphate to become more readily available to the plant, while the rock phosphate on the contrary is very slowly decomposed. The degree of fineness to which bone meal or mineral phosphate is ground is of prime importance. Very fine bone meal is much more available than that which is coarser and is always rated at a higher price a ton."

A Virginia Ration—Lice

I have on hand 150 bus. of rye, that at present time there is no sale for at all, 130 tons of exceptionally rich silage, 15 tons of first class clover hay, and very little corn but think that could be bought for eight or nine dollars a barrel. I can also get all the wheat bran I need for $38 per ton. I don't know the present price of cottonseed. Under these conditions what do you think would make my cheapest and best balanced ration? I milk from fifteen to twenty cows.

My young heifers are kept in a good house with stanchions and cement floor but for the past two winters they have been full of lice. Is there anything I can do to prevent its occurrence this year? The stable was whitewashed with lime and carbolic acid last summer but that didn't seem to help any.
Brisbow, Va. C. C. L.

We suggest giving each animal about 30 lbs. of corn silage daily and it may be advisable to feed a little more. In connection with this, feed all the clover hay each cow will consume without waste. If there is not enough clover hay to carry the herd through the winter on this allowance, we would suggest the use of a little other roughage, such as corn stover or oat straw, in order to make it last. If there is sufficient clover hay, we would not feed any oat straw.

A mixture consisting of 300 lbs. ground rye, 300 lbs. bran, and 100 lbs. cottonseed meal will supplement the roughage very well. Feed about 1 pound of this mixture for each 3½ to 4 lbs. of milk produced. If barley can be obtained we would suggest feeding some. If not, perhaps our correspondent could purchase a carload and resell a portion of it to his neighbors. We have a very large crop in this state and it is selling around $1.00 per bushel, making barley one of the cheapest feeds. It is nearly equal to corn in feeding value and is much cheaper.

The Bureau of Animal Industry suggests the following treatment for lice:

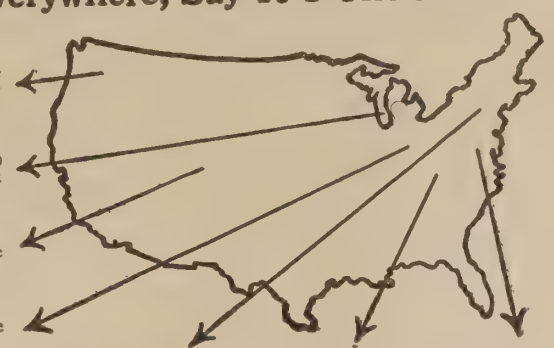
"Cattle infested with lice should be dipped in the spring and again in the fall, using a cresol or nicotine dip, or Beaumont oil emulsion. The arsenical dip is also another remedy which may be effectively used against lice. When possible a second dipping should be given after the lapse of 10 to 14 days, and in some cases several treatments may be necessary before the lice are brought under control. The dips mentioned are, as a rule, more efficacious against lice than lime-sulphur dip. Though lime-sulphur is an excellent mange remedy, it is less satisfactory for lice, especially blue lice. If only a few cattle are to be treated the dip may be applied with a brush or cloth, or with a small spray pump, or a mixture of one-half pint kerosene and one pound lard may be smeared on the body."

Ration With Velvet Bean Meal

Please tell me how to mix a feed with oat hulls, $26.50 per ton; cottonseed meal, $56.50; sweet feed, $50.00; velvet bean meal, $46.00. Cows have been milking since spring and will not freshen until late. Do you think cottonseed meal the best feed at $56.50 or velvet bean at $46.00? Have silage and some pea hay; also have some gluten on hand.
Rainer, Tenn. G. F. B.

Feed each cow daily about 30 lbs. of silage; some will require a little more, others a little less. Also, feed all the pea hay they will consume without waste. If there is not enough pea hay to feed liberally throughout the winter and until grass comes again, we would feed less, and give some other less desirable roughage to supplement it.

A mixture consisting of 300 lbs. velvet bean meal, 200 lbs. gluten feed, and 100 lbs. cottonseed meal will supplement the roughage very well. Feed about 1 pound of this mixture for each 3½ to 4 lbs. of milk produced. We may state that this mixture is a little heavy and also richer in protein than necessary for the animal's needs, but we believe these feeds will provide about the cheapest and best combination that can be made of those mentioned. It is our opinion that it would be wise to feed this mixture on top of the silage.



Oat hulls at $26.50 a ton are too expensive to use. Oat hulls are a little better than oat straw for nourishing a cow. In other words, it requires nearly as much energy to digest and assimilate the oat hulls as they furnish to the animal. If they could be purchased at one-half of the price stated, it might be that a pound or two could be used for lightening the meal portion of the ration, but when feeds of a higher nutritive content can be obtained, we would not feed any of the hulls.

The velvet bean meal furnishes total nutrients, that is, protein, carbohydrates, and fat, at about 3c a pound, while in the cottonseed meal it costs about 3.4c. Cottonseed meal furnishes protein at about 7.6c, while the velvet bean meal costs about 15c. If protein were the main element to consider in building this ration, cottonseed meal would be cheaper, but on total nutrients velvet bean meal is a little cheaper.

Universal natural milker

Alternates, Like Milking With Hands

Farmers, Everywhere, Say It's The Best

From Washington
"It is so much better than the ---------- Machine, I am ordering two more Universal Milkers"

From Michigan
"We are milking 12 cows in 20 minutes—and get more milk than by hand"

From Colorado
"It is the best milker on the market"

From Ohio
"No other machine on the market can equal it"

From Vermont
"It is the best machine on the market"

From West Va.
"It is giving excellent satisfaction and does all you claim"

From N. Y.
"One man milks three times as many cows as by hand, and easier. No trouble breaking cows"

Better For Cow—Better For You

There is no question about the supreme superiority of the Universal Milking Machine—the only question is, how soon will *you* adopt this time- and labor-saving method?

The Universal is a great benefit for the cow—it always milks the cow the same way—its alternating action (massaging two teats while milking two others), stimulates the flow of milk and affords a comforting relaxation.

The Universal rubber-lined teat cup fits all cows, no bother, no adjustments, and one Universal lasts a lifetime. Write us.

Hundreds of other farmers find true satisfaction and genuine economy in the Universal. Why not you?

Put Universal to work on your farm today. Increase your profits.

See our nearest dealer or write us for catalog.

"Mother-that's the greatest light I ever saw"—

said Tom, just home on furlough—

"We had Quick-Lite Lanterns in the trenches"

The Coleman Quick-Lite Lamps and Lanterns mark the farthest advance in the development of artificial lighting. Make and burn own gas from common gasoline. Give remarkably brilliant white light, without glare or flicker—steady, soft, mellow. *Save the eyes* and simplify your work.

No trouble to care for, no bother with daily cleaning, no chimneys to smoke or break. No wicks to trim. No odor, no soot, no dirt or trouble. No delay hunting around for a torch. Just hold a lighted match under the patented coil, and directly you have an astonishingly brilliant light, more powerful than electricity, more light than 20 coal oil lamps or lanterns would give, cheaper to use than all others, and absolutely safe.

Dairying on the Boom in Southern Indiana

Bank Deposits Increased More Than Fifty Per Cent in One County

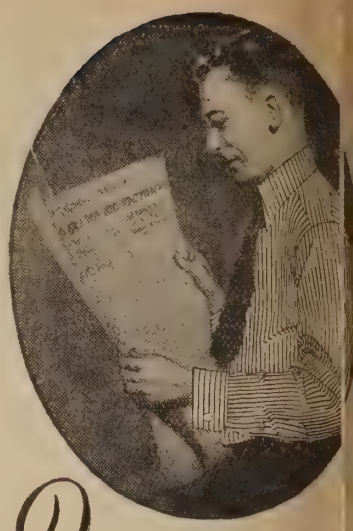
HOARD'S DAIRYMAN:—Five years ago agriculture in many sections of Southern Indiana was at a low ebb. Large sections of it are very rough and broken and through a system of continuous grain farming the fertility of the soil has been depleted. Today an entirely different story is told of these same sections, and it seems that each county, even the poorest one, is racing with its neighbors on the road to prosperity.

For example, in one of the counties where the statistics have been very carefully tabulated the deposits of the four county banks have increased more than three hundred thousand dollars, or more than fifty per cent. All of this is due to an organized effort to establish a system of dairy farming on these farms. Quoting from the report of the local or county Jersey Cattle Club we have an accurate account of the wonderful progress that has been made:

"The start was made with no silos, no more than one or two cream separators in the county, no dairying other than the selling of a little surplus farm butter, no more than twelve head of registered dairy cattle, no alfalfa, no soy beans, no Japan clover, no sweet clover, no application of limestone to the soil and no farm records kept by the farmers.

"There is now a striking contrast to these conditions. One hundred and fifty or more silos can be found and to this number from seventy to one hundred will be added this summer. About two hundred cream separators are in use. Farmers are successfully and profitably growing alfalfa and other legume crops; more than two thousand tons of limestone will be applied to the soil during the coming year and some farm records are being kept to show how the money comes, how it goes, and how the leaks can be stopped.

"What the dairy cow has done is indicated by the value of the cream that has been shipped from the five railroad stations in the county. Every can of cream that has left the county from the railroad stations has been traced, and its capacity and value have been determined with all transportations charges accounted for."



Value of the Cream Shipped From the County	
1913	$621.12
1914	2132.10
1915	4788.00
1916	25116.48
1917	68910.36

"With the coming of the cow the hog business has advanced with a bound as is shown in the record of the carload shipment from the county seat town.

July 1912		June 1913	-	6 cars
" 1913	-	" 1914	-	3 "
" 1914	-	" 1915	-	6 "
" 1915	-	" 1916	-	14 "
" 1916	-	" 1917	-	24 "

Southern Indiana Dairy Convention

It is easy to see that the farmers in these southern sections are keeping more and more dairy cows on their land and they are making an effort to practice improved methods. They have called a dairy convention to be held at Seymour Oct. 30 to Nov. 1st, where railroad facilities make it easy to reach from most of the southern half. At this convention they will solve many labor, feed, and management problems that are bothering us all. Labor saving devices, results of feeding experiments and improved methods of operation will be strong features of the convention. Some of the best talent in the country will be there to discuss the problems. They have arranged for a sale of dairy cat-

Indiana. W. O. MILLS.

To the Farmers of America

Three million American boys on the battlefields in France, in the cantonments on this side, and on our great ships everywhere are fighting the battle for Democracy.

Back of them is another army—the splendid, untiring men and women on the farms of America, who have taken up the additional burden laid upon them by the absence of many of their boys, and by their toil and sacrifice have produced the crops that today are helping to feed the allied world. From you, who are soldiers of that army, every patriotic call has had an unhesitating and united response.

Today in the name of the president of the United States another call is sent to you on behalf of your sons and brothers. They are far away from their own homes, yet through the generosity of the American people the influence of the homes which they have left still follows them. Seven great organizations have taken it upon themselves to do for the boys in camp and at the front the things which every parent would wish to do for them if he could.

These seven agencies are the Y. M. C. A., Y. W. C. A., National Catholic War Council, Jewish Welfare Board, War Camp Community Service, American Library Association, and the Salvation Army. Together these splendid societies represent every one of the best elements in our American life. Their huts are the soldier's church, his college, his library, his club, his theatre, and his gymnasium.

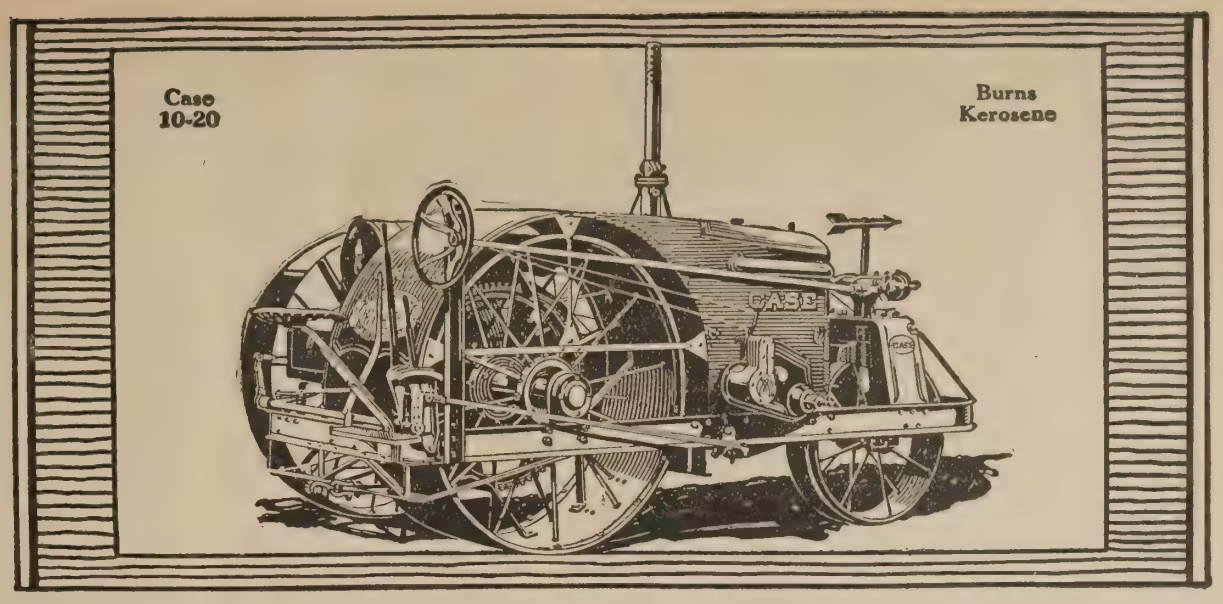
To provide this comfort, to make the American home follow the American flag, requires money in large amounts. These seven agencies will need more than one hundred and seventy millions to push their work forward through the forthcoming months. And because their work is done in the same spirit, and for the same great end, they have wisely agreed to make their appeal to the public not separately, but together.

That appeal, which will be made you in the week of November 11-18, will offer the American people one of the most splendid opportunities of the war to signal across the seas their united support of the boys who are fighting there. The cause is great; the total amount asked for is great; but not greater than the patriotism of the American farmers. Every house that flies a service flag will have a special interest in the success of that campaign. For every dollar means cheer and comfort to the son of such a house.

On behalf of the Administration I send you this great call. But more particularly on behalf of the boys themselves. In the chill and damp of those French villages they are waiting for your answer—waiting for you to say to them: "No matter how great the sum, we promise that you shall have the comforts of life over there. The success of this United War Work Campaign is tho proof that we are standing shoulder to shoulder behind you."—D. F. HOUSTON, Secretary of Agriculture.

Sylvanite Guernseys Sold

The demand for good Guernseys still holds strong if we may judge from the recent sale of Sylvanite Guernseys held at Baraboo, Wis., Oct. 4. Although a small sale and with no very high prices, a very satisfactory average of $265 was obtained.



J. E. Mack and J. R. Love did the selling.

A list of animals sold, prices, and buyers follow:

Wichern Bros., Wisconsin	
Bravo of Rich Neck 4th	$150
Nancy of Sylvanite	185
Phoebe of Sylvanite	165
Froome's Queen of Sylvanite	195

Ready for Immediate Delivery

TO supply a limited number of hurry-up calls for tractors to put to work at once, we offer this Case 10-20.

We do not know how long our supply will last, but those we have will be distributed as fast as transportation facilities can bring them.

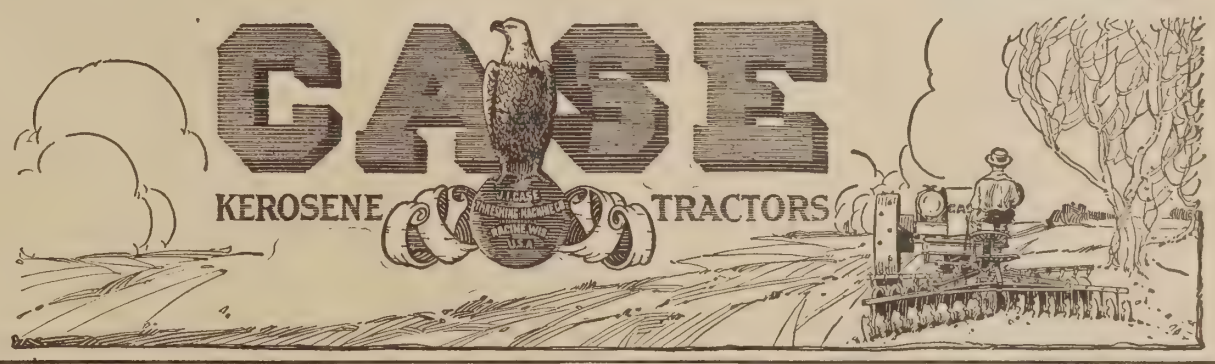
Thus you are able, if you act at once, to obtain a well-known, tried machine, of which there are thousands in daily use all over the country.

We have built this 10-20 since 1914 and farmers everywhere attest to its economy and dependability.

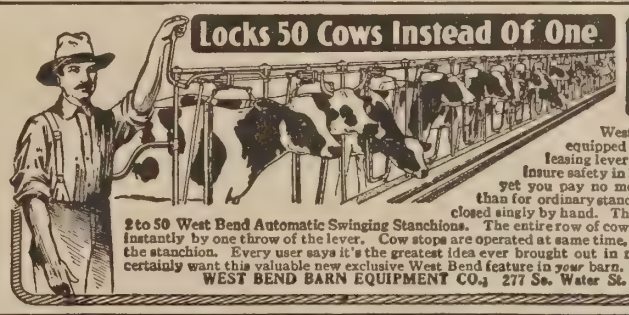
This 10-20 has plenty of reserve power. Its rated pull of 1,650 pounds on the drawbar can be increased to 2,600 pounds. It pulls three plows anywhere a good team can pull one plow continuously.

Its design and hitch is such that all side draft—so common in most 3-plow tractors—is avoided. All wheels run on unplowed ground—the combined tire width is 32 inches.

It has a 4-cylinder Case motor, with removable head. It is equipped with a Case-Sylphon Thermostat which insures complete combustion of kerosene at all loads. And it has a Case air washer, which prevents dust and grit from entering the cylinders.



Examination of this 10-20 will disclose its splendid design and workmanship. As you go over its specifications and illustrated description you are certain to agree with the thousands of owners that this tractor is 100 per cent efficient.



Write for our catalog. Or obtain it from a Case Dealer.

And if you are interested in the immediate delivery of this Case 10-20, place your order at once, so as to avoid disappointment.

Champion
Dependable Spark Plugs

Big Increase in Porcelain Efficiency

2½ Times the Resistance to Breakage from Shock

HOW to make porcelain for spark plug insulation, offer greater resistance to shock and vibration!

Ten years of original research work and the three-thousand-four-hundred-and-fiftieth experiment, revealed the secret.

Champion 3450 Porcelain offers two and a half times the resistance to shock and vibration compared with the best previous Champion porcelain.

What an increase in that dependability which has given Champions their enormous prestige.

See that the name Champion *is on the porcelain* of the plugs that serve your motor as well as on the box. There is a Champion Spark Plug for every type of motor car, motor truck, tractor, motorcycle and stationary engine.

Seven Times More Food Value

"Yes, I bought all the Liberty Bonds that I could carry. And I've found a way to pay for them out of *extra* earnings and at the same time help folks Hooverize: I make my skim into delicious cottage cheese and pack it in

KLEEN KUP

The Package of Quality for Foods of Quality

Government experts say that skimmed milk furnishes seven times as much actual human food when made into cottage cheese as it does if fed to live stock. My customers are very glad to get it on meatless days—and other days, too.

"I use Kleen Kup packages also for my private brand of butter and for farm-made buttermilk. They are neat, convenient, inexpensive. I'd hardly know how to run a dairy without Kleen Kup."

You, too, can increase your dairy profits by the use of Kleen Kup packages. Let us show you how. A postal will bring samples, selling helps and the Kleen Kup story. Write today.

Co-operation and a New Agriculture

(Continued from first page.)

What are some of the results already gained by the dairy organization? The dairyman naturally thinks first of the financial results. Taking the League and the New York City market again as an example, the average price paid by the dealers for the ten years preceding October 1, 1916 was $1.48 per hundred pounds. For the two years since the League has determined the price, it has averaged $2.52 per hundred. Due to war conditions there would have been some increase probably without organization but after having attended price conferences with the dealers and heard the prices offered by them, prices they would have paid had there been no organization, the writer believes and all members of the League believe that there would have been very little increase given by the dealers if there had been no organization.

For the first time in years thousands of farmers are beginning to realize what it is to get at least cost of production for their milk. Volumes could be written on what these better prices are going to mean in increased prosperity in rural life. Bitter, grinding poverty is an enemy to all progress. Moderate prosperity—an honest return for honest labor—will mean a better social life, better education for the children, and a broad-minded rural people who will in all truth be the backbone of the country.

A Sorry Independence

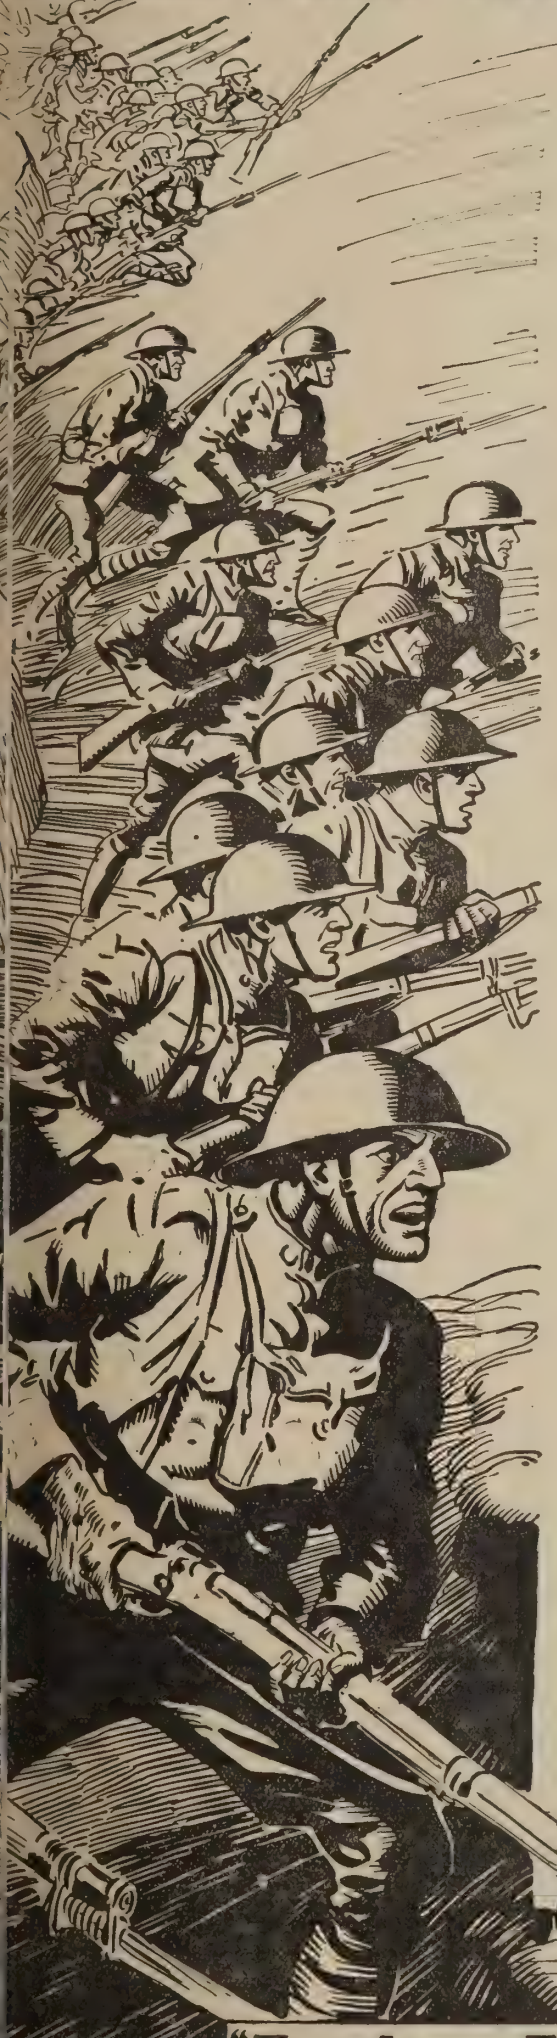
Much is said about the independence of the farmer, but before he organized, the dairy farmer had little independence. He sold his product for whatever the dealer wanted to pay and he bought his supplies for whatever another set of dealers wanted to ask. At contract time he could sign the contract, all the terms of which were written by the dealer, or he had no market for his product. Since 1916, however, this condition has been exactly reversed. The farmers' organization makes the contract for the sale of milk and the dealer agrees to it or he gets no milk.

The League office receives letters in every mail from enthusiastic members telling of the results of organization. Here are a few quotations taken at random from hundreds of such letters on file:

"First, and greatest of all, I would say that the League has emancipated us from a condition of slavery that was humiliating, and has given us self-respect. Where before we felt helpless and subservient to the dealers, we now feel independent and confident that we can act on business principles that permit any manufacturer to fix the selling price of his product in accordance with the cost of production."

Co-operation Leads to Real Independence

"To change the attitude of the farmer from one of the most strenuous competition in the sale of milk and potatoes and apples and all other farm produce to the attitude of co-operation in the sale of milk and other farm products, has been a long step and is a greater change than most of us realize even now.



"It means turning squarely around and helping each other to greater prosperity instead of selfishly grabbing what we can for ourselves and letting the other fellow look out for himself."

"Two years ago this was a cream community. I had just moved into the neighborhood and sent for one year and found I could not make it pay sending cream. A neighbor and I at

Order Spring Fertilizers Shipped *NOW*

A War-time Measure and a Patriotic Duty

FOOD will be needed next year more than ever. Fertilizer ***must*** be used to produce it.

Fertilizer factories have lost 30 to 40 per cent of their labor. Fertilizer production can be maintained ***only*** by utilizing the remaining labor to the fullest possible advantage.

Fertilizer must be shipped as soon as ready. Double and triple handling must be eliminated. Factories, with their depleted forces, must operate every day and ship every day from now on until Spring—if the supply of fertilizer is to even approach the demand.

Fertilizer must move steadily from factory to farm throughout the Fall and Winter to replace the usual Springtime rush. In no other way can the situation be met.

You gave up wheat, economized on sugar, observed heatless Mondays and gasless Sundays.

These were *War Measures*.

Now order your Spring fertilizer shipped at once. It is a *War Measure* and a Patriotic Duty.

Do your share again. Get your Spring fertilizer in your own barn NOW. Place your order TODAY.

"Fertilizer Feeds the Crops that Feed the World"

WAUKESHA COUNTY

Holstein Breeders' Association Sale

November 12-13, 1918

125 PURE-BRED HOLSTEINS 125

The Offerings Include:—The five highest record serviceable bulls for sale in the county. All with records of above 30 lbs. 15 other well bred bulls.

70 choice young cows from 2 to 7 years old with records up to 30 lbs. and bred to 30-lb. bulls to freshen this fall.

Our sales have always contained high class animals. We can truthfully say that the quality, both as to breeding and individuality, surpasses that of any previous sale.

REMEMBER:—All animals of breeding age are guaranteed to be breeders. All animals are tuberculin tested and from tuberculin tested herds. Each animal is inspected for fitness prior to sale.

This is a Breeders' Sale. Watch for announcement next issue.

Waukesha County Holstein Breeders' Assn.
Waukesha, Wisconsin.

MILK ..... and WAR TIME

In these days of high prices for dairy products, the "poor milker" is more than ever a liability.

But before you sell the cow that is not producing well, try to improve her condition. Her milk value is much greater than her meat value.

Most poor milkers are non-productive because of some defect of health, which can be quickly remedied by intelligent treatment.

Kow-Kure is a medicine that acts quickly on the organs of digestion and milk production. Its widely known tonic and curative qualities have made it the standard cow medicine for the prevention of disease and the treatment of Abortion, Barrenness, Retained Afterbirth, Scouring, Lost Appetite and Bunches.

Give Kow-Kure a trial; it will do for you what it is doing for thousands of others. Feed dealers and druggists sell Kow-Kure; 60c and $1.20 packages. Send for **free** treatise, "The Home Cow Doctor."

After Calving

Every Cow Should be Treated With

Hood Farm Breeding Powder

It cleanses, disinfects, causes the cow to clean quickly and breed readily. It is a safeguard against Abortion, there is less use of the bull, and calves are stronger.

We quote what Mr. H. F. Weaver, of Millard, Wis., says:

"I have used your Breeding Powder for about four years with very good success. I think if every dairyman made a practice of injecting every cow three or four times after calving there would be very few barren cows."

Treatment of all cows with Hood Farm Breeding Powder is the most profitable and economical thing you can do.

Mail an order today, mentioning this paper.

Prices, prepaid, $1.15, $2.75 and $5.00. Flexible Injection Tube, by mail, 90c. Mammoth size Breeding Powder and Tube, prepaid, $5.75.

Association Notes

Arkansas Valley, Colorado:—One concrete, one underground, and two hollow tile silos have been constructed by our members this fall. One more barn has been fitted with a milking machine, which makes 10 of our herds now milked by machinery. In September market milk sold for $2.92 per hundred pounds. The average test required was 3.5 per cent and for each point above, 3c were paid. The prices of feed are: alfalfa hay, $20 per ton; corn silage, $8; barley, $2.75 per cwt.; and cottonseed meal, $3.15.

Second Lake County, Illinois:—With the busy season and shortage of help, some of the herds were slightly neglected for this month and a decrease in production followed. With the exception of one or two members, who have sold most of their cows, our members are planning to reorganize for another year. Market milk sold for $2.92 per hundred pounds, the average test required being 3.5 per cent. Prices of feed are: Unicorn, $67; Special Dairy, $46; Schumacher, $56; bran, $38; oil meal, $60; oats, 75c per bushel; and barley, 86c.

Pioneer, Minnesota:—The creamery paid 56c per pound for fat during the past month. Milk retails for 10c per quart and butter for 64c per pound. Prices of feed are: pasture, $1 to $2; hay, $8 to $12; silage, $4; bran, $31; oats, $34; barley, $35; and oil meal, $60.

Middlesex—Somerset, New Jersey:—Five boarders have been sold and three pure-bred heifers and cows purchased. In September market milk sold for $2.90 per hundred pounds, the average test required being 3 per cent and for each point above, 4 cents were paid. Milk retails for 14 to 16 cents per quart and butter for 65 to 70 cents per pound. Prices of feed are: Cypho Feed, $60; Dairymen's League, $64; oats, 65c per bushel; corn, $1.85; dried brewers grains, $70 per ton; beet pulp, $55 to $60; cottonseed meal, $65; Larro, $64; linseed meal, $65; gluten, $65 to $75; alfalfa hay, $35; and clover, $20 to $25.

Some of the herds complete their year's work with the Septemb Good records have been made which are the following: A fi old pure-bred Holstein, owned E. Stricker, has produced 11, milk containing 377.5 lbs. fa garet Beauty, a seven-year-old by C. M. Quick, has produced lbs. milk containing 400.3 lbs nine months; Queen Segis C a five-year-old owned by J. D has produced 12,110 lbs. milk ing 366.9 lbs. fat; Queen pia, a three-year-old owned Quick, has produced 11,070 l containing 385.5 lbs. fat; a gr stein, owned by W. D. Jelli produced 9,106 lbs. milk co 310.5 lbs. fat.

Clark—Harrison, Indiana:—month of September we ha cows in the 50-lb. class and si 40-lb. One member has 8 cow list of the ten highest produc he has put them there very la cause he feeds more heavily other members in the ass Prices of feed are: Homin $66 per ton; bran, $48; and seed meal, $60.

Stillaquamish, Washington-results are noticed from th good bulls by all of the ass The older cows that have m records are being sold and spring of a better breeding ing their places. In Septembe milk sold for $3.35 per pounds. The average test r quired was 3.7 per cent. series paid $3.10 per hundre for milk and the creamery, pound fat. Milk retails for ter for 58c per pound, and c 34c per pound.

Rice and Cedar Lake, Wisc Fifteen low producers will for beef. One new separator installed to take the place of er. There are 27 silos in the tion which have been filled w crop of corn and give promis good records next winter. I market milk sold in this co for $4 per hundred poun creamery paid 50c per poun and the cheese factory, 63c retails for 50c per pound a for 28c. Prices of feed are: bran, $33; ground oats, $40 lage, $5.

First Lake County, Illino pure-bred bulls purchased t others of poorer breeding. I ber market milk brought 3.5 per cent, with 4 cents for higher tests. Creamery per pound fat, with butter at 67 cents.

BULL CALF

Dam's Record (3 yr.) 23.63 lbs.
Sire's Dam's Record 34.56 lbs.
Seven Dams Average 29 lbs.

Calf born April 6th, 1918. Fine individual, beautifully marked. Write for photo and full pedigree. Delivered express prepaid any point in U. S. A. Price $250.00.

Lovell Hutchen's Guernsey

Dispersion Sale

Fort Atkinson, Wis.

Friday, Nov. 8, '18

Having decided to quit farming I am placing my entire herd of richly bred Guernseys on the market.

There are eighteen registered animals in the herd whose breeding represents some of the best blood of the breed.

Two of this number are daughters of the great show bull, *Lord Mar*, one of the greatest bred bulls that Mr. W. W. Marsh, the breed's greatest breeder and importer, ever owned.

Well bred herd sires have always been used to head this herd. Such sires as Skidoo of Folly Farm, who traces to the noted sire, Benjamin and Hambros Prince, who traces directly to Dolly Dimple and Langwater Hayes Rosie, have left their mark in the herd.

To the breeder who is in a position to do official testing here is an excellent opportunity to buy Guernseys whose breeding is practically a guarantee that they are capable of making good on test. Our cattle have been well grown and are splendid individuals. In fact they are just ready to make some one a big profit who is in a position to develop them.

All farm equipment necessary for running a medium sized farm will also be sold. Our farm is midway between Fort Atkinson and Whitewater on the Whitewater road.

Lovell Hutchens, Prop.,
Fort Atkinson, Wis.

Gleim Bros'. Consignment Sale

Oelwein, Iowa, Wednesday, OCT. 30, 1918

50 HEAD 50

Some rare animals will be sold in this sale, including the daughter of a 30-lb. daughter of Homestead Jr. DeKol. An especial feature of the sale will be the dispersion of the herd of W. D. Hostrop of Riceville. The females in this herd are bred to a 25-lb. grandson of Rag Apple Korndyke 8th.

Sale is the day following the Perrin & Curtis sale at Allison, both places being on the Chi., Gt. Western R.R., and easily accessible.

For further information and catalog, address **HARRIE W. GLEIM, Arlington, Iowa**

Walworth County

HOLSTEIN SALE

Elkhorn, Wis.

Thursday, Nov. 7, '18

75 Head of Registered HOLSTEINS 75

consigned by the breeders of Walworth County will constitute the offering.

This is to be strictly a breeders' sale where the choicest animals from the best Holstein herds in Walworth county are to be consigned.

It is always a source of great satisfaction for the prospective purchaser *to know* that every animal in a sale is backed up by a reliable breeder. That this sale is backed by the progressive breeders in the community for the best interests of the breed cannot be questioned. The Holstein Breeders' Sale is based identically on this policy. Among the animals consigned there are grand individual A. R. O. cows and dams of A. R. O. animals. Some of these cows are bred to such bulls as King Pontiac of Brothertown whose dam is a twice 32-lb. cow and whose two nearest dams average 38.53 lbs. A beautiful daughter of King Segis Pontiac as well as a daughter of Iowana Sir Ollie, one of Wisconsin's best show bulls are consigned from one of the leading herds in the state. Also a number of very milky females bred to a 28.60-lb. grandson of King of the Pontiacs and out of a 28.60-lb. granddaughter of King Segis, will be in the sale.
The sale will be held in the new Stock Judging Pavilion recently erected at the fair grounds in Elkhorn.

For further particulars address

John G. Voss, Elkhorn, Wis.
Sale Manager.

HOARD'S DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

The Herd Bull

"The sire is half the herd." You have heard that said many times and it certainly is true, but did you ever stop to think why, and what it means to your father's dairy herd? The sire is responsible for at least part of the good and bad qualities of every calf that is born in the herd. He is the sire of all of them. Each cow is, on the other hand, the dam of only one calf.

Does that mean anything to you, a junior dairyman? Certainly it means that a good bull at the head of your father's herd is absolutely necessary; he can't afford anything else. The only way we can improve our dairy cattle is to raise heifer calves that will prove better than their dams. That's the way your father works to improve his herd, but he can not do it unless he has a first class bull to sire those calves.

Just what is a good herd sire? First of all, it is a pure-bred of the breed to which the cows belong, whether they are pure-breds or grades. You must understand that hundreds of years ago there were no real dairy cows such as we have today, cows capable of producing from 5,000 to 20,000 lbs. or more of milk in a single year. Men have succeeded in getting cows to produce heavily only by careful breeding,—using sires from the very best producing ancestry. A pure-bred bull is a descendant of a long line of cattle that have been bred for production. A grade bull or a scrub bull is not, and if your father was to use a grade or a scrub bull, he would be going backward. Instead of getting heifer calves that would be as good or better producers than their dams, they would undoubtedly prove to be poorer producers.

Of course, your father is not in this class, but there are dairymen and plenty of them, too, who are using grade bulls. More than that, a good many of them live in communities where they have a chance to buy pure-breds. Anyone certainly is a poor business man to buy a grade bull simply because it costs $25 or $50 less than a pure-bred bull. He loses more than that on his first crop of heifer calves.

Nor is it enough to simply have a pure-bred bull. Get a good pure-bred bull, one that is backed by several generations of good producers and one that is, moreover, of the right type. It may take a little time and trouble and cost a few extra dollars to buy such an animal, but it's time and money well spent.

In his book on "Dairy Cattle and Milk Production," Professor Eckles gives several illustrations of the results obtained by using good and poor herd sires in the University of Missouri Jersey herd. The first bull they used left 4 daughters in the herd. Milk records were kept on these four for a total of 26 lactation periods and on their dams for 23 periods. Here is what the records show:

	Dams	Daughters
Average milk yield, lbs.	5,380	4,381
Average % fat	4.35	4.95
Average yield of fat, lbs.	234	216

A later sire used was Lorne of Meridale. He left 12 daughters in the herd with records for 67 lactation periods, from dams with records for 66 lactation periods as follows:

	Dams	Daughters
Average milk yield, lbs.	4,559	5,969
Average % fat	4.85	4.81
Average yield of fat, lbs.	221	287

Compare those records and think what they would mean in an average dairy herd, in your father's herd for instance. The average production of the first bull's daughters was 999 lbs. of milk and 18 lbs. of fat less than that of their dams. If 20 of his daughters had been kept in the herd it would have meant a loss of about 20,000 lbs. of milk in a single year. At $2.50 per 100 lbs. for milk that would have amounted to $500. Not many dairymen can feel they can afford to lose that much these days.

The second bull's daughters showed an increase of 1,410 lbs. of milk and 66 lbs. of fat over their dams. Compare 20 such daughters with 20 daughters from a bull such as the first. In a single year, instead of a loss there would be a gain of over 28,000 lbs. of milk and over 1,300 lbs. of fat. Figuring the milk at the same price as above, it would amount to $705. These figures are for but a single year. If you will remember that the average cow remains in the herd for 5 or 6 years at least, you can begin to see what a good or poor bull means.

Both of these bulls were pure-breds, but one was from stock whose production was unknown; the other was backed by excellent production records. Undoubtedly the second cost more than the first but the chances are that the difference was not more than $300 or $400 at the most, and certainly that extra money was well spent. A bull that is priced low may not turn out to be such a cheap one after all.

How About an Aged Bull?

When your father buys a herd sire, does he always buy a young bull? Most dairymen do because a young one is easy to handle, not so liable to be ugly. This isn't always the best policy, however. When you buy a bull calf or a young bull, you don't know what kind of daughters he will sire. If he is backed by good producing dams and is a good animal himself, you can expect good heifers from him, but you can't be positive,—it doesn't always turn out that way.

Suppose, on the other hand, that you buy a 6-year-old bull, one that is for sale because the owner has a large number of his daughters in the herd. In that case you not only see the bull himself, but you can see the kind of daughters he sires and can learn something about their production.

Hundreds of good aged bulls go to the stockyards every year. Their owners can't use them any longer and no one else seems to want them. A good many of these could have been purchased for a few dollars above beef price and in a great many cases are better bulls than the youngsters that can be purchased for anywhere near the same price.

These aged bulls could in most instances be used for several years, if they were properly handled. Moreover, there is no particular reason why they should be vicious, other than in exceptional cases.

The greatest danger in buying an aged bull is that he may bring contagious abortion into your own herd, but by buying from a reliable breeder who has a clean herd, that danger is largely overcome.

USE A PURE-BRED SIRE OF YOUR FAVORITE BREED AND BE SURE HE IS A GOOD INDIVIDUAL

Take Care of the Bull

To get a good bull is one thing; to keep him a good one is another and quite important one. A good many dairymen buy good bulls but after a few years not all of them are still good ones. Some have become too ugly to keep, while others are, perhaps, non-breeders. Sometimes these things can't be helped. Occasionally a comparatively young bull will go wrong in spite of everything, but more often the owner has neglected to give it the right care. There are several things to be remembered about taking care of a bull, things which most dairymen know but which they sometimes forget.

First of all, don't allow the bull to run loose in the pasture with the rest of the herd. A dairyman should have a record of all service dates and know when cows are to freshen, which cannot be done unless the bull is kept separate from the herd. Furthermore, cows and heifers may be bred too soon or too young if they run with the bull. Then, too, this is a dangerous practice, because if the bull is at all inclined to be vicious, and most of them are sometimes, he has an opportunity to attack anyone that may cross the pasture.

Practically all breeders do keep their bulls confined, but there is one thing that many of them neglect. They don't see to it that those bulls get plenty of exercise. Did you ever go into a barn and find the bull shut up in a small box stall or perhaps locked in a stanchion? It's all right to have him fastened that way, but not all of the time. The herd sire needs plenty of exercise just as much as any other animal and the lack of it is one of the biggest reasons why so many good ones are uncertain breeders after they are five or six years old.

Sometimes a special pen or yard is built so that the bull's stall opens out into it. In all but the most severe weather, this gives him an opportunity to take as much exercise as he wants. Other breeders use a small treadpower for this purpose. Some of them even have the treadpower attached to the separator so that the bull will be doing useful work while he is exercising.

There are many different ways of forcing the bull to exercise and nearly all are good. The big thing is not so much how he exercises as it is to be sure that he does it. It not only helps to keep him healthy but it also helps to keep him from being ugly.

One thing more, and here is something especially for boys. Don't ever tease a bull, even when a calf. Let the bull strictly alone except when it is necessary to handle him. He isn't a good playmate for any boy and the bull that is teased is just the one to get ugly first.

Junior Letters

Hoard's Dairyman Juniors:—We have just received our buttons, fobs, and creeds. The first two are very nice but the last is best of all. Our mother says that if we make that creed our guiding star in life we shall be great men, even if we are never anything but dairy farmers, for greatness lies not in man-made distinctions but in having a high ideal and living true to it.

We do not have much land but we make good use of it all. Have two acres of good corn out and about a quarter of an acre of potatoes. Also good garden and truck patch. We have four cows, three of which we are milking. Manliff is past eleven and Richard ten years old today, and we can milk and take care of all the cows. We also have four nice spring pigs which are doing nicely, and two fine Shetland ponies with which we plow the corn and potatoes and do all the work except the breaking of the ground. We made five tons of fine timothy hay and just now we are helping harvest a nice piece of oats.

Our address is National Road, West, Addison, Pa., and we shall be glad to hear from any of the juniors at any time.

Thanking you for the buttons, fobs, and creeds, and with best wishes for all the juniors, we are, Manliff and Richard Dean.

Hoard's Dairyman Juniors:—I received your welcome letter some time ago and as it is Sunday I'll take time to answer it.

I am always very busy around home. Papa and the hired man were gone threshing every day for the last two weeks. They thresh very long at night, therefore mamma and I are through milking when they come home. We only have to help two of our neighbors thresh yet. We got 370 bus. oats, 30 bus. rye, 60 bus. speltz, and 10 bus. wheat. Our corn is doing well especially that which we are going to put into the silo.

We are still feeding ensilage and mix it with

AN ILLINOIS PIG CLUB BOY IN BUSINESS FOR HIMSELF

ran. We make Swiss cheese and the cheese maker says it doesn't hurt the milk any.

About six weeks ago mother and I made a trip to Rice Lake, Wis., where we visited a family who used to be our next neighbor. It was a fine trip and I liked the country very well. They have good roads and they all run on the section line. They can do this because there are no bad hills. There are plenty of lakes to go swimming, fishing, and boat riding. I had a very good time as there were a good many children of my age in the neighborhood.

I have good news to tell you. Papa now has a hired man and therefore I can go to high school. I think I will take up Dometsic Science. One of my best friends and I are going to board in the same place. High school will start on Sept. 9. I think I will like it very well.

We are going to put the electric lights in the house and both of the barns. We ordered a light plant; it seems to be very simple but we can make it run almost anything. Papa promised to get me an electric flat iron, which I think I will like.

We put the gas lights in the house when we built our house. We had to buy carbide and the generator would produce the gas. We had the generator in the cellar and it always worked all right, but the people were telling us to move it out for something might go wrong and explode. This happened in a few places as people were too careless about it. Then we moved it out and put it into a cellar under the shop; the water always froze and often we had no light. This spring something broke and now papa got tired of it and said it was getting to be a dangerous thing, so we are going to install a light plant.

Wisconsin. Emma Naef.

Hoard's Dairyman Juniors:—Part of the last two days I have been picking my corn, which is very good. As I stated before I expect to get between forty and fifty bushels of good seed corn, and a few bushels for the chickens.

Friday night, Mr. VanderLinden, local agent for fertilizers, from whom we bought one ton and a half for our garden, came to our place to get some of my corn to take to the state fair. He took three stalks and about a dozen cobs and said it was the best corn he had ever seen in Wisconsin. I would have sent some to the state fair but I did not have enough picked to select from to get it there on time. I will send you a couple of cobs under separate cover to show the kind of corn I raise.

Next Tuesday, September 10th, I will have to go to school. The school would have started a week ago but they were doing some repairing and did not have it ready. This will be my senior year in high school. I took the first and second grade in one year and skipped the eighth grade, thus being two years ahead of most of the boys and girls of my age. I don't know if I will go to Madison or not, I would like to.

Well, as my letter is getting rather long I will close for this time, and if I get a chance will write you when my corn is harvested.

Wisconsin. Harvey D. Knorr.

Hoard's Dairyman Juniors:—I received your letter of August 15 and was glad to get it. We have all of our grain threshed. Some hemp around here is cut. Ours is not cut yet. It averages eight feet and in some places 10 feet.

Some of our corn is ripe but we have not cut any yet. We have 30 acres of corn.

It has rained here for the last two days.

Our school will commence next week.

There are 8 boys from around here who are drafted. Some are going over and some are at Camp Grant.

Wisconsin. Melvin Miller.

Hoard's Dairyman Juniors:—Well, how are you juniors? I suppose you think I have forgotten you but I have not; I have been so busy that I have not had time to write but I have been reading the junior page every week and it is very interesting I have not got any stock just now except half share in a horse; my brother has the other share. We expect to breed her this fall and raise her colt; she is quite old and my brother would sell his share for $4.50.

I cut most of our wheat and succotash and some of the barley this fall. We threshed our barley and oats quite a while ago; we threshed that out of shocks. We were through stacking succotash and wheat quite a while ago. We have 7 stacks.

We are busy plowing now. I do the plowing with two horses and a sulky plow. They are quite big horses, otherwise we have to use three. I like to plow. We are picking seed corn now; I have made a seed corn rack that holds 76 ears which I have full. I made the rack by taking a 2x2 and driving eight-penny nails in on all four sides. The one I made is to hang up but I am making one like it to stand up that will hold 100 ears. I like to pick seed corn and it is none too early now as it is liable to freeze any night.

I have a garden with potatoes, popcorn, and navy beans.

I am going to try to get a heifer pretty soon. If I get one I am going to try to get a registered Holstein heifer. I am buying war savings stamps now and have three five-dollar stamps so far. I am going to buy many more.

I wish some of the juniors would write to me. My address is R. 1, Hayward, Minn. I guess I will close now wishing the juniors good luck and will gladly correspond with any of the juniors. I live in Freeborn County. I milk 4 cows now.

Minnesota. Russell Hanson.

La Crosse Happy Farmer TRACTOR

FOR only $1075 you can have the greatest tractor ever built. It is the Happy Farmer.

Because of the thousands of Happy Farmer Tractors we are building and selling, we are able to buy the best materials in great quantities and at bottom prices. Every part of the Happy Farmer is made in our own plant by the most up-to-date labor-saving machinery.

The low price of $1075 is the direct result of the size and system of the great company which makes the Happy Farmer Tractor.

Simplicity of Design

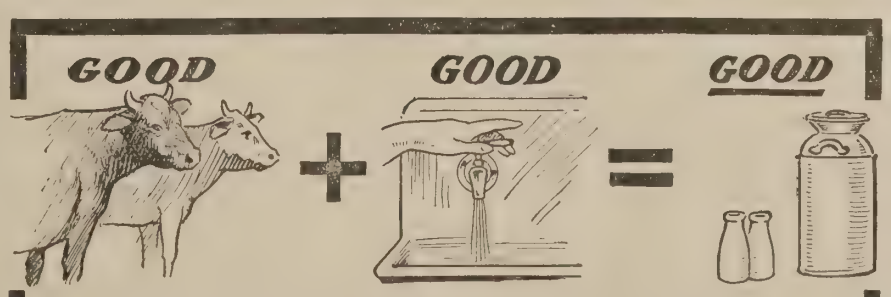
The Happy Farmer has the simple, wide tread and perfectly balanced design, which does away with unnecessary weight and keeps down fuel cost.

The Happy Farmer is the one man tractor. Every working part can be reached without stooping. Thousands of satisfied Happy Farmer owners testify that it is the perfect kerosene burning tractor for every size farm. It is the tractor which is self-guiding in the furrow and which turns short in its own tracks in a space of less than nine feet.

The Happy Farmer is rated at 12-24 horsepower and is the tractor which can be made to act like horses and throw more power on either side when needed.

Happy Farmer Tractor Implements

Happy Farmer Tractor Implements lead the field with the Happy Farmer Tractor. The Happy Farmer Grain Drill is the one with the patented automatic power lift and power pressure. Happy Farmer Disk Harrows have special strength and durability for tractor work. Happy Farmer Moldboard Plows are operated by the simple pulling of a cord from the driver's seat on the tractor.



See the Happy Farmer Yourself

Dealers are taking orders for the Happy Farmer Tractor now. We cannot guarantee to supply the demand unless orders are placed at once. There is a Happy Farmer distributor near you who holds Happy Farmer demonstrations from time to time. See the Happy Farmer at work and let it prove its leadership. Write us today for the name of nearest distributor who will let you know when the next demonstration is to be.

SALESMEN

Salesmen—Many of our salesmen have gone to war and we are filling their places with men exempt from draft. Lack of competition and great prosperity of our customers makes sales the best we have ever known. Selling experience desirable but not necessary. McCONNON & COMPANY, Dept. 67, Winona, Minn. 14-4

FARMS FOR SALE

Wanted—Fifty dairy farmers to locate in Northern Columbiana County (Ohio), ten of whom are capable of making herd records of 400 pounds of butterfat or over; five of them to be members of the Winona Cow Test Association and five to be members of the Salem Cow Test Association; fifteen of whom are to find membership in the Northern Columbiana County Bull Association; 40 to become members of the Eastern Ohio Jersey Breeders' Association; ten to become members of the Columbiana County Guernsey Breeders' Association. The children of these farmers are to assist in making a banner calf for us next year, and all are to co-operate in buying feed through The Salona Supply Company, (a co-operative enterprise). Those joining the cow test associations are to fill the places of those who fail to make winning records, thus holding for us our world leadership in this work. While Northern Columbiana county is as thoroughly equipped for the co-operation of its farmers as any locality in the United States, the demand for its cows and their products has outrun our dairymen's ability to produce them. We therefore ask fifty progressive dairymen to come to us and buy our half-operated farms that are offered at prices only forced upon the owners by the scarcity of farm help and exceptional opportunities in the industrial world. Address inquiries to DILLWYN STRATTON, Winona, Ohio.

Hardwood cutover land, silt loam, clay subsoil. Neither sandy nor gravelly. Close to town. Good roads. Good schools. In the heart of the dairy country. You deal direct with the owners. No agents and no commissions. Easy terms. Write for map and booklet 4. NORTH WESTERN LUMBER CO., Land Dept., Stanley, Wis. 1-42

Booklet on request presenting facts by State Commissioner of Agriculture describing the Mazarn Valley in the Ozarks, ideal for dairying and stock farming. Address MAZARN VALLEY LAND COMPANY, 847 Central Ave., Hot Springs, Arkansas. 1-tf

For Sale—60,000 acres cutover land in northern Wisconsin. $20 up per acre, $10 down per forty and $10 per month or balance payments extended, provided you do required amount of work. We have a few eighties with buildings ready for use. To purchasers of these we will rent teams and tools on community basis and advance money for cow, pig and chickens when you can supply feed; also grubstake you during farming season providing you put entire time to developing your farm. TOMAHAWK LAND CO., Box L, Tomahawk, Wis. 7-tf

If you wish a farm in the best grass section of the south where alfalfa and all the clovers, including Red White, Alsike, Sweet, Burr, Crimson and Japan grow to perfection, also soy beans, cowpeas, peanuts, velvet beans, corn, oats, wheat, rye, and barley where we have a creamery making fine butter and paying Elgin for butterfat, and where there is no bovine tuberculosis nor cattle ticks; in a community of northern farmers, write to H. B. GURLER, Macon, Miss. 25-tf

80-acre farm, five miles town, fair buildings, easy terms. Price $3,600.00. LEWIS GREENE, Route 3, Stanley, Wisconsin.

For Sale—80-acre farm. Good farm; good location. R. 3, Box 33, Juneau, Wis.

To Home Seekers—The Black Belt of Alabama is the garden of the south for stock breeding and dairying. Have a list of desirable farms, well located, for sale at $40, $50, and $60. Land equal in quality to Illinois farms selling at $200 and $250 per acre. Some samples: 3 of high class land, lying together 192, 200 and 350 acres at $50. One well improved 900 acres. Railway station on the farm 19 ms. from a modern creamery, at $45. Will divide and make 3 fine dairy farms. Write me for particulars of others. GEO E. BROWN Uniontown, Ala. 12-tf

For Sale—Ideal country home—Gladmon fruit and stock farm, home of the late J. E Baer. Excellent location, fertile soil, modern buildings, macadamized road, 2 miles south west of Baraboo, Wis. For information address C. J. BAER, R. D. 4, Baraboo, Wis 12-3

WM. LOUDEN
Originator of Modern Labor Saving Barn Equipment

"I wish to congratulate you on your endeavor to help the farmer overcome the farm labor shortage by using your barn equipment. I have in use your Stalls and Litter Carrier equipment and can say it is one of the best improvements I ever made on my farm." John Beemer, Elkton, S. D.

Save Half Your Barn Work Every Day in the Year

Louden Litter and Feed Carriers are an absolute necessity in these times of stress when every agency must be enlisted to overcome labor shortage. They release man help—actually cut the barn work in two. They make a big saving every single day in the year at one of the hardest and most disagreeable jobs on the farm—barn cleaning and stock feeding.

Louden Carriers Have a National Reputation for superior simplicity, safety, strength, working capacity and easy operation. These qualities are attained by discarding all clutches, brakes, ratchets, and other trouble-making parts, and adopting Louden patented features, which insure greatest efficiency and lasting service.

Louden Carriers are built to fit any barn from the largest to the smallest—and they always show a daily labor saving profit.

Get Louden Catalog and Plan Book

Write for our new 224-page General Catalog. It shows the full Louden line of Stalls and Stanchions, Litter and Feed Carriers, Hay Unloading Tools, Water Bowls, Ventilators, Animal Pens, Barn and Garage Door Hangers—"Everything for the Barn." Sent postpaid, no charge. *We want to send you also "Louden Barn Plans"*—a 112-page book devoted entirely to barn building, shows 74 barns of all styles and sizes. No charge. Write for it.

You should use
UNICORN DAIRY RATION

Because—it will make more milk and cut down your milk costs.

Because—you can save from 10 to 20% of your feed costs through the use of fewer pounds of grain per cow and the increase in milk or fat per cow.

Because—there is 10% more available food material in Unicorn than in any ration on the market.

Because—it saves labor and the mistakes of mixing and feeding. It is always uniform and reliable.

Because—Unicorn Dairy Ration is suitable for feeding alone, or can be fed with home-grown corn, oats or barley. Unicorn contains ample protein and may therefore be used either as a protein feed or as a complete ration.

Michigan Dairymen's Mee

The annual meeting of the gan Dairymen's Association held at Lansing, December 3r and 5th. This convention wi sist of all of the allied assoc and there will be joint meeti well as individual meetings time. The prospects seem brig a large gathering of dairyme milk distributors, buttermaker cheesemakers.

The object of holding the mee December is to avoid bad snow and extremely cold weather.

There will be no exhibits of m ery as in the past. This chan been made to conserve the use roads but after the war it is in to again hold exhibits of machi heretofore.

JERSEYS

Write to Breeders Who Know

THE Jersey has been called the "rich man's cow," because she helps make the poor man rich. She is the economy cow in "keep"—the profit cow in yield, because she produces more and richer milk from less feed than any other cow. Let us give you some real facts about Jerseys and open your eyes.

THE AMERICAN JERSEY CATTLE CLUB, 351 W. 23d St., New York City

peration and a New Agriculture.

(Continued from page 452)

d a League meeting in New Mil- We received information from resentative of the League about ing branches. The next week we a meeting at my house. Farmers backward, only a few attending, we started a branch League de- discouraging remarks. Today farmer in a two-mile radius and farther away are members and to be. They are enlarging their , raising more grain, putting up milk houses, ice houses, and ng improvements. Those who backward in the beginning are most ardent supporters."

he Dairymen's League has prov- me that the dairymen are able aster a situation when once they together, and the League is the s through which they pull."

he League in our community is a g and vigorous one. The farmers sturdy bunch with confidence in other and ever increasing confi- in the organization which has and means so much to them."

Growth of Confidence and Faith

e greatest result that farmers gained by organization is con- ce in one another. By both hered- nd environment we as farmers ssentially individualists. The na- of our work and our environment es us to work things out alone, pendent of our fellows. As a con- ence we have lacked confidence in neighbor. We used to think that ers could not work together, but e last two years we have abso- y changed our minds. We have and know by gratifying experi- that farmers can stick together, we have learned through the y new business and social meet- called by our organization that neighbor is a pretty good sort of w to tie to, and that he has the hopes, the same ideals, the same rations as we ourselves have. This ing of confidence means that the foundation is laid for unlimited essful co-operative action which mean in America, as co-operation meant in Denmark, that a suc- ful agriculture shall be recognized undamental to the prosperity of land; that its representatives l be heard at the great peace table h shall follow this war, and in legislative and council chambers ur nation; and co-operation will n that our countryside shall be a of fine houses and happy people.

BETTER THAN EVER—BIGGER THAN EVER

The Thirteenth and Semi-Annual Sale of the Waukesha County Guernsey Breeders' Assn.

WAUKESHA, WISCONSIN

NOVEMBER 6th and 7th, 1918

WEDNESDAY, NOVEMBER 6th, 1918

Pure-bred Male and Female Sale.

NINETY HEAD ARE LISTED. No offering ever placed before the public can compare in quality, quantity, type and breeding with the offering of this sale. It has been the aim of officials in charge to obtain the best in the County, and we believe they have succeeded.

The following is a brief description of some of the offerings:

CHAS. L. HILL, ROSENDALE, WIS.: Five pure-bred males: One son of Itchen May King 25174, and out of Donnington Goldie V, record, 796.52 lbs. fat at 3 yrs.; Langwater Eldorado 39136, grandson of Langwater Hope A. R., record 1,003 lbs. fat at 6 yrs.; one son of Langwater Eldorado; one son of Royal Rose King of Edgemoor, whose dam has a record of 934 lbs. fat.

WM. M. JONES, WAUKESHA, WIS.: 2 A. R. cows, Lilly May Rose 2nd A. R., milk 9,693 lbs., fat 502 lbs.; Imp. Rougette of Les Fontenelles A. R., milk 9,963.1 lbs., fat 498.1 lbs.; 2 daughters of the above mentioned A. R. cows.

GEO. McKERROW & SONS CO., PEWAUKEE, WIS.: 2 daughters of Governor of Myrtle Place 2nd 40985; 1 daughter of Governor Whimsome 26189, and 1 daughter of Cora's Governor of Chilmark 8971.

FRUIT BROTHERS, WAUKESHA, WIS.: Esther of Maple Hill A. R., 9,999.1 lbs. milk 523.3 lbs. fat at 3 yrs.; 3 daughters of May King's Vrangue of Ingleside 15430; and a full sister to Lillian of Maple Hill, record 631 lbs. fat at 2 yrs.

F. E. FOX, WAUKESHA, WIS.: Lily Bates of Highland, now on official test, 205 lbs. in 146 days; a granddaughter of Cora's Governor of Chilmark, out of a 572-lb. cow, that was 1st prize, Wisconsin and Illinois State Fairs, 1918.

JOHN H. WILLIAMS, WAUKESHA, WIS.: 1 daughter and 1 granddaughter of Rhea's King of the May; 1 granddaughter of Cilmaenen's Jeweler, and out of a 599-lb. cow.

H. A. KUHTZ, BURLINGTON, WIS.: 1 son of Itchen May King 25174, and out of a dam whose record in 335 days was 553 lbs. fat; 1 daughter and 1 granddaughter of Governor of Myrtle Place 2nd 40985.

GEO. S. LOVE, WAUKESHA, WIS.: 2 daughters of the great sire, Two Creeks 8648; 3 young heifers of splendid breeding.

ROY BURTON, EAGLE, WIS.: 1 grandson of Langwater Princeling 14906, and out of a cow now on test, making 533 lbs. fat in 340 days, Class DD; 1 daughter of Langwater Princeling 14906, and out of an A. R. cow; 1 daughter of Glenwood's Combination 5th 11354.

NOTICE: SPECIAL OFFERING: Complete dispersal of the herd of J. R. Bent, located at Genesee Depot, Wis. Sixteen head of the very choicest bred animals, practically all of the popular May Rose breeding, including 5 A. R. cows with records of 551 lbs. fat, 307 lbs. at 2 yrs.; 340 lbs. fat at 2 yrs.; 340 lbs. fat at 1 yr., 10 mos.; retest, 212 days, 349 lbs. fat; 477 lbs. fat at 3 yrs., and others on test; 1 daughter of May King of Ingleside 12558, and out of a 507-lb. dam.

THURSDAY, NOVEMBER 7th, 1918

30 Head of Pure-bred Males and 50 Head of Grade Cows and Heifers.

In order to give the public an opportunity of securing some of the very best herd headers in Waukesha, we are again offering a splendid lot of pure-bred males.

Included in the offering are:

1 son of Itchen May King 25174, and out of a cow with a record of 545 lbs.
2 sons of Langwater Eldorado 39136, who is a grandson of Langwater Hope A. R., 1,003 lbs. fat.
2 sons of Royal Rose King of Edgemoor 34361, whose dam, Belladia, has a record of 934 lbs. fat.
1 son and 2 grandsons of Sookey's Walter Sequel of Fritzlyn 19656.
2 sons of Cora's Sequel, 1st prize, Wisconsin State Fair, 1915.

The grades have been selected with the utmost care, and will include only animals that are fresh or due to freshen soon. Special attention has been given to the individuality and type of all of the consignments. You will make no mistake by starting a foundation herd from this offering.

Note: The New Sales Pavilion will be completed, and every assurance is given of comfort, regardless of weather conditions.

Write for illustrated catalogue.

M. L. WELLES, - ROSENDALE, WIS.

"Homestead Farm" "Guernseys"

We are offering five *Grandsons* of *Nella Jay 4th* from two to seven months of age, all from A. R. cows or on test. They are all choice individuals, sired by the highest priced bull of the breed.

W. G. Jamison & Sons, Appleton, Wis.

ELDERWOOD GUERNSEY FARM

offers for sale a nicely marked bull dropped Nov. 2nd, 1917, whose dam, now on test will make over 300 lbs. fat at 2 years and whose grandam has a record of 424 lbs. fat at 4 years and whose great grandam has a record of 484 lbs. fat at 2 years. **Roy Burton, Eagle, Wis.**

HERE'S A REAL BULL

His Sire is May King's Vrangue of Ingleside, the May Rose sire whose first ten tested daughters averaged over 600 lbs. butterfat as 2-yr.-olds and 3-yr.-olds. **His Dam** is an imported cow now on test that will finish her year with at least 400 lbs. fat, milked twice daily. **The Bull** himself is a dandy—a calf that would show well in any ring. The right kind of a herd header to use.

Remember he's guaranteed to be right. Write me.

W. A. LAWSON, Rosendale, Wisconsin

Ormsby Jane King 2nd

Two Nearest Dams Average 35.64

Ready For Service

HERE IS AN OPPORTUNITY for some small breeder to get a sire of exceptionally rich breeding and splendid type at a very reasonable figure.

ORMSBY JANE KING 2nd was a year old June 24th. He carries a straight topline and is nicely marked.

HIS SIRE, ORMSBY JANE KING, is a son of the "Great White Heifer", Ormsby Jane Segis Aaggie, who has a record of 46.33 lbs. butter and 879 lbs. milk in 7 days.

AS A FOUR-YEAR-OLD she broke the world's records by producing 44.42 lbs. in 7 days and 183.16 lbs. in 30 days.

NO OTHER COW IN THE WORLD has ever made two records above 44 lbs.

ORMSBY JANE SEGIS AAGGIE has a three-quarter sister, Ormsby Jane Piebe, with 38 lbs. in 7 days.

ORMSBY JANE KING'S dam and two nearest dams of his sire average 37.16 lbs. butter in 7 days and 147 lbs. in 30 days. Nothing left to be desired on the sire's side of the pedigree, is there?

THE DAM OF ORMSBY Jane King 2nd is Moneta Pietje with a record of 24.95 lbs. butter in 7 days.

SHE IS A SISTER TO Agnes Pietje and Ilmata Pietje, both with seven-day records above 34 lbs. as three-year-olds. Another 3-year-old sister made over 31 lbs.

THE DAM IS SIRED BY Hillside Della Pender Pietje who has three daughters with records from 31 to 34.86 lbs. as three-year-olds and six three-year-olds averaging above 30 lbs.

THE NEXT SIRE IS Woodcrest Pietje with 60 A. R. O. daughters, over half of them having over 20 lbs.

SO YOU SEE both sides of the pedigree are full of great sires and producing dams and besides this Ormsby Jane King 2nd is one of the first grandsons of the "Great White Heifer".

WRITE US TODAY FOR pedigree and full particulars.

The E. C. Schroeder Farms, Box 576-H, Moorhead, Minn.

The Winship Farm Bulls

Are From Persistent Milking Dams

The 18 cows milking in my herd during April averaged 960 lbs. milk per day and 52 lbs. butterfat, each, for the month. This included heifers milking since last September, October and November. These dams represent the best blood lines of the Creamelle, Johanna, Beets, and Ormsby families.

Sired by Aaggie Burke Cornucopia De Kol

A 29-lb. bull, who traces back directly to the two greatest foundation cows of the breed, Spring Brook Burke and Aaggie Cornucopia Pauline. He is also closely related to the two champion 31,000-lb. milk cows.

You Can't Afford to Overlook This Young Bull

Canary Ormsby Johanna De Kol 256894.

A SON OF THIS THREE-YEAR-OLD FOR SALE.

Canary Ormsby Johanna DeKol produced 28.18 lbs. butter, 503 lbs. milk in 7 days and 111.95 lbs. butter, 2,318.6 lbs. milk in 30 days at the age of 3 years, 1 month, 6 days. Her sire, Canary Fobes Bessie Homestead (20 A. R. O. daughters), is a 31-lb. grandson of Canary Paul and Homestead Jr. DeKol. Her dam is a 17-lb. 2-year-old daughter of Sir Ormsby Johanna DeKol (31 A. R. O. daughters, 2 above 30 lbs.). Every dam in her 4-generation pedigree has a good A. R. O. record.

The Sire of This Young Bull is Mutual Fobes Longfield DeKol 82959, a son of Mooie Mutual DeKol and from a daughter of Homestead Jr. DeKol that, as a Jr. 3-yr.-old, made 30.04 lbs. butter, 630.8 lbs. milk in 7 days and 124.42 lbs. butter, 2,651.6 lbs. milk in 30 days.

This youngster is well marked and as straight as they make them; so are his sire and dam. Moreover, he's a descendant of proven producers from one end of his pedigree to the other. His dam's record as a 3-yr.-old is bound to be increased. There's no question but that he'll prove to be a top notch herd sire. He was born April 10, '18. Write us about him today, for he won't be here long.

MILFORD MEADOW'S STOCK FARM, Lake Mills, Wis.

A Few Good Ones For Sale

O. dams and a few cows in calf to the 33-lb. bull. Write me or come and see them for yourself.
J. D. McDONALD, WEST SALEM, WISCONSIN.

GREEN COUNTY HOLSTEIN SALE

MONROE, WIS.

Oct. 30-31, 1918

Superior Individuality

the thing for which Green County Holsteins are especially noted, will characterize the animals consigned to this sale.

The management has accepted only such animals as would reflect credit upon Green County, as a place to buy Holsteins, and serve to give a public demonstration of the high quality of Green County's Black and Whites.

Green County is noted for being one of the greatest dairy counties in the world. It is also known that the quality of her Holsteins has had much to do in establishing this reputation. Likewise it is conceded by well informed Holstein men that the excellence of Green County Holsteins is due to the fact that for years the best bred bulls in the state of Wisconsin have been used in Green County.

In this sale there are sons, grandsons, daughters and granddaughters of such noted bulls as King Alcartra De Kol Pontiac a 36.59-lb. son of King Segis Pontiac Alcartra the great $50,000.00 bull, King Pieter and King Pieter Lyons two of Mr. Moyer's great herd bulls, Colantha Johanna Champion a son of Wisconsin's most famous Holstein cow, Colantha 4th Johanna, and King Agatha Pontiac Lass a 30.67-lb. grandson of K. P. Pontiac Lass 44 lbs.

The young stock in this sale not only possess the blood of such noted animals as have just been mentioned but they come from practical milk producing cows, some of which have records as high as 27.32 lbs. in seven days and good yearly records as well.

A carload of choice high grade springers are to be sold in the morning of Oct. 31th.

Catalogs ready October 21st.

Write to Chris. Tochterman

Dispersal Sale

of entire herd of

64 REGISTERED HOLSTEINS 64

And 30 Grade Holsteins

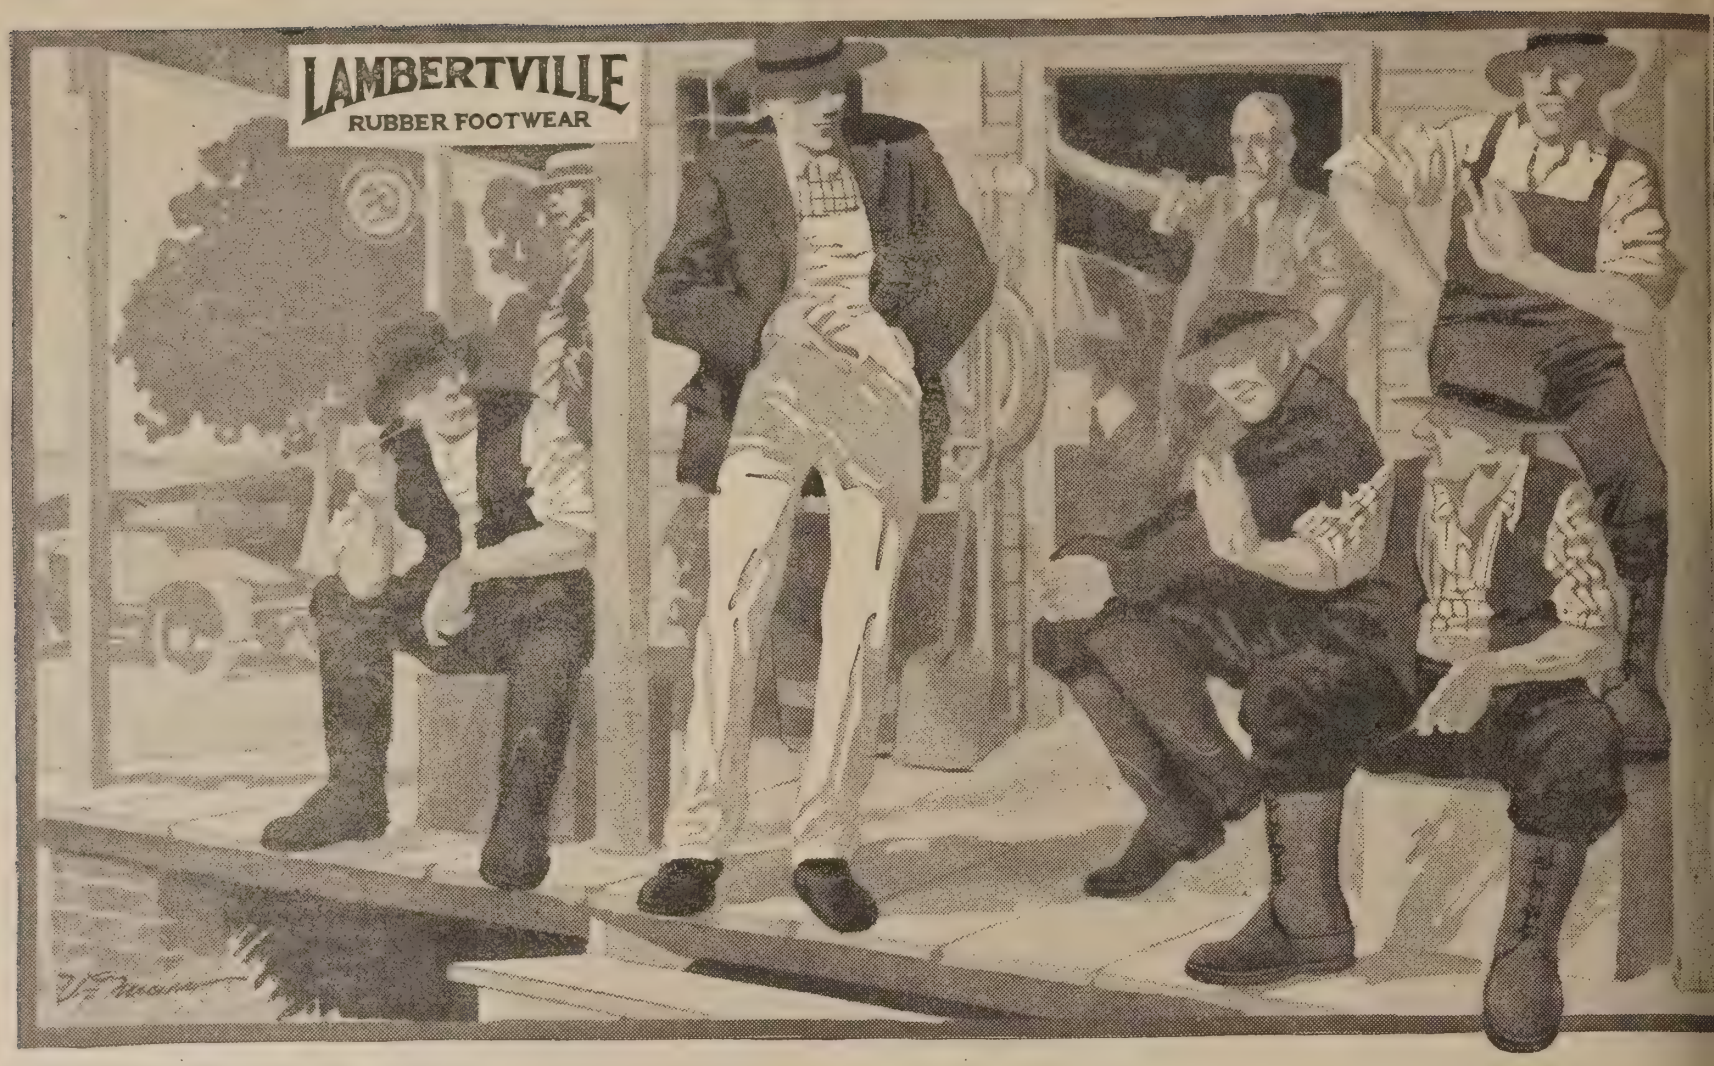
Thursday, Oct. 31, '18

St. Joseph, Missouri

Our herd consists of 55 head registered females, cows and heifers, 9 registered males, and 30 grade females mostly heifers.

Herd sire, Poplar Butter Boy Clothilde.

The record of his dam and sire's dam in 7-day test average 29.76 lbs. butter, 510.60 lbs. milk, and 4.63% fat.



The sire of this young bull is a son of Tweede DeKol Lass, a 34.39-lb. cow, and is therefore a brother of K. P. Pontiac Lass with a 7-day record of 44.18 lbs. He also has 78% the same breeding as the $15,000 bull, Spring Farm Pontiac Cornucopia.

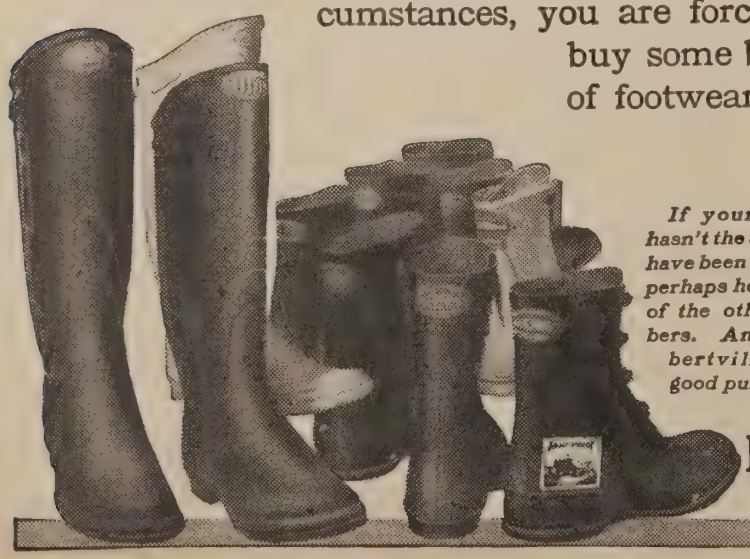
We have a number of this young fellow's heifers and male calves out of good producing dams in this sale.

Sales ground on street car line. Take Union line car going south at Union Depot for Lake Contrary. Sale starts promptly at 10 a. m. Write for Catalogue.

Western Dairy and Ice Cream Co.,

J. R. Fenner. 218 So. 5th St., St. Joseph, Missouri.

"Anybody want to sell his Lambertvilles?"



"There's not another pair in the store. John says he sold out and he's got word from the factory that there's not enough Lambertville goods to go around because most of them are going to fill Government orders. I know war's war and we must make sacrifices; but I've got a lot of wet work to do and I can't get along without Lambertville boots. Come on Joe—or you Bill—what'll you take for your Lambertvilles?"

The above is by no means an unusual or overdrawn incident. It will be difficult to buy Lambertville Footwear this season. The Government is getting nearly all we can make. The man who finds a dealer with an odd pair or so of his size in stock is fortunate.

If, through these unusual circumstances, you are forced to buy some brand of footwear that you do not know and that is perhaps of low quality than Lambertville, take them only as temporary substitute. Your dealer will have t old familiar and reliable Lambertville goods just soon as conditions are normal.

If you are disappointed, don't blame the deal It is his loss, and our loss as well, if your nee cannot be met, and we ask that you take the d appointment patriotically as a temporary substitu

We make our promise both to you and to t trade that a full line of Lambertville Footwear w be available as soon as the Government deman are lessened. In the meantime, make your boots and shoes last as long as you can, and if y are lucky enough to find a dealer with Lambe villes, buy them on sight.

If your dealer hasn't the style you have been wearing, perhaps he has one of the other numbers. Any Lambertville is a good purchase.

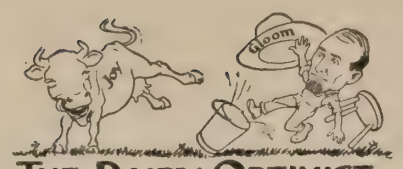
Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of the Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome immoral and quack advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.



Take Care of Dairy Cows

As pastures begin to wane it is often the custom to permit the cows to get in a run-down condition. This is an expensive practice. Do not permit the flow of milk to decrease. As the pastures give out begin to increase other feeds so as to keep the milk flow constant. Preparations should also be made to shelter the animals from cold rains, sleet, and snow. More energy is consumed in maintaining the body heat of the animal exposed to severe weather than is utilized in the production of milk and butter.

Velvet Beans are Good Feed

The feed question is being solved in many parts of the South by abundant yields of velvet beans which were sown on a large acreage this year. Owing to the increased acreage in Georgia, that state alone could take care of 50,000 to 100,000 head of cattle from states where forage is scarce, according to a report recently received by the Bureau of Crop Estimates. Large quantities of last year's velvet beans also remain on hand and are being used extensively in feeding dairy cattle.

In tests conducted by the United States Department of Agriculture on the Government farms at Beltsville, Md., it was found that velvet beans compare favorably with cottonseed meal, producing profitable gains when the beans are the sole concentrate of the ration; that a combination of corn silage and velvet beans forms a satisfactory ration for fattening steers for market; that it is more profitable to feed soaked beans than it is to grind them; and that more beans will be eaten if soaked before they are fed than if they are fed dry.—U. S. DEPARTMENT OF AGRICULTURE.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

Coming Down to Earth

Farmer's daughter: "Dad, I'm so busy I don't know what to do. It's the season for planting lily bulbs, tulips, daffodills, hyacinths, and the crocus. Then I must box my geraniums and heliotropes and study up on new rose specimens for next spring."

The farmer: "I'll give you just six seconds to git in th' house and start knittin' a sweater fer th' soldiers."

"That was a good idea—the Minnesota fair folks modelled a big eagle out of pure butter and the eagle was swooping down on a butter Kaiser."

"Humph, peers like to me they ought to have made the Kaiser out uv oleomargarine."

Saying Goodbye

Oh, th' season's over,
For my world of clover;
  And the fragrant apples trees beside a little stream.
Watch th' herd a-grazing,
When the sun was blazing,
  And the very breath of fields made you want to dream.
Goodbye, Mistress Summer,
You have been a hummer,
  Miles of lush, green meadow put the profit in th' cream.

Oh, the season's ending,
When, with colors blending,
  Buds 'neath every fence and hedge were smiling out at you.
Night comes, sort of coolish,
Straw hats sure look foolish,
  There's a dash of winter in the feelin' of th' dew.
Good-bye, Mistress Summer,
See th' sad New-comer—
  Wood to cut and paths to clear and winter chores to do.

Oh, the herd is knowing,
At fair summer's going,
  Every cow and every calf is sad to see her go.
Wind will soon be whizzing,
And the dear streams frizzing,
  And the meadow where they grazed will burrow deep in snow.
Good-bye, Mistress Summer,
You have been a hummer,
  And the herd and me are sad at partin'-time, you know.

Reflections of a Calf

(After having been fitted out with a patent weaner.)

"The whole world is against me."

"I'd like to fasten this thing on the hired man's face."

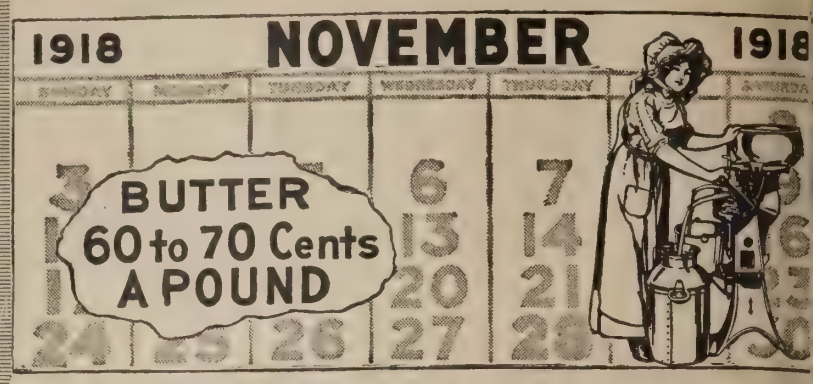
"If I look as foolish as I feel with it on, I must be a sight."

"What were milk appetites made for, anyhow."

"Even mother doesn't want me around with it on."

"May the Kaiser wear one for life."

"I hope the fellow who invented this will choke."



Observations of the Oldest Dairyman

"Men are like cattle—the ribbon winners are apt to have pedigree. If you'll investigate, you'll find that the boys that bring back war medals just nachally have it in th' blood."

"A city friend of mine raised chickens this past summer. He told me what he had to pay for grain to feed 'em, and, while not very good at mathematics, I figure that his eggs cost him about ninety cents apiece, and his hens are worth twenty-two dollars on the hoof."

"I have a small field of buckwheat. There's sentiment mixed up in it. On a cold winter's morning, if you set a big plate of cakes and hot sausage before me, I can't keep from cryin', I'm so happy."

The worst loafing on earth is done by some pieces of farm land.

NOW IS THE TIME
to get your new
DE LAVAL
CREAM SEPARATOR

WITH butter prices soaring no cream producer can afford to go another month without a New De Laval Cream Separator.

This is true whether you have no separator, or an inferior or half-worn-out machine, or even an old style De Laval.

In cold weather your waste of butter-fat is relatively greater, either with gravity skimming or a poor separator; and at present prices for cream a De Laval would very soon pay for itself out of its own savings.

There is no cream separator that can compare with the De Laval in clean skimming, capacity, ease of operation, durability, and in freedom from repairs. It's the world's greatest cream saver.

Order your De Laval now and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or, if you don't know him, write to the nearest De Laval office as below.

The De Laval Separator Co.

165 Broadway, New York. 29 E. Madison St., Chicago.

50,000 BRANCHES AND LOCAL AGENCIES THE WORLD OVER.

HE 1918 NATIONAL DAIRY SHOW

IRY Products are Essential" was the red thread of interest was woven in and out through part of the 1918 National Show at Columbus, October . Babies vied with McCollum in the attempt to drive home the tial qualities and value of milk or growth. While the rats en- the attention of many, it must nfessed that the babies drew and the larger audiences that stayed ad and reread the legends over ribs. Many a mother and father have left the show with a keener eciation of a proper diet that include milk, for they had seen sible demonstration of the gain by poor, starved baby bodies milk and a proper diet were lied these little youngsters. They a twelve-month-old baby girl weighed only 10 lbs. and should h twice as much. Under proper and with proper food, which con- cow's milk, the child has now ed on the upward curve and last h increased its weight two ds.

was a splendid show in every de- nent. Owing to unsettled freight itions and scarcity of labor, the ber of cattle were somewhat less in previous years, yet there were ient to make a good show and to rate the show type of animals in favor in the several breeds. exhibit of dairy machinery and lies was most excellent, exceeding umber, variety, and excellence of any previous dairy show. It in itself worth many miles of el, and it did attract milk rs and ice cream manufactur- from coast to coast. The educa- l exhibits were many and varied, despite all these things the show idance was exceedingly small. La- conditions on the farm, war with emands on finances and time, and nfluenza epidemic all conspired to ease attendance and the Show was ppointing only in point of at- ance. It has been decided that the Show will be held in Chicago. A committee has been appointed to determine whether it will be held at the Municipal Pier, Coliseum, or at the stock yards.

The Child Welfare Exhibit occupied a building by itself and it was packed with interest and information for the mothers, and that it was of interest to men was manifest by their critical consideration of the exhibits. While dairy products were given major consideration, there was other information on child welfare topics and health conservation. The following is the menu suggested for the child at the beginning of the second year: 6 a. m., glass of milk; 9 a. m., orange juice; 10 a. m., strained cereal and twice baked bread with a glass of milk; 2 p. m., meat broth or puree of vegetable and twice baked bread with glass of milk; at 5:30 and 10 p. m., a glass of milk. Again and again visitors were urged to feed the growing child a quart of milk a day,—and never less than a pint.

Cottage cheese dishes in all their various forms and disguised as sausage, peanut loaf, etc., were much in evidence. That dairy dishes were popular was shown by the numbers who availed themselves of the dairy luncheons that were served in the building used by the Department of Agriculture. A sample luncheon consisted of three meatless but toothsome sandwiches made with a combined cottage cheese and nut or fruit filling, creamed rice or potatoes, milk or hot milk flavored with coffee, and a dessert such as prunes with whipped cream. It was a clean, satisfying luncheon that left no regrets, and was a splendid advertisement of dairy dishes.

Seldom, if ever, has the Department of Agriculture put on an educational exhibit of so varied and informative nature, particularly when confined entirely to dairy production. It is a matter of regret that conditions were such that comparatively few consumers or producers were in attendance at the Show, but those who were there spent much time with the government exhibit.

The southern states of North Carolina, Virginia, Tennessee, West Virginia, Georgia, and South Carolina were represented by an exhibit of 56 cheese of the "Daisy" variety from the 43 factories located in these states. Claim was made that the "southern mountains are ideal for making fine cheese. High above the sea the days are full of sunshine and the nights are cool. Bluegrass grows in abundance and every farm has a cool spring." The value of southern cheese sold has increased from three million dollars in 1915 to 246 million dollars in 1917,—something of a growth for a new business in a territory hitherto unknown to the industry. This was accomplished most largely through the initiative of the U. S. Dairy Division and its co-operative work with the several states.

That the scourge of tuberculosis provides most expensive fertilizer was shown by charts in the booth set aside for this exhibit. Of the eleven million cattle slaughtered under government inspection during 1917, 222,787 were found to be affected with tuberculosis and 40,792 of these were found unfit for food and were consigned to the fertilizer tanks. Of the 35,449,247 hogs slaughtered, 3,495,188 were afflicted with tuberculosis and 459,740 of these were sent to the tanker. This represents a total loss of nearly 25,875,200 lbs. of dressed meat (431 cars). As only 60% of the nation's meat supply is slaughtered under government inspection and as there are other losses on farms, the estimate of an annual loss of twenty-five million dollars due to animal tuberculosis does not seem extravagant. Lesions of tuberculosis with the characteristic nodules were shown in the various body tissue of the animals and the value of tuberculin testing was here illustrated and explained.

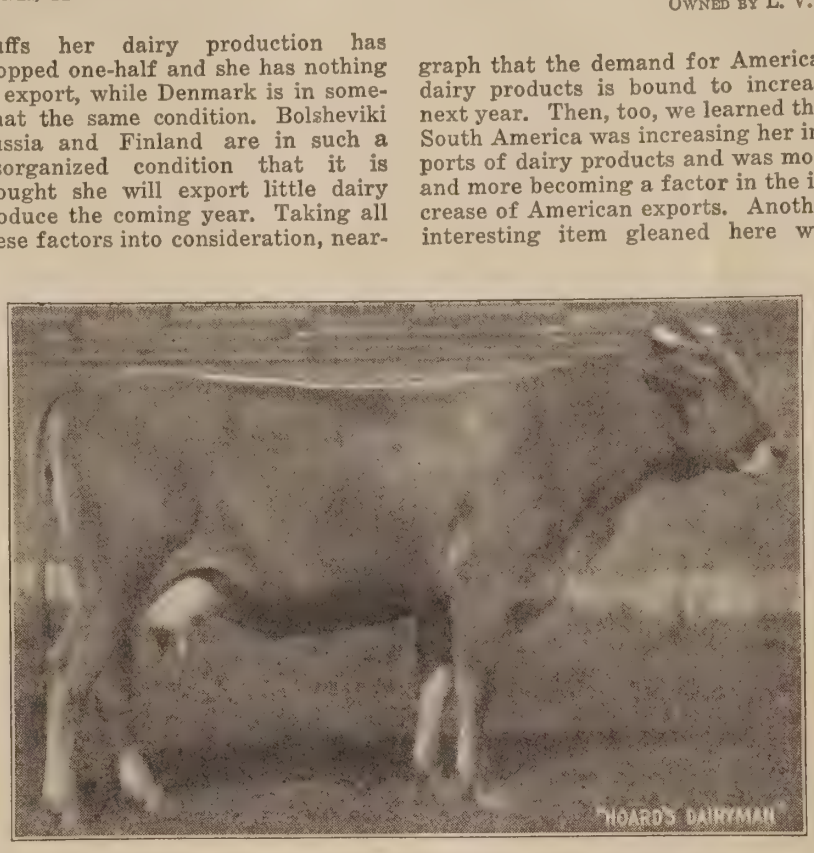
That the U. S. Food Administration has been a mighty factor in establishing and giving publicity to the value of dairy products is recognized, and their exhibit helped to drive home this fact as well as to further the cause of dairying. The Food Administration is not a selfish advocate of dairying as an industry, but rather an advocate of its products to supply the necessity of the consumer and the consumption of dairy products as a conservation measure. Bulletins and posters were displayed that had been distributed in large numbers, such as: "Milk, the Best Food We Have", "Need for a National Dairy Army", "Use Milk in All the Ways You Think Of", "There is Nothing So Good for Growing Children", and "Milk is Meat and Drink". The plea in all these is that milk is cheaper than other animal foods, it is essential for the growth of the child, and there should be: "A quart of milk for every child, and a pint of milk for every adult."

"Ohio, the Switzerland of America," is the claim made by that state's exhibitors of Swiss cheese. It has won the gold medal at the last two shows and the makers of Southern Wisconsin may have to look to their laurels if Ohio makes the advance it promises, and it now claims to have 100 factories and to have made the first Swiss cheese in America. At another booth the United States Dairy Division had on exhibition two Swiss cheese, one that had the special starter used in its making and the other a normally made cheese. The former had the characteristic "holes" that are so important as also a much better flavor.

The ticking of a telegraph key that connects up with 13,000 miles of leased wire drew attention to the exhibit of the Dairy Marketing section of the Bureau of Markets. Over these leased wires the Bureau secures its information as to market conditions which it later compiles and issues in daily and weekly bulletins of storage stocks, with butter and cheese prices at the principal dairy markets. This

PICK THE BEST FIVE COWS

This was asked of every visitor at the exhibit sent to the National again this year by the Barnesville Cow Testing Association of Ohio. Any member of a cow testing association knows what pened. In every case one or more poor producers were placed well toward the top, while good producers were shoved to the bottom. These were all Jersey cows, and so special interest was ised when two somewhat noted Jersey judges placed their awards. The cow standing fourth from the left had every outward appearance of a good producer, deep, long body, good milk veins, rather desirable type. Naturally they placed her among the five best, but imagine their chagrin when the card was turned over and they found her yearly production to be 2,523 lbs. milk taining 149 lbs. fat. To cover their confusion, claim was made that it was due to improper feeding, yet investigation showed she came from a herd having several cows with records over 500 fat and others with excellent production. Her poor production is largely explained by her not being a persistent milker. There were eleven cows exhibited (only eight shown in photo) with following yearly fat records, reading from left to right: 503 lbs., 531 lbs., 544 lbs., 149 lbs., 276 lbs., 179 lbs., 417 lbs., 421 lbs., 275 lbs., 217 lbs., and 240 lbs. The two cows shown at the extreme right (Nos. 7 and 8) have records of 417 and 421 lbs. fat each, yet we know of several who placed them among those to be discarded. It was a worth while exhibit, giving a pointed lesson definitely showing that the only way to be certain in judging cows is to use the milk scale and tester. If you milk cows, join a cow testing association.



RALEIGH'S OXFORD PRINCE, SENIOR AND GRAND CHAMPION JERSEY BULL AT THE 1918 NATIONAL DAIRY SHOW

Owned by L. V. Walkley, Connecticut

service seeks to inform the manufacturer and producer of market conditions so that the law of supply and demand will work more smoothly and there will be less speculation on markets. According to an analysis of the reports issued during the past few months it would appear that unless some unusual condition arises our surplus of butter and cheese will be exhausted in a few months and only an increased price with resulting decreased consumption will again build up reserves. The market reports make an interesting study and should prove valuable to those who learn how to properly interpret them. These various daily and weekly reports will be supplied free of charge by writing the Bureau of Markets, Washington, D. C.

Statistics may be dry and uninteresting to the general public, but when they concern a special industry in which one is engaged they have a larger meaning and interest. At least, this was demonstrated by the number of men who stopped to discuss the dairy statistics charts with their author, Mr. Pirtle of the Dairy Division. The losses of cattle have been somewhat exaggerated, but it is assumed that the 2,436,000 cows in the occupied portions of northern France and Belgium have been largely lost to the world and that the cow population of Serbia, Roumania, and Poland has possibly been nearly exhausted, but in Great Britain, Denmark, Holland, Sweden, Norway, and Russia the number of cows has increased rather than decreased. However, it is asserted by government reports from Holland that owing to scarcity of foodstuffs her dairy production has dropped one-half and she has nothing to export, while Denmark is in somewhat the same condition. Bolsheviki Russia and Finland are in such a disorganized condition that it is thought she will export little dairy produce the coming year. Taking all these factors into consideration, nearly all the former exporters of dairy products except America and Australia will next year require all their own production, while the demands of the importing countries will equal if not exceed their previous demands. This would seem to reinforce the opinion stated in the previous paragraph that the demand for American dairy products is bound to increase next year. Then, too, we learned that South America was increasing her imports of dairy products and was more and more becoming a factor in the increase of American exports. Another interesting item gleaned here was that a foreign investigator compared the figures for the increase in the price of milk in certain localities over a period of three years and also the infant mortality for the same period and localities, finding that as the price of milk advanced or decreased the infant mortality increased or decreased. This is a further reinforcement of the essentiality of milk in

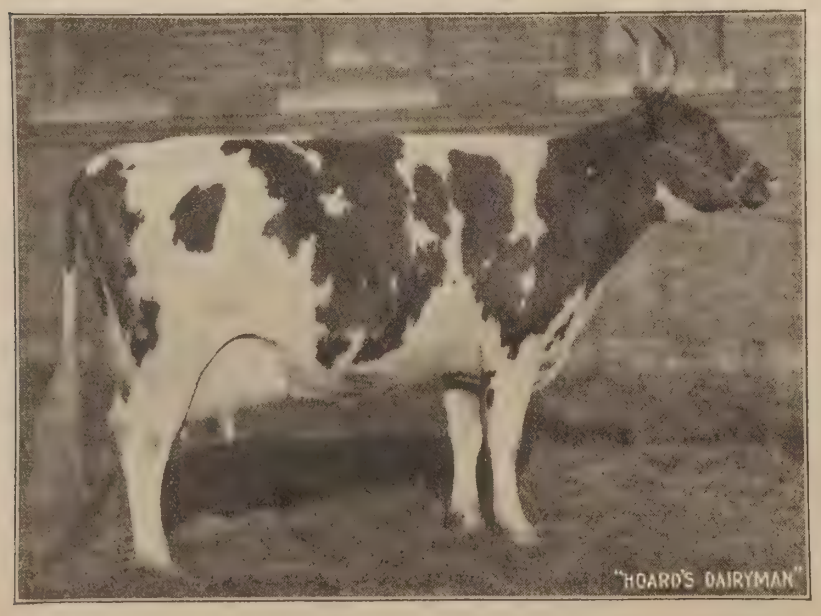
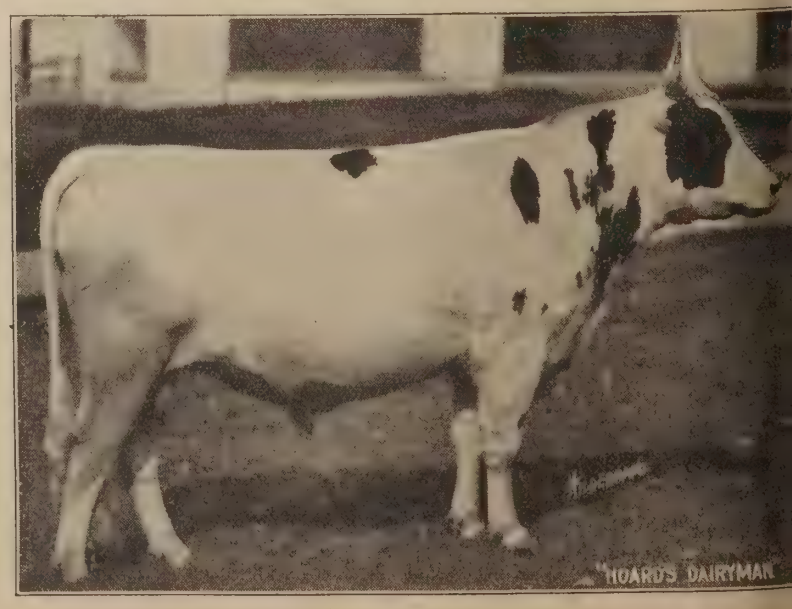
Owned by Hull Bros., Ohio



diet of the child.

The great variety of dairy produ and the ramification of the indus were shown under the title, "H Milk is Used". A partial list of dairy products shown were fluid m condensed and evaporated milk, b ter in various packages, and some or more varieties of cheese rang from the big, round Swiss types American Cheddar to the small pa ages of Neufchatel, while ranging between were the Italian and ot foreign cheese, such as the Provol which had the appearance of a hur skull, American Roquefort, Rico Parmesian, etc. Then, too, we fo that milk casein was used in Ameri cigarettes, that aeroplanes req milk glue, that milk furnishes the b of artificial ivory, oil cloth finish, s polish, cold water paint, etc.



Cattle Exhibits

There was not as large an exh of cattle at the Dairy Show this y as there has been in former ye Under conditions in which the ca industry is placed it was not surp ing to find a light showing. The tle exhibit was, on the whole, a cr to the several breeds and their c ers may be complimented on splendid preparation given t herds. Labor is scarce and feed in price but in spite of these ha caps the cattle were put in fine s condition.

In the Jersey cow class there w a large number of individuals and brought sharp competition in the and a keen interest to those at

side. In all other classes, except nose provided for young animals, e were very light entries. Each s, though small, provided some d animals which kept up the in- st of the breed critics. It takes rge number of prominent animals he mature classes to create and the attention of the spectators. re was a lacking, this year, in the t of rivalry which adds zest to the ving of fine cattle. We are of the ion that this state of mind can- be attributed entirely to the small ber of cattle shown but to the t world's war which is the all rbing business of this nation. It mething none of us can escape.

ne exhibitors did well to put on reditable a showing under the try- circumstances. They not only had neet war conditions but influenza rife among the herdsmen and y of them were taken to the hos- during the last days of the show the barns closed.

ne 1918 Show, like the one of 1, will long be remembered by e who exhibited cattle. The men made the sacrifice to exhibit this should have the everlasting grat- e of their fellow breeders.

Jerseys

xhibitors: H. W. Bonnell, Ohio; A. Brewerton, Illinois; B. H. Bull n, Ontario; J. K. Dering, Illinois; C. C. Folck, Ohio; Hood Farm, achusetts; Ed. C. Lasater, Texas; gview Farm, Missouri; Inderkill ns, New York; Myrtle E. and Earl yle, Ohio; T. P. White, Ohio; and V. Walkley, Connecticut. Total nals shown 202, or two more than year.

dge: Hugh G. VanPelt, Iowa.

ne Jerseys made the largest exhib- any of the breeds and the herds up to their usual standard. Most ne animals exhibited were of the Island type which for the past few years has taken possession of the show ring. It may be said that this type is beautiful and attractive and meets the standard of the show ring.

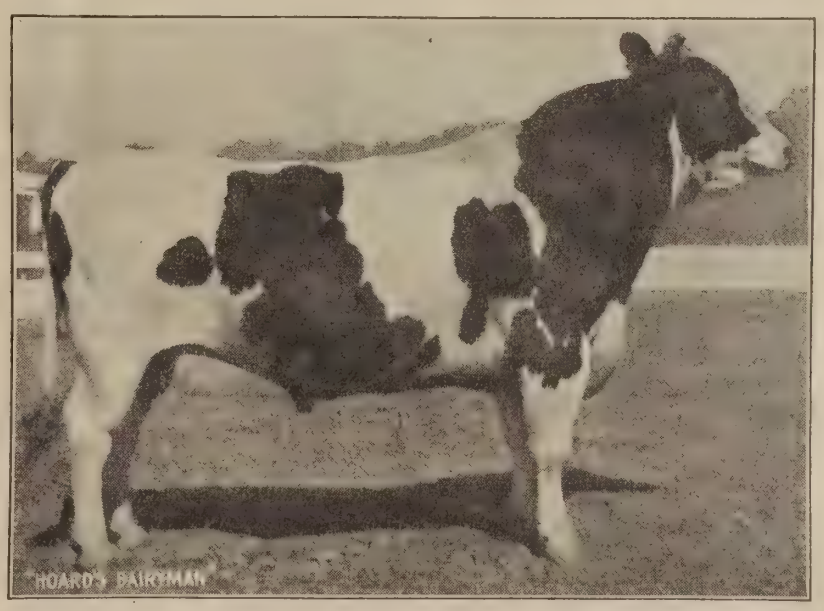
For the number of animals shown there were unusually few mature bulls. Only three appeared in the ring. Ralph's Oxford Prince, owned by Ed. C. Lasater, won first in this class and Bonnie's Perfection, owned by B. H. Bull and Son, second. The ring-side judges agreed with this decision, but there was a difference in opinion of those on the sidelines regarding what animal should have been awarded senior champion. Raleigh's Oxford Prince was given senior champion, but Longview Farm's Poet's Whiteheart had his following for this place. Grand champion was also won by Raleigh's Oxford Prince.

In the mature cow class there was an unusually good exhibit, one of the best ever made at the Dairy Show. There were 24 cows and they, with few exceptions, were of splendid show type. The famous cow, Lucky Farce, with a record as a yearling of 14,200 lbs. of milk containing 635 lbs. fat, was among these matrons, but she lacks in show type. She has wonderful dairy capacity as her record shows, but her conformation does not reveal her great talent. Beauty Maid, owned by B. H. Bull and Son of Ontario, is a cow of splendid type, large, smooth, deep bodied, straight back, good udder, and very attractive from the standpoint of production, that could not receive attention of the judge, because her conformation was materially different than the rest of the cows showing against her. Beauty Maid was grand champion at the Ontario fair and she holds the four-year-old championship of Canada over all breeds for production of butterfat and second place, any breed any age, of all cows entered in the Record of Performance of Ontario. She is a wonderful cow, for she is of beautiful type and a large producer.

Oxford Majesty's Gipsy won the blue ribbon and finally grand champion. This is not a new honor to her as she was the grand champion at the Dairy Show last year. The illustration which appears in this issue is a very good likeness of this many times champion.

We were particularly impressed with the heifer, Selma of Minerva, owned by Hugh W. Bonnell. She is an animal of strong constitution, deep body, fine udder and shows strong dairy talent. As a two-year-old she made in a year 9,378 lbs. milk containing 530 lbs. fat. She won first in her class, but the judge did not consider her strong enough to win grand champion.

There was keen competition among the Jersey exhibitors, but Longview carried the greatest honors.



The list of awards follows:

Bull 4 years or over—1, Lasater on Raleigh's Oxford Prince; 2, Bull & Son on Bonnie's Perfection; 3, Folck & Son on Chief Oxford Lad. Bull 3 years and under 4—1, Bull & Son on Brampton Radiator; 2, Longview Farm on Warder's Chieftain; 3, Brewerton on Raleigh's Acland; 4, Pyle on Angelica's King. Bull 2 years and under 3—1, Longview Farm on Poet's Whiteheart; 2, Pyle on Sans Alois Niece's King; 3, Walkley on Gamboge's Royal Majesty; 4, Lasater on Esther's Eminent Noble; 5, Bull & Son on Brampton Beauty Heir; 6, Murphy on Murdale Pioneer. Bull 1 year and under 2—1 and 3, Longview Farm on Dahlia's Noble Fern and Chief Raleigh; 2, Bull & Son on Brampton Bright Lord; 4, Pyle on Financial Richmond; 5, Hood Farm on Pogis 99 of Hood Farm; 6, Lasater on Olive's Calla Aldan. Bull calf 6 mos. and under 12—1 and 2, Longview Farm on Raleigh's Bright Prince and Warder's Oxford Chieftain; 3, Brewerton on Thornbury's Peter the Great; 4, Pyle on King's Rosa's Sans Alois E.; 5, Lasater on Royal Majesty of Falfurrias; 6, Bull & Son on Brampton Bright. Bull calf under 6 mos.—1 and 3, Longview Farms on Noma's Perfect Raleigh and Jolly Oxford Majesty; 2, Lasater on Rosebud's Royal Majesty; 4, Inderkill Farms on Imp. American Volunteer; 5, Pyle on Stockwell's Niece's King; 6, Hood Farm.

Cow 5 years or over—1, 4, and 5, Walkley on Oxford Majesty's Gipsy, Oxford Majesty's Excel, and Oxford Majesty's Gouda; 2, Bull & Son on Brampton Serena; 3, Lasater on Willow's Brightness; 6, Longview on Oxford Majesty Crocus. Cow 3 years and under 4—1, Bonnell on Selma of Minerva; 2 and 5, Longview on Rower's Benedictine Glory and Fontaine's Pretty Maiden; 3, Walkley on Oxford's Dream; 4, Inderkill Farms on Golden Fern's Poulette. Heifer 2 years, under 3—1 and 3, Longview on Fontaine's Nema and Raleigh's Star of Peace; 2, Folck & Son on Fox's Majesty Maid; 4, Bull & Son on Brampton Sonata; 5, Walkley on Imp. Majesty's Gamboge Crocus; 6, White Stock Farm on Viola's Noble Belle; Heifer 18 mos. and under 2 years—1 and 6, Longview on My Rosary and Fairy Feather; 2, Bull & Son on Brampton Bright Rosebud; 3, Dering on Eagle's Chief Eulinda; 4, Lasater on Aldan's Oxford Fontaine; 5, Walkley on You'll Do's Golden Maid. Heifer not in milk, 1 year and under 18 mos.—1, Walkley on You'll Do's Pet 2nd; 2 and 5, Longview on Chieftain's Flora and Raleigh's Valve; 3, Bull & Son on Brampton Princess Agatha; 4 and 6, Dering on Eagle's Yolande Girl and Eagle's Christina. Heifer calf 6 mos. and under 12—1, 4, and 6, Longview on Raleigh's Evening Star, Raleigh's Red Feather, and Majesty's Golden Plymouth; 2, Bull & Son on Brampton Princess Lucy; 3, Lasater on Great Scot's Actress; 5, Dering on Eulinda of Cedar Crest. Heifer calf under 6 mos.—1, Longview on Raleigh's Fairy Finance; 2 and 5, Lasater on Raleigh's May Princess and Knight's Oxford Tulip; 3, Walkley on Oxford Majesty's Beauty 2d; 4, Folck & Son on Oxford Gypsy Cowslip; 6, Bull & Son on Brampton B. P. Red Rose.

Cow having official yearly record begun at 5 years or over—1 and 2, Longview on Fairy Glen's Flora and Oxford Majesty Crocus; 3, Lasater on Willow's Brightness; 4, Bonnell on Queen Esther Fox.

Exhibitor's Herd—1, Bull & Son; 2 and 3, Longview Farm; 4, Lasater; 5, Pyle; 6, Brewerton. Young Herd—1 and 2, Longview Farm; 3, Lasater; 4, Bull & Son; 5, Dering; 6, Pyle. Breeder's Calf Herd—1, Longview Farm; 2, Lasater; 3, Pyle; 4, Dering; 5, Bonnell; 6, Murphy. Get of Sire—1, 2, 3, Longview Farm; 4, Dering; 5, Pyle; 6, Bull &

Pail Balancing Scale

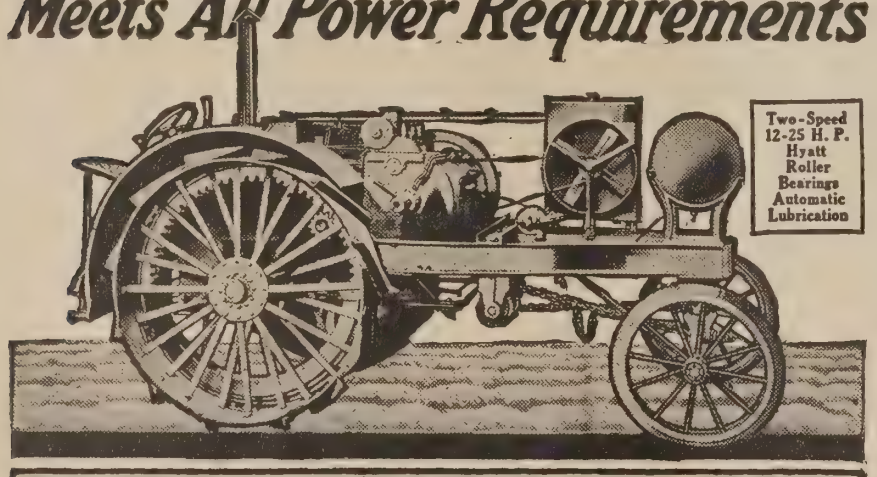
Direct to You For $2.85

JUST the thing to determine the yield of each cow. Especially popular with cream handlers who weigh the cream as collected at the different farms.

On the dial of this scale is a loose indicator which can be adjusted and set by a thumb screw, at the O mark so as to balance the weight of the pail. Thus, the net weight of the milk is shown.

Two
Record Blanks Furnished Free

with each scale. These blanks contain the record of two milkings a day for one week for 14 cows.



Three Capacities

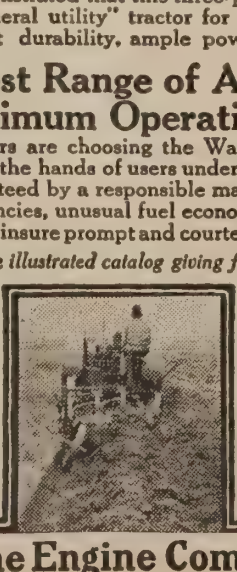
Meets All Power Requirements

WATERLOO BOY
ORIGINAL KEROSENE TRACTOR



Experience has demonstrated that this three-plow tractor, with 25 H.P. at belt is the ideal "general utility" tractor for any size farm. Its light weight, simplicity, great durability, ample power and economy give it

The Widest Range of Availability At Minimum Operating Cost

Discriminating buyers are choosing the Waterloo Boy because of its demonstrated success in the hands of users under all conditions; because it is built and fully guaranteed by a responsible manufacturer; because of its dependability in emergencies, unusual fuel economy, and because conveniently located distributors insure prompt and courteous service when needed.

Write for free illustrated catalog giving full information.

Geo. W. Brending, Milford, Ill., writes: "Your tractor has given complete satisfaction. I plowed seventy acres in eight days with a three-bottom John Deere Plow; did most of my discing with it using two 18 in. wheel discs at all times. Kept close record of operating cost—$2 per day paid for all fuel and lubricating oil when doing a full day's work."

Chas. W. Carlson, Stromburg, Neb., writes: "Your tractor is O. K. It is cheap to operate—not more than two gallons kerosene to the acre, plowing good depth, with 3-bottom 14 in. John Deere Plow. Plowed old alfalfa, sod pasture, stock and stubble ground without trouble. I use the tractor to pull 28 in. thresher and thresh 33 loads of wheat to a barrel of kerosene."

Waterloo Gasoline Engine Company 4103 W. Third Avenue Waterloo, Iowa

Son. Produce of Cow—1, 2, 4, Longview Farm; 3, Bull & Son; 5, Bonnell; 6, Dering. Advanced Registry cow with two of her progeny—1, Fairy Glen's Flora; 2, Queen Esther Fox; 3, Majesty's Eminence. Dairy herd, 5 cows in milk—1, Bull & Son; 2, Longview Farm; 3, Lasater; 4, Inderkill Farms; 5, Brewerton.

Senior and Grand Champion Bull—Raleigh's Oxford Prince. Junior Champion Bull—Noma's Perfect Raleigh.

Senior and Grand Champion Cow—Oxford Majesty's Gipsy. Junior Champion Cow—You'll Do's Pet 2nd.

Breeder and Exhibitor Winner of Most Money—Longview Farm.

Ayrshires

The best exhibit in years characterizes the 1918 National Exhibit. Exceeded in numbers only by the Jerseys, five exhibitors put forward 71 animals which for uniformity and quality exceeded that of any other breed shown. The exhibit was international in character, Canada entering two herds exhibited by R. R. Ness and Gilbert McMillan of Quebec, while American breeders were represented by The Newton Farms, Massachusetts; Adam Seitz, Wisconsin; and Wendover Farms, New Jersey.

The bull classes were light in numbers but brought out some real classy individuals. In the aged bull class McMillan's Lessnessock Golden Love, grand champion at Ottawa this year, annexed the blue over the Newton entry, Cavalier's Kilnford Ringmaster. The McMillan entry was shown to a little better advantage. Both bulls scaled about 1900. The Newton entry was a trifle cleaner cut and better on his feet; the McMillan entry showing better in front, a trifle better in head and neck, and carrying his lines to better advantage.

Cavalier's Lord Roseberry owned by Seitz had no competition in the 3-year-old class.

In the two-year-old class last year's grand champion again demonstrated his worth, placing over the Ness entry, Holehouse Hopeful. Lord Stuart has the honor of winning first in his class for three consecutive years. He is by the former grand champion, Gay Cavalier, and out of that great show cow, Carston Lady Mary Stuart.

In the special class for bulls two years and over, Lord Stuart was awarded first place, winning over Lord Roseberry and Lessnessock Golden Love.

The yearling bull class brought out two entries, Nancy's Mintmaster owned by Wendover Farms placing over the Ness entry, Burnside Denty Piece. Nancy's Mintmaster was easily the outstanding entry of the show, a bull of great scale, wonderful quality, and perfect lines, carrying a great middle and wonderful strength of shoulder. He was first prize senior calf last year and has developed exceedingly well.

Admiral Beatty of Wendover, owned by Wendover Farms, a bull of great quality, topped the senior bull calf class with the Seitz entry, Cavalier's Netherhall Chancellor, in second place followed by Wendover's entry, May's Mintmaster of Wendover, McMillan's Springburn Ringmaster, and Newton Farms' Ringmaster's Braeburn Diplomat, five great young bulls. The Admiral is sired by Admiral Beatty, one of the greatest sires which ever left Scotland and which was lost while enroute to South Africa. The dam is last year's 3-year-old winner, Nethercraig Gay Lass, now on test and expected to make a record for the breed.

Newton Farms annexed the blue in the junior class with a youngster of great promise, Brae Burn Rising Tide. He is out of Nancy Whitehall, the cow which recently topped the Brattleboro sale and which promises to break the junior four-year-old record.

Senior champion was awarded the Seitz entry, Cavalier Lord Stuart, junior champion going to Wend entry, Nancy's Mintmaster. Th tle for grand champion brough two American bred animals, b great merit. Last year's grand pion, however, had to take place to the Wendover entry, N. Mintmaster. The Seitz entry h developed in scale as much a younger bull and was excelled in ity and style and depth of flank the second year in successio American bred animal wins th preme male championship.

In the female classes compet was not as keen as in former except in the younger classes. Th nadian entries made a sweep i aged class, Ness winning first an ond on his Imp. Harleyholm Ros and Champanton Henney and M lan placing third with his dry Maple Leaf Jean, Wendover foll in fourth place with the A. R. White Heather of Torr. Harle White Rosie 3rd already had grand champion of Canada. Sh cow of good scale, not just as s in rump but with lots of consti and capacity and a splendid with good sized teats. The McM entry showed to a disadvantage ing dry but is an animal which, condition, would be hard to beat.

The four-year-old and three-old classes were won by Wendov Wylieland's Clementine and Ne Burnside Barbara. These classes not over strong.

In the two-year-old class the j had a problem, finally placin McMillan entry, Auchenbrain E 37th, over the Seitz heifer, Kil Dorothy, scale and udder being preference over quality in this Wendover exhibited two he both dry and a trifle highly ditioned, but the judges gave p ence to the fresh animals.

In the senior and junior yea Wendover won both blues, the c being extremely strong. Seitz back strong in the heifer calves, ning first and second and four the senior and first in the junior.

The calf classes were exceptio strong throughout.

The groups were all in favor Wisconsin exhibit, Seitz wi first in all groups except the a bled herd of 12 animals which to the Canadian exhibit of M Ness and McMillan.

The senior champion cow easily won by the Ness aged cow, leyholm White Rosie 3rd, which ly was awarded grand champi the show over Seitz's junior cham Cavalier's Hillhouse Rosebud. leyholm White Rosie 3rd is thus champion of Canada and the U States. She was sold at the England sale in 1916 and import Hunter & Montgomerie and is c by R. R. Ness of Quebec.

In the A. R. classes Wendove first on Hobsland Miss May i junior class while McMillan's Leaf Jean won the blue in the class.

Professor H. H. Kildee, Iowa Wm. Hunter, Ontario, placed awards.

Bull 4 years or over—1, McMillan o Lessnessock Golden Love; 2, Newton on Cavalier's Kilnford Ringmaster. years and under 4—1, Seitz on lier's Lord Roseberry. Bull 2 years and 3—1, Seitz on Cavalier's Lord Stua Ness on Holehouse Hopeful. [illegible]enior and Grand Champion Cow—Imp. [illegible]leyholm White Rosie 3rd. Junior Cham[illegible]n Cow—Cavalier's Hillhouse Rosebud.

[illegible]reeder and Exhibitor Winner of Most [illegible]ney—Seitz.

Holsteins

[illegible]Exhibitors: A. R. Black and Sons, [illegible]chigan; Chestnut and Sons, Kan[illegible]s; Cass Farms, Iowa; Daisy Hill [illegible]rms, Ohio; R. E. Haeger, Illinois; [illegible]yowood Farms, Minnesota; M. R. [illegible]ans, Illinois; and Mrs. Forest C. [illegible]igner, Ohio. Total number of ani[illegible]ls exhibited 72.

Judge: W. S. Moscrip, Minnesota.

[illegible]Three bulls were shown in Class [illegible]e, and Johanna Bonheur Cham[illegible]n 2nd was an easy winner. The [illegible]andam of this bull was Johanna [illegible]nheur, owned and bred by W. J. [illegible]llett, and she was one of the finest [illegible]e cows we have ever seen. She was [illegible]o capable at the pail. Her grand[illegible]n shows the effects of her blood and [illegible]licates that it is not impossible to [illegible]mbine beauty of form and produc[illegible]n in the same animal, and to trans[illegible]t these characteristics to coming [illegible]nerations. Johanna Bonheur [illegible]ampion 2nd was also senior and [illegible]and champion. Since W. S. Moscrip [illegible]ed this animal he asked Peter Small [illegible] Ohio to judge this class.

Johanna Bonheur Champion 2nd [illegible] owned by Chestnut and Sons of [illegible]nsas and he was the only animal [illegible]ibited by them. His winnings are [illegible] compliment to their judgment of [illegible]lstein type.

[illegible]The wonderful show cow, Minerva [illegible]ets, owned by R. E. Haeger, was [illegible]nner in her class and grand cham[illegible]n. She won this honor so many [illegible]es that she can well retire from [illegible]e show ring as being undefeat[illegible] and with the title of cham[illegible]n of champions. Haeger's herd [illegible]ovides severe competition in all [illegible]sses, but he was forced to yield [illegible]st place in several classes to his op[illegible]nents. His 3-year-old heifer, Nancy [illegible]lamo Korndyke, met no competition [illegible]t she is one of the best individuals [illegible]it entered the ring. She is a heifer [illegible] great dairy capacity and a consti[illegible]ion capable of sustaining it. She [illegible]of beautiful conformation. Her ud[illegible]r is a little defective in that it is cut up between the quarters, that is, it is not level on the bottom.

The Holstein exhibit was not large, but there were a number of outstanding animals. The mature classes were not as well filled as usual and consequently there was not the sharp competition which has characterized the Holstein exhibit in former years.

The awards follow:

Bull 4 years or over—1, Chestnut & Sons on Johanna Bonheur Champion 2d; 2, Haeger on Paul Calamo Korndyke; 3, Mayowood Farms on Johanna Ondine Grahamholm Lad. Cold Storage of Cottage Cheese

H. B. ELLENBERGER, Vermont Experiment Station

MUCH has been said and written during the past year about the economics of making and eating cottage cheese both to conserve skimmilk and to save meat. Specialists on State Extension Staffs and from the Dairy Division and Bureau of Markets of the United States Department of Agriculture have worked hard during the past few months to encourage the manufacture and consumption of this cheese. Their efforts have met with a large measure of success, for both production and consumption have increased, but they are greatly handicapped by the fact that at this season of the year a shortage of skimmilk often renders a steady supply of cottage cheese impossible.

Such a shortage probably does not exist in all sections but it is very noticeable in the New England States. A like condition existed last winter when there was a ready market for all the milk which these states produced, but beginning with March a surplus appeared and continued to increase in volume until the latter part of June, by which time there were hundreds of thousands of pounds of skimmilk which daily went begging for market. Much of this was disposed of at a ridiculously low price and reports state that considerable quantities were run down the sewer because it could not be profitably marketed. This was no fault of the cottage cheese specialists for they were busy doing all they could to prevent any waste and to find a profitable outlet for this by-product, but they were swamped by the flood of skimmilk on the one hand and the lack of sufficient market on the other.

Of the New England States, Massachusetts, Connecticut, and Rhode Island are considered as the principal consuming districts, and parts of Maine, New Hampshire, and particularly Vermont, as the heavy producing section. Therefore these northern states, especially Vermont, had a great deal of skimmilk which they were ready to sell as cottage cheese to the consumers in Massachusetts and Connecticut. However, when they began to look for this market it was found that these states themselves had surplus milk and were for the most part keeping their local markets supplied with all the cottage cheese they would consume. Thus there was little or no outlet for cottage cheese from Vermont and when it could be sold, offerings were so liberal that the price offered dropped to a point which left no profit for the producer. Sales of cottage cheese were made which returned not more than forty cents gross per 100 pounds of skimmilk. After deducting the cost of making and marketing from this, is it much wonder that some concerns preferred to "market" via the sewe

With returns so low many plan felt that they could not afford to to the expense of pasteurizing a otherwise caring for the milk in manner necessary for the producti of cheese of the best quality. T manufacturing specialist then h not only a glutted market but also oversupply of cheese of poor qual to contend with, and under such c ditions he could do little in the w of improving the quality.

Late in August this surplus m disappeared and very little was av able for cottage cheese even thou the price offered has in some ca doubled.

Cold Storage a Possible Solution

Next year, and for years followi it is probable that this same seaso variation in supply will exist as it l for years past. Not so long ago t same situation applied in a great me ure to butter and eggs, though th products are less perishable than c tage cheese. Cold storage has revo tionized these and many other lines business by making possible the ho ing of stock produced in the fl season for use during the months low production, and it seems to writer that since it is absolutely

THE FIRST CARLOAD OF JERSEYS BROUGHT TO NORTHERN ALABAMA BY THE DECATUR ICE CREAM & CREAMERY CO.

These cows were bought and paid for by this creamery and sold to farmers at actual cost plus expense of buying. The fact that they were sold within 30 minutes shows that farmers in this section are becoming interested in dairying.

possible to profitably market for mediate consumption all the cott cheese which can be produced dur the spring and early summer, t the ultimate solution of this perp ing problem is to put cottage ch in storage during these months, t taken out for consumption in fall and winter when there is no plus skimmilk from which to ma facture such cheese. If this can done it will tend to stabilize market, since the demand will vastly increased during the sto season, which will insure that producer will receive a reason price for his cheese and the consu will then be able to secure cot cheese throughout the whole yea

Trials inaugurated by the write the Vermont Experiment Station dicate that it is practical to hold cheese frozen in cold storage several months. These trials, th only preliminary and not conclu were so satisfactory that results given below. Many trials on a la scale have been started and a siderable quantity of this ch packed for the most part in b tubs, is now stored and it is h that data on these lots will be a able before the flush season spring.

The Cheese Stored

Several lots of skimmed and w milk were made into cottage, N chatel, and cream cheeses which, being sampled and analyzed, placed in cold storage where

re kept frozen. The room temperare where they were held was maintd at 14 degrees to 16 degrees renheit. This of course requires aificially cooled storage. Some of tl cheese was allowed to develop a th acid during the making process al some was made up in as sweet a condition as possible. Other lots we divided, part being made up vy moist and part quite dry. (tage cheese was made by both tl bakers' and pot methods. Seral packages from some lots we placed in storage, and each nth one of these packages was moved and examined for flavor and geral quality, the last package bei held for four months. Most of t lots comprised only one package. Eh were held for the full four nth period.

Effect of Storage on Flavor

The flavor of most of the samples stored cheese when thawed out s only slightly altered, the only areciable difference in most cases bg that after storage its flavor sned to be a little sharper or more t acid. Such cheese as had a poor flor when fresh deteriorated more tln did the better lots, in some cases tl poor or off-flavors seeming to be sewhat accentuated by storage. Te flavor of those samples which ctained a high percentage of rsture was somewhat poorer than tlt of dryer lots made from the se curds. The unsalted samples in mt cases were a little more tart tln those which were salted.

Cottage cheese made by the pot thod retained its flavor a little ber than did that made by the kers' method. Practically all aples of Neufchatel were about s good when removed from storage s when they were stored. The crean se developed some metalic flavor. ese stored in small retail packgs did not keep quite so well as h stored in larger containers.

ome of this storage cheese, after g thawed out, was repacked into ll retail packages. Persons who w nothing of its history prnced it "fine". Several on being afterwards that it was storage se stated that they could not tell rom fresh. Some of these persons e expert in judging dairy prodc.

y Texture and Keeping Quality

he texture of many of the aples was somewhat changed by zing. Cottage cheese made by the method became a little more ny and crumbly as did also very Neufchatel. When very moist age cheese made by the bakers' ess was stored it became a little y and leaked somewhat when it thawed out, but medium or dry se from the same curd showed tically no change. Dry curds r being softened with a little et whole or skimmilk, could hardly detected from fresh curds. This tice may also help the flavor.

he keeping quality of these cheeses r being removed from storage was aps not quite as good as that of h cheese, though several lots e kept at ice-box temperature for ods up to ten days and were pronced as good as fresh cheese kept a similar time. The high moisture ples deteriorated faster than did e which were dryer.

l Development During Storage

ach lot of chesse was tested for just before entering and again r it was thawed out. The acid ent was determined by washing grams of finely divided cheese water at 40 degrees Centigrade, ing up to 105 cc, filtering and ting 25 cc portions of the filtrate. results from several samples vn in the following table indicate the acid increases very little if during storage:

Kind of cheese	Per cent acid when stored	Per cent acid after storage
Cottage (Bakers')	.54	.55
" "	.54	.54
" "	.58	.59
" (Pot)	.47	.47
" "	.44	.40
" (Bakers')	.41	.43
Neufchatel	.38	.36
"	.38	.36
"	.40	.40
"	.40	.40
"	.45	.43
"	.45	.47
Cream	.45	.40
"	.36	.33

General Observations

When storing in this way it is very important that cheese be selected which has been properly made and which possesses a desirable clean, mild, acid flavor. It is advisable to make the cheese from pasteurized milk. The best results cannot be expected when cheese with off-flavors, high moisture, or very high acid is stored.

It is also important that the cheese be placed in storage as promptly as may be, before any deterioration becomes apparent. It is better to put the cheese in storage at or near the place of manufacture rather than to ship it a great distance, especially in hot weather when more or less unfavorable fermentation may set in. The cheese may then be removed from storage and shipped to market in a frozen condition, if desired. It should not be thawed rapidly since high temperatures cause leakage.

The cheese should be over-dry rather than over-moist, for the reason that dry cheese may be moistened by working in sweet milk which also imparts a desirable flavor, whereas the texture of a very soft cheese cannot be readily improved even if the flavor is good. Cheese of a poor quality should not be stored; only the best should be selected for this purpose.

American Names for Holsteins

HOARD'S DAIRYMAN:—In your issue of September 6th, J. F. Bruins, Idaho, writes on "Christening the Holstein Calf". Mr. Bruins takes the position that the Holstein-Friesian cattle are Holland cattle. To be sure, a great many black and white cattle have been imported from the Netherlands in the past, but I believe I am correct in saying that there are comparatively few Holsteins imported at the present time. We have bred and developed them in this country until they are American cattle, not Holland cattle.

With all credit to the Hollander for the origin of the breed, the Holstein-Friesian cattle of this country are American cattle just as truly as American born children from parents of foreign birth *should be* Americans not Germans or Norwegians.

I will agree that we would not call an Irishman Wilhelm O'Brien; neither would we call a girl of Dutch parentage, Katrina, in this country; but we would call her Katherine. So why use the prefixes, "Arouw", "Juffrow", "Held", "Konig", "Mustes", "Mynhur", or any others of foreign origin when the American equivalent is so much more simple. Some of the names already in use are sufficiently hard to pronounce without adding such as "Berendina", "Geezina", "Oueryssel", "Orenthe" and "Oldenbarnveld".

Windsor, Wis. R. E. W.

Jersey Cattle Notes

For week ending Oct. 18, 1918:

Number of animals registered: Bulls, 94; cows, 430; total, 524. Number of transfers recorded: Bulls, 121; cows, 296; total, 417.

THE most convenient and dependable iron to iron with is a self-heated Carbide gas iron. The farmer's wife who lights her house and does her cooking with Carbide gas can do the family ironing with the same gas burned inside the iron.

The farmer was the first to profit by the discovery that by putting a little Union Carbide (like crushed lime) into a generator about once a month with some plain water, he could have all the home-made gas he could use for lighting, cooking, and ironing.

Of course he found out that Carbide gas was far superior to city gas—more powerful light—richer, whiter, softer—and he told his neighbors.

He told his neighbors so effectually that Union Carbide today supplies the light in over 250,000 country homes.

Some of his neighbors were miners. A miner's Carbide lamp was invented to meet their demands. Today, Union Carbide supplies the light in over 700,000 of these miners' lamps.

About the same time metal workers and machinists discovered they could weld and cut metals quicker and more economically with Carbide gas (when combined with oxygen) than by any other method.

And contractors, stevedores, and other night workers were quick to adopt Union Carbide for flare lamps and torches.

Thus by natural stages Union Carbide has become a powerful factor in all branches of industry.

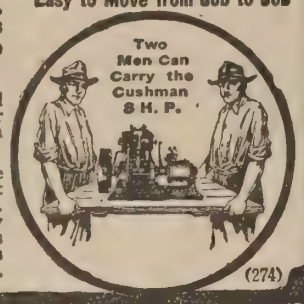
60 lbs. per H.P.



That's Enough for Any Engine to Weigh

Before you consider buying any engine, find out how much it weighs. If it weighs more than 60 pounds per horsepower, it is too heavy for farm work.

No longer is it necessary for you to drag around big bulky engines weighing several hundred pounds per horsepower. They represent a waste of material, a waste of time and energy, and a waste of gasoline.

The Cushman has proved that an engine may be balanced so carefully and governed so accurately that it does not need a large base and heavy moving parts. Cushman Engines run much more steadily and quietly than ordinary farm engines weighing several times as much. No loud explosions—no fast-and-slow speeds—but smooth, steady power like automobile engines.

Easy to Move from Job to Job

(274)

CUSHMAN
LIGHT WEIGHT ALL PURPOSE FARM MOTORS

4 H. P. on Binder

Weigh Only One-Fourth as Much

as ordinary farm engines. Light weight and higher speed mean **more jobs, easier handling, less waste of material and fuel and steadier running.** Cushman Engines are the standard light weight engines of the world.

4 H. P. weighs only 190 lbs., being only 48 lbs. per horsepower. This is the most useful farm engine ever built. Besides doing all ordinary jobs, it may be attached to any grain binder, saving a team, and in a wet harvest saving the crop. Also it may be used on corn binders and potato diggers. Very easy to move around from job to job.

8 H. P. weighs only 320 lbs., being only 40 lbs. per horsepower. For all medium jobs. Also may be attached to hay presses, corn pickers, saw rigs, etc. 8 H. P. and larger Cushman Engines are all double cylinder.

15 H. P. weighs only 780 lbs., being only 52 lbs. per horsepower. For heavier farm jobs, such as 6-hole corn shellers, ensilage cutters, large feed grinders, small threshers, etc.

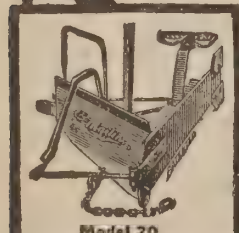
20 H. P. weighs only 1200 lbs., being only 60 lbs. per horsepower. For heavy duty jobs, such as shredders, shellers, grain separators, heavy sawing, etc.

8 H. P. on Hay Press

Cushman Engines stand up under wear and tear and do not wear unevenly and lose compression. Every running part enclosed free from dust and dirt and properly lubricated. Equipped with Throttling Governor, Carburetor, Friction Clutch Pulley and Water Circulating Pump. Ask for Book on Light Weight Engines.

Cushman Motor Works 817 N. 21st Street Lincoln, Nebraska

DO YOUR DITCHING NOW



You imperil your next year's crops, your next year's profits, if you let fall and winter rains stand on your land. Give your land a chance to keep breathing. Do the farm ditching and terracing **now.** Do it the quickest way, the cheapest way, the easiest way.

Use the Most Rapid Farm Ditcher, Terracer and Road Grader

The Martin O D & G Co

All-steel—Reversible—Lasts a Lifetime. Cuts a V-shaped open-drain, irrigation or tile ditch down to 4 feet. Cleans old ditches. Builds farm terraces, dikes, levees, and grades roads. Works in any soil — wet or dry. Does work of 100 men the old way. Write for free copy of valuable Drainage, Irrigation and Terracing Book and Special Introductory Offer.

The 1918 National Dairy Show

(Continued from page 475)

bred. The illustration found in this issue shows him as he appears this year. The grand champion cow, Imp. Bella 2nd du Grand Fort, is a new contender for national honors, but she is worthy of the place given her. She is not only a cow of dairy talent, but she has a refinement and a type that is highly commendable.

Another cow worthy of special mention is Pearl's Dot, owned by D. D. Tenney. She is a splendid type, strong constitution, and a capable producer, holding third place in the Advanced Registry in Class GG.

W. W. Marsh, who may well be considered the veteran showman of the Guernseys at the National, did not bring forth this year a full show herd. He confined his efforts to the younger classes and there his opponents found difficulty in dislodging him. Mr. Marsh has a keen eye for good Guernseys and he seldom shows an animal that does not do credit to him and his breed. It is a compliment to his opponents to be able to give him the competition which he met this year. The quality of the Guernsey exhibit on the whole was very good, but the small number did not make the impression made in other years.

The awards follow:

Bull 4 years or over—1, Tenney on Ladysmith's Cnerub; 2, Lehmann on Pinecrest King France; 3, Island Farm on Gold Lassie's Julian. Bull 2 years and under 3—1, Mountain Bros. on Kitchener's Express; 2, Raemelton Farm on Buttercup's Raemelton Boy; 3, Davis Farm on Densie's Masher. Bull 1 year and under 2—1, Marsh on Cherub's Prince; 2, Island Farm on Maxim of Linda Vista; 3, Raemelton Farm on Raemelton's Golden Noble; 4, Lehmann on Mixter Penrod of Bon Ayre. Bull calf 6 mos. and under 12—1 and 2, Marsh on Marie's Cherub of the Prairie and Lily du Preel Prairie Gold; 3 and 5, Island Farm on Beda's May King of Island Farm and Starlight's May Rose King; 4, Tenney on Cherub's Sergeant of Shorewood; 6, Raemelton Farm on Raemelton May Rose General. Bull calf, under 6 mos.—1, Island Farm on Princess Jewell of Island Farm; 2, Tenney on Cherub's Corporal of Shorewood; 3, Marsh on Alyssum's Cherub.

Cow 5 years or over—1, Island Farm on Imp. Bella 2nd du Grand Fort; 2 and 3, Lehmann on Rag Apple and Imp. Rose of Les Prevosts II. Cow 3 years and under 4—1, Tenney on Pearl's Dot; 2, Island Farm on Starlight May Rose; 3, Lehmann on Raymond Princess. Brown Swiss

Exhibitors: Hull Bros., Ohio; W. O. Bohart, Montana; L. S. Marsha & Sons, Michigan.

Judge: Hugh G. Van Pelt.

Three Brown Swiss breeder brought 53 animals into the rin which beats the last year's entry 30 animals by two exhibitors but di not equal the record of the 191 Springfield show of 101 anima shown by six exhibitors. A new e hibitor, Mr. W. O. Bohart, brough his herd all the way from the sta of Montana despite the fact that could not hope to make his expens with the best possible winnings. Whi he did not win out largely, he mad the experienced and veteran show men from Ohio and Michigan yie the purple in three classes.

The Marsh all aged bull, Stasis Bo of Sedgeley, repeated his last year performance by defeating Hull Bros Dick of Lake View in the aged bu class, later taking grand champio ship. At the Iowa Dairy Cattle Co gress his young stablemate, Edga L, took grand championship from t older bull, but at the National could not even enter the ring f grand championship as he had bee beaten for junior champion by t Hull Bros.' junior calf, Harold Swiss Glenn.

Swiss Valley Girl 7th, grand cham pion at previous shows, is growin old and it is "on with the new and with old". Her deep, long body, we developed milk veins, and large u der still indicate dairy quality, b she had to yield senior championshi to the Hull Bros.' 4-year-old, Re ben's Ruth. The latter cow showed better formed udder, the bloom youth, and the wise ones along t ropes said of her, "there comes a re cow". Indeed, according to the judg she more nearly than any other ent approached the desirable Brown Swi type. Later she gracefully accept the grand championship honors.

The list of awards follows:

Bull 3 years or over—1, Marshall & So on Stasis Boy of Sedgeley; 2, Hull Bros. Dick of Lake View; 3, Bohart on Colle Masher. Bull 2 years and under 3—1, H Bros. on Vogel's College Boy; 2, Marshall Sons on Marcus; 3, Bohart on Nick's Pr Easter. Bull 1 year and under 2—1 and Bohart on Moose and Alice's Master 2nd; Hull Bros. on Supreme of Lake View; Marshall & Sons on Bravura's II Grands Bull calf 6 mos. and under 12—1, Marshall Sons on Edgard L; 2 and 3, Hull Bros. Irene's Reuben and Mamie's Ethel B's Milli Reyno. Bull calf under 6 months—1, H Bros. on Harold of Swiss Glenn; 2 and Bohart on Beauty C's. N. M. and Master's

Cow 5 years or over—1 and 2, Hull Bros. Swiss Valley Girl 7th and Ruth H. 4th; Marshall & Sons on Brownie F. Cow 3 ye and under 5—1 and 3, Hull Bros. on R ben's Ruth and Bessie May 2nd; 2, Marsh & Sons on Betsy Girl. Heifer 2 years a under 3—1, Bohart on Master's Lady D. 2n 2 and 3, Marshall & Sons on Jackson La and Valley Girl M. Heifer 18 months and der 2 years—1 and 2, Marshall & Sons Betsy Girl Bravura and Beaut's Bravura; Hull Bros. on Belle of Lake View. Heife year old and under 18 months—1, Bohart Brownie's Perfection; 2, Hull Bros. on N of Lake View. Heifer calf 6 months old under 12—1, Hull Bros. on Lottie G. D. Lake View; 2 and 3, Marshall & Sons Styx 2nd and Minnie 2nd. Heifer calf un 6 months—1 and 2, Marshall & Sons on Be 2nd and Mollie 2nd; 3, Hull Bros. on Cind ella of Lake View.

Official Record Cows—Senior: 1, Marshall Sons on Brownie F; 2, Hull Bros. on Sw Valley Girl. Junior: Marshall & Sons Betsey May; 2, Hull Bros. on Bessie May; Bohart on Zell's Beauty.

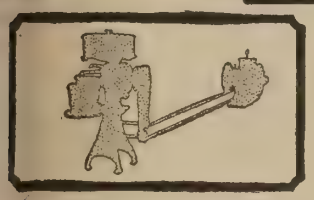
Exhibitor's Herd—1, Marshall & Sons; Hull Bros.; 3, Bohart. Young Herd—1, M shall & Sons; 2, Hull Bros.; 3, Boh Breeder's Calf Herd—1, Marshall & Sons; Bohart; 3, Hull Bros. Get of One Sire and 3, Marshall & Sons; 2, Hull Bros. P duce of One Cow—1, Hull Bros.; 2, Marsh & Sons, 3, Bohart.

Senior and Grand Champion Bull—Sta Boy of Sedgeley. Junior Champion Bu Harold of Swiss Glenn.

Senior and Grand Champion Cow—Reube Ruth. Junior Champion Cow—Beaut 2nd.

Breeder Winner of Most Money—Hull B

America must literally feed t world during the war and at the sa time prepare to rebuild the worl food supplies when victory brin peace.



ot a Farm ngine? Good!

Students' Judging Contest

The 10th Annual Students' National Contest in judging dairy cattle was held at the National Dairy Show at Columbus, Ohio, October 11, 1918. The contest was open to teams of three men each from all agricultural colleges, but owing to the enrollment of practically all male students in the military forces of the nation only three colleges—Cornell, Ohio, and Nebraska, were able to send full teams of three students each. A fourth college, South Dakota, sent two men to compete as individuals. One of the noteworthy features was that Cornell University entered a woman student. This was the first time in the history of the contest that a woman had contested with the male students for the honors of the judging ring.

Twelve animals of each of four dairy breeds were judged; namely, four bulls, four cows, and four heifers, and the students were required to place these animals in their proper order of excellence. Their placing was then compared with the official contest placing which was determined by a committee consisting of the coaches of the various teams. This committee was composed of Professors H. H. Wing, Cornell; C. T. Conklin, Ohio; Eli Duncombe, Nebraska; and Robert Wylie, South Dakota.

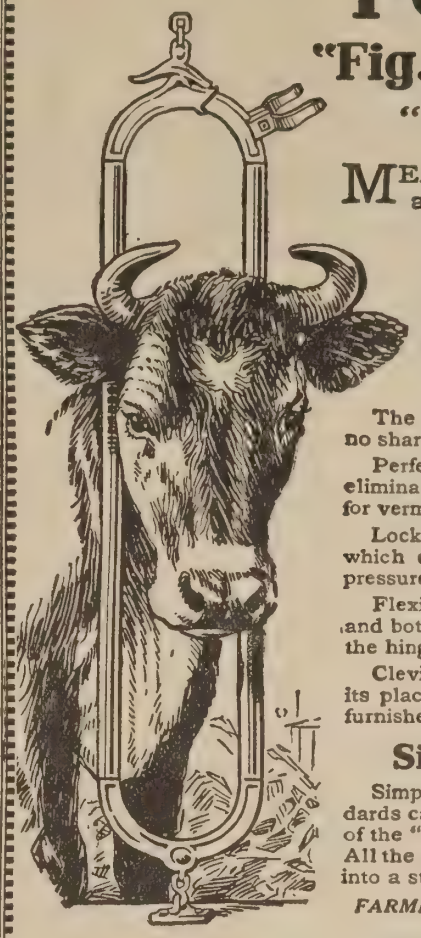
The Iowa Dairy Separator scholarship offered by the Associated Manufacturers' Company of Waterloo, Iowa, was won by the University of Nebraska, whose team stood highest in judging all breeds.

The DeLaval scholarship offered by the DeLaval Separator Company was won by M. N. Lawritson of the University of Nebraska for doing the best work in judging all the breeds.

The Holstein-Friesian scholarship offered by the Holstein-Friesian Association of America to the student standing highest in the judging of Holsteins was won by Elizabeth R. Cook of Cornell University.

Hoard's Dairyman and National Dairy Association cups for the best all-around judging were won by the University of Nebraska; the J. B. Ford cup by the New York State College of Agriculture; the Ayrshire cup by the University of Nebraska; and the Guernsey, Holstein, and Jersey cups by New York State College of Agriculture.

The National Dairy Association awarded gold medals to the five highest or sweepstakes winners in judging all breeds as follows:



1. M. N. Lawritson, Nebraska; 2. Carl H. Powell, Nebraska; 3. Lowell S. Huntington, New York; 4. Daniel J. Carey, New York; 5. Elizabeth R. Cook, New York. HELMER RABILD,
Superintendent of Contest.

Dairy Cattle for Texas

HOARD'S DAIRYMAN:—It is announced that 350 high bred dairy cattle are to be purchased for the farmers of various counties of Texas by C. M. Evans, animal husbandman and R. L. Pou, dairy husbandman of the extension service of the Agricultural and Mechanical College of that state. They recently left for Columbus, Ohio, to attend the National Dairy Show. From there they will be joined by county agents from several Texas counties who will assist in the purchases for the farmers of their territory. The extension workers hold orders for several individual farmers in counties in different sections of the state and about 100 head of the dairy cattle purchased will be taken to College Station, Texas, and inoculated against the Texas fever at the veterinary hospital.

Texas. W. D. HORNADAY.

PORTER'S
"Fig. 20" Stanchion
"Comfortable Cows"

MEANS healthy cows—more valuable herds. Porter's "Figure 20" Stanchion is designed after ideas that only Porter experience and investigation can produce, and for that reason is the ideal stanchion, comfortable, sanitary, durable, convenient.

The "Figure 20" is made of round tubing; no sharp corners to injure the animal's neck.

Perfect fit and smoothness at the joints eliminate catching places for dirt and refuge for vermin.

Locked at the top with a cow-proof latch, which can be opened by mere downward pressure of the hand.

Flexibility given by chains at both top and bottom. Extra large bearing surface at the hinge insures long life.

Clevis and bolt hold the hinge firmly in its place. A stanchion holder is regularly furnished with each stanchion.

Simple and Durable

Simplicity and Durability are Porter standards carried out in design and construction of the "Figure 20." Convenience it has too. All the good qualities, in fact, that can be put into a stanchion.

Over there Over here

THROUGH mud and rain, through gas and shrapnel, our boys are pushing on to Victory. It's a task that tries the souls of strong men. They ***must*** have rest and recreation.

At the canteens, they buy the little comforts of life at cost. In the war-service huts, they find everything needful to write the letters you receive. They attend a show, see a "movie" or hear good music—all free. Always, they find in the hut secretary a friend. They forget for a little while the grim scenes of war and return to duty refreshed. These are some of the things that keep fighting men at top notch.

YOURS is the task of growing the food these fighting men must have. The toiling millions in the munition factories, arsenals and shipyards also look to you for sustenance. And they do not look in vain.

Your work is vital to winning the war and you are doing it manfully, mindful of Country, forgetful of self. You are working early and late, putting forth your strength unsparingly. You have produced bounteous crops that feed a hungry world. Yet to you are spared the comforts of home and the presence of loved ones. Yours are the privileges of earning and giving.

Give to "keep good men good and brave men strong". Give to bring cheer to those who are daring their all for you and yours. And when the boys come home victorious, you can honestly say, "I have done my part, too. I have backed you to the limit."

Seven allied activities, all endorsed by the Government, are combined in the United War Work Campaign, with, the budgets distributed as follows: Y. M. C. A., $100,000,000; Y. W. C. A., $15,000,000; National Catholic War Council (including work of the Knights of Columbus and special war activities for women), $30,000,000; Jewish Welfare Board, $3,500,000; American Library Association, $3,500,000; War Camp Community Service, $15,000,000; Salvation Army, $3,500,000.

Hoard's Dairyman

Silage from Soft Corn

HOARD'S DAIRYMAN:—Statements have been frequently made that if corn is hit by frost before it reaches maturity the best way of saving it is to store it in a silo. The experiences of last year proved the truth of this statement to a multitude of farmers, farmers who have put up silage for years but who did so with a good quality of well matured corn in the years before. But from our experience last year, which tallied with that of most other farmers, I think the above statement needs to be qualified: A poor quality of silage may result from inmature frosted corn if it is not put up soon after it is frosted.

A poor, and I believe, unpalatable quality of silage can be made from inmature frosted corn if siloing is delayed and a period of warm weather follows the frost. When the frost strikes the corn the life processes of the plant practically cease, and as the functions of the plant are interrupted prematurely vegetable decay sets in. Still in the growing or developing stage it is full of juices which begin to ferment in the warm days that follow. Last year one could go into the cornfields a few days after the early frosts and smell the odor of this ferment in the air; in some fields it was absolutely sickening.

Immature corn is not the best to put into the silo, though I well remember the time when this was the recommended stage in which to silo it. It made good silage and was excellent feed for dairy cows especially. I am going to give here some extracts from my "Farm Notes" of last year:

"Sept. 14.—Corn is showing effects of the frost of the 11th. Some in low ground was hit heavily, and all the corn shows a browning of the husk and drying of the silk as if the frost were helping to ripen it without its fully maturing. Many grains on tips have turned a bright green. Probably 50 per cent of our corn is in the milk or hard dough stage, the rest being dented."

"Sept. 21.—Corn in about the same stage as it was on 14th, though the warm weather and rain yesterday is helping it to ripen a little. A faint sour odor in the low ground evidences fermentation of the plant juices setting in. Practically all the blades have a dead greenish color."

On the 28th we began to put this corn into the silo, when about one-fifth of it was in the milk stage. I will not quote my farm notes here as they are too lengthy, but they show that "all the leaves and stalks were green and juicy, some of the husks were dry and the silks brown."

This was very good corn and would have made 65 bushels per acre but for the frosts that followed. The cutter was adjusted to cut it into one-half inch lengths. This was small enough as the greenness and juciness of the corn made it pack well so as to exclude the air. To insure it keeping in good condition we hitched a length of three-fourths inch iron pipe onto the pressure system and ran a slow stream of water into the blower, which probably made a good one-half inch stream. It might be thought that this made a rather slushy quality of silage, but such was not the case. It packed evenly and firmly, and water was used throughout the entire filling.

This corn was put in just seventeen days after the first frost, but I believe it would have made better silage if it had been put in the first week after the frost. It made very good silage but the stock did not seem to clean it up in their boxes as well as they did the silage of former years. It had no sour odor when we began feeding it, the ferments of the silo having probably destroyed what little there was in the field.

There is another point I think well

Convenience—Comfort—Luxury

Good Plumbing—"Standard" fixtures—should be in every home which has running water. The family should have the luxury and comfort of these modern conveniences in Bath, Kitchen and Laundry.

"Standard" Plumbing Fixtures

If you have running water or expect to build or remodel, with a water supply, consult your contracting plumber. Ask about "Standard" fixtures. They represent highest quality; are the product of long manufacturing experience and offer a wide variety of styles. Look for the "Standard" Green and Gold Label. See that it is on the plumbing fixtures you buy. It is an assurance of satisfactory service.

Write for book, "Standard" Plumbing Fixtures for the Home."

HARRY D. BAKER.
Box A. St. Croix Falls.

orth mentioning here. In the lower alf of the silo was put one-half of a eld of corn and soy beans, the upper alf being filled with straight corn. 'e have always used this combin- ion of corn and soy beans, finding it akes a superior quality of silage, as carries a higher per cent of protein atter than straight corn and the soy ans have a tendency to neutralize me of the acids of the corn. On aching this lower strata of corn d soy beans the cattle seemed more ger for the silage and usually eaned up their boxes of all feed. hile we could detect very little, if y, difference in the odors of the two nds of silage, it may have been that e soy beans had a tendency to sweet- the silage and improve its pala- bility by counteracting some of the ids formed in the corn.

If this immature frost-bitten corn d stood in the field another ten days two weeks I believe it would have ade a low grade of silage, for the ild weather following caused it to ur considerably where it was ex- ptionally soft. As some farmers are unfortunate as to have soft corn en in normal years, I believe they ll secure a better grade of silage putting the corn in within at the ost two weeks after the first frost. nce the general experience of last ar I have heard a number of others press much the same opinion.

Indiana. J. L. JUSTICE.

Ten Commandments of the French Consumer During the War

The spirit of France is strikingly own in the following ten command- nts which the French people have d given to them by the League of triots. With these as a standard in nerica, ultimate victory is sure:

"1. Do not forget that we are at r. In your smallest expenditures ver lose sight of the interests of the tive land.

"2. Economize on the products nec- sary for the life of the country: al, bread, meat, milk, sugar, butter, ans, cloths, leather, oil. Accept tions. Ration yourself as to food, thing, amusements.

"3. Save the products of French l, lest some day you deprive your ther, your son, your husband, who e shedding their blood to defend u.

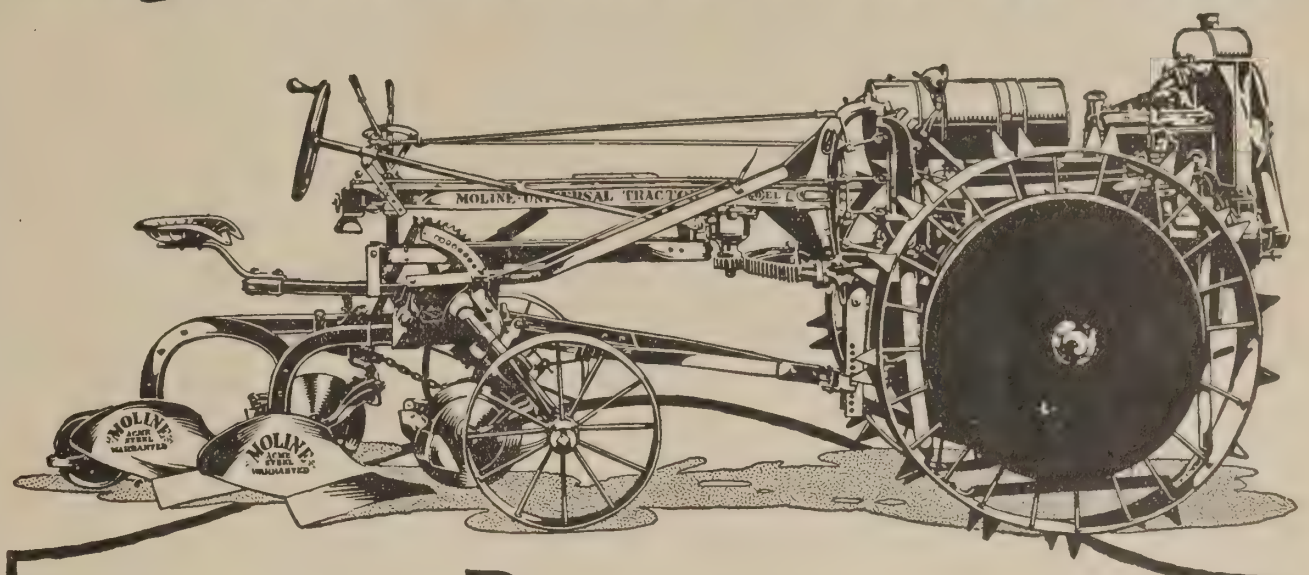
"4. Save the products that France st buy from foreign countries. Do t drain reserves of gold which are lispensable to existence.

"5. Waste nothing. All waste is a me which imperils the national de- se—prolongs war.

"6. Buy only according to your eds. Do not hoard provisions; your fishness raises prices and deprives se of smaller means of things lispensable to existence.

"7. Do not travel unnecessarily. flect that our trains are, before all, stined for the transportation of the ops, the feeding of the population, needs of our national production.

"8. Do not remain idle. According your age and your ability work for r country. Do not consume with- t producing. Idleness is desertion.



"9. Accept without murmuring the ivations which are imposed upon . Reflect upon the sufferings of se who are fighting for you, upon martyrdom of the population ose hearths have been devastated the enemy.

"10. Remember that victory belongs those who can hold out a quarter an hour the longest.

"That France may live, she must victorious."

Buy Your Moline Tractor Now

Because:

You may not be able to get a Moline-Universal if you delay ordering.

You will help relieve spring congestion of shipping by buying now.

You will have plenty of time to become familiar with its construction and operation before the spring rush and will be able to work your tractor in on belt work and other light jobs.

It is the only tractor which does all farm work including cultivating.

One man operates both tractor and implement from the seat of the implement where you must sit in order to do the best work.

Tractor and implement form one unit—backs as easily as it goes forward—turns in a 16-ft. circle.

It has plenty of power for your heaviest work, yet light in weight to operate economically on light jobs. All the weight on two big drive wheels—no dead weight—no extra expense.

Substantially constructed for many years of service.

Electric lights for night work and self starter for non-robust labor.

You can practically double your efficiency—you can produce more food with less help. You will need it, order now.

Write today for full information and name of your nearest Moline Dealer. Address Dept. 18.

World's Yearly Records Broken by Holsteins

Two Remarkable Daughters of King Segis Pontiac Count Emphasize Value of Selection in Choosing Herd Sires

FRANK T. PRICE, NEW YORK

TWO pure-bred heifers in the herd of Senator J. M. Hackney of Minnesota have just broken world's records for the yearly production of both milk and fat. This simultaneous and successful assault upon marks for production that have stood in one or two instances for several years, is of absorbing interest to dairymen throughout the country because of at least two outstanding facts in connection therewith. Both are daughters of the same sire, King Segis Pontiac Count. Both get their inheritance of production from this sire, for while their dams were pure-bred cows of ordinary ability, the sire has inherited through his two nearest dams a rich line of yearly producing ability that he has been able to transmit not only to these two remarkable heifers but in fact to his entire string of daughters.

Jewel Pontiac Segis has broken both the milk and fat records in the senior three-year-old class and the division for yearly production with the following records: milk, 27,068.5 pounds; fat, 936.9 pounds. This record marks the completion of Jewel's second lactation period. Her sister, Beauty Beets Walker Segis, breaks similar records for dual production in the senior two-year-old class yearly division, with these records: milk, 25,343.3 lbs.; fat, 832.5 lbs. She has had but one calf.

For some time back Holstein men have been watching with interest the work of this pair of wonderful producers for they have been breaking records since they began their careers. The yearly records they have been approaching and which both have succeeded in breaking have stood the longest of any among the Holstein records and with the establishment of a new record by Jewel Pontiac Segis, the Holstein completes a 100 per cent conquest of the dairy world's marks for milk and fat production for in her class, the senior three-year-old, a Jersey has hitherto been world's champion, while a Guernsey was second and the Holstein champion third. Thus the breed gains ascendancy over all others in every class for milk and butter production in both short time and yearly tests.

Jewel Pontiac Segis, the new record holder in the senior three-year class, has occupied the limelight as a producer before, for in her first lactation period as a junior two-year-old she repeatedly broke class and world's records for both milk and fat production in the short time and yearly test. At the present time, she has earned the distinction of holding more records in the regular divisions than any other cow of the breed. She has to her credit no less than eight world's records as follows: junior two-year-old, eight months after calving milk and fat, senior three-year-old, seven and thirty days milk, 305 days milk and fat and yearly milk and fat. In addition she holds the following world's records in division not recognized by the Holstein-Friesian Association with prizes: junior two-year-old milk and fat, 60 and 90 days; senior three-year-old milk and fat for 60, 90, and 120 days. She is the only heifer of the breed that has made two records in the eight months after calving division above 16 pounds of fat while under full age. She is the only cow of the breed to complete two yearly records before maturity that passed the 800-pound fat mark and the average of these two records is 892.1 pounds of fat and 25,551.5 pounds of milk, at an average age of only 39 months. She holds more world's and class records than any other cow of the Holstein, or any other breed, regardless of age or number of lactation periods. She shows no ill effects from her wonderful record breaking performances and her picture published in connection with this story shows Jewel as she is, a strong, capacious, efficient milk machine that evidently can stand the strain of continued consistent production and not break down under it. Jewel is rightly named for, to borrow a poetical expression, it may be said of Jewel Pontiac Segis: "Consistency, thou art a jewel."

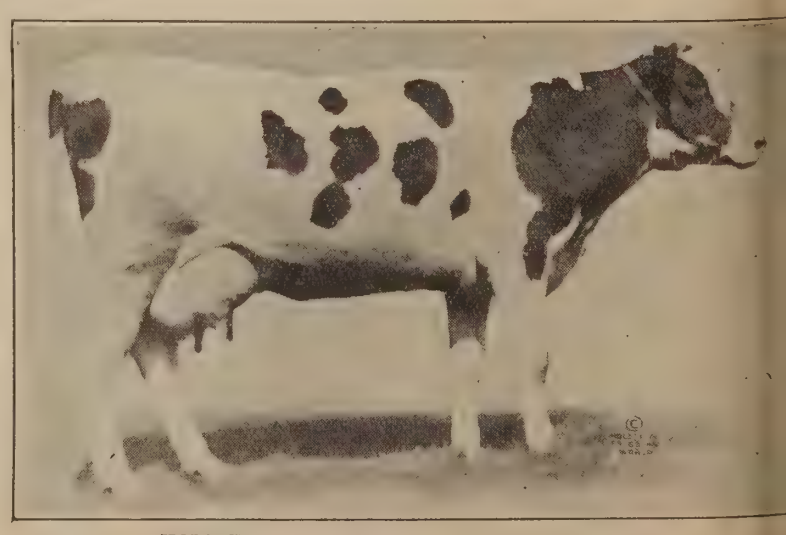
Of the younger of this remarkable pair it may be said that her performance is even more sensational than that of her older and more famous sister. To produce over 25,000 pounds of milk in one year is in itself a remarkable performance, one that not many mature cows have been able to duplicate. To couple that milk production with steady, persistent fat production makes the record stand out still more prominently. Beauty Beets Walker Segis is a first calf two-year-old but, unlike Jewel, she freshened in the senior while the former dropped her first calf in the junior class. From a study of the table given elsewhere which gives the records made by both these heifers in their two-year-old forms, some interesting comparisons may be drawn of the consistency with which both go about their work. Beauty Beets has carried her work along at a merry clip throughout the year, breaking a world's record for milk production in the 60-day division, and the milk and fat production for 305 days. At the close of her year she flashes to the front again with world's records both milk and fat.

KING SEGIS PONTIAC COUNT, SIRE OF JEWEL PONTIAC SEGIS AND BEAUTY BEETS WALKER SEGIS

His daughters hold world's records in thirteen different classes. No other three bulls of the breed have daughters with an equal number of world's records. He is owned by J. M. Hackney, Minnesota.

Beauty Beets Walker Segis freshen next time as a junior f year-old so that her work cannot compared with that of Jewel w second lactation period was in senior three-year-old class. Bu will be of interest just the sam watch Beauty Beets Walker S when she freshens next April. J Pontiac Segis, on the other hand, possibly freshen as a senior f year-old as she will not be five y old until March, and is due at a the date of her birth.

Minnesota, home of the wo champion yearly producer of fa the aged class, is now the hom three Holsteins that have won ho for combined milk and fat produc in the yearly division. This i tribute to the state that has more than almost any other to p larize the long time test. The wor Mr. Hackney's herd and those of J. B. Irwin and E. C. Schroeder, whose herds these record holders been developed, stands out in som the most absorbing chapters in history of the development of the stein cow and to them is due share, with others, of the rew that shall follow the consistent a cation of the long time test to the stein breed.



If we consider for a brief spac reason why these two remark heifers have been able to accom such feats of production, we fin application of the principles of s breeding practice. For the sir these heifers, King Segis Po Count, inherits long time produc from both sides of his pedigree. dam was K. P. Lillith Clothilde, highest yearly record daughte King of the Pontiacs, and his s dam none other than Pontiac thilde DeKol 2d, former world's ord yearly producer and first co produce over 1,000 lbs. of fat in year. She was the cow that first passed the yearly record made b famous Wisconsin cow, Colantha' Johanna, it will be remembered. though the two nearest sires, tw the most famous of the breed, are ed for their short time produ among the lists of their daugh and although the second sire on dam's side, Pontiac Korndyke, is ilarly noted, it is of interest to that it is through the combinatio these sires' best yearly produ blood that King Segis Pontiac C has come.

The daughters of King Segis tiac Count are uniformly high ducers, showing a wonderful t mitting power for the bull. The formity in production is all the remarkable because of the fact practically all of his daughters, from good average cows, get thei heritance of production from the

uttermakers and Cheesemakers Wanted

Never before in the history of Wis-
sin has there been such a demand
trained buttermakers and cheese-
kers as now. Next spring the de-
nd will doubtless be greater than
as been this year. It is therefore
portant that everyone interested in
creameries and cheese factories
uld make an effort to send some-
to attend the winter dairy course
the University of Wisconsin at
dison which begins November 5th.

E. H. FARRINGTON,
Dairy Department,
University of Wisconsin.

Chicago Milk Prices

HOARD'S DAIRYMAN:—Milk pro-
ers in the Chicago district will re-
ve $3.68 per hundred pounds for
ir product during the month of
vember. This price is 36c higher
n the October rate and 76 cents
ve the September price. The ad-
ce in the milk price was in keep-
with the agreement reached last
mer when representatives of pro-
ers, distributors, condensers, and
cream makers met in conference
h food administration officials.
e other months, the price to be paid
s arrived at through the applica-
n of the modified Pearson formula
cost of producing 100 pounds
k. W. E. Lamb, attorney for the
ited States Food Administration,
sided at the hearing when the
ce was made.

Producers figured the new price a
r basis for the month as it was
ut in line with their calculations
l, as promised, shows a sharp ad-
vance over the mid-summer months when production is at the low spot. Although prices now paid for milk, to the producers, stand at a record, the December price is expected to be around the $4 mark.

With the advance allowed to the producers, an advance was authorized to the dealers. The retail price in the cities, effective November 1, will be 14 cents per quart and 8 cents per pint. These prices establish a new record for milk delivered in the city. The latest price rise was the third advance in three months.

Illinois. J. M. CARROLL.

Settlers clearing land in or near national forests should notify forest officials before proceeding to burn brush, and in all districts having a fire warden a permit from him should be obtained before any burning is attempted. In all cases ample precautions should be taken to prevent the spread of fire.

Two bushels of corn, a bushel of wheat—that isn't much on a farm, is it? Think of the joy the money would take to a soldiers' camp!

SUCRENE DAIRY FEED

66 Pounds Milk Making Nutrients In Every Sack

The 66 pounds of actual nutrition which you get in every sack of Sucrene Dairy Feed has greater milk-producing and body-maintaining value than any ordinary ration, at less cost, because it comes from a scientifically correct combination of seven different standard quality feeding materials. Its variety, palatability, easy digestibility completely satisfies the cow—no other concentrates needed to increase milk yield above average yield of cows.

18 Years the Dairyman's Favorite

Sucrene Dairy Feed was the pioneer in the movement to place dairying on a more profitable basis. Its adoption by the U. S. Government experts in charge of cows and other live stock used in connection with the Panama canal work was due to its superior nutritive efficiency and economy, as demonstrated by careful official feeding tests.

Wouldn't Do Without Sucrene Dairy Feed

"It has been so long since I did not feed Sucrene Dairy Feed to cattle on pasture that I can not say what the difference would be without it. My 155 registered Jerseys do so well on it that I would not want to do without Sucrene, either summer or winter."

JACOB E. WHITE,
Spring Grove Jersey Farm, Greenfield, Ohio

Made More Money Than Any Other Feed

"I can honestly say Sucrene Dairy Feed has made me more money than any feed I have ever bought, as it produces large quantities of milk at a low cost, to say nothing of keeping the stock in the best of health, with practically no sickness or calving troubles."

THOMAS Y. HACKETT,
Daretown, New Jersey.

Sucrene Dairy Feed is composed only of the following materials: Cottonseed Meal, Corn Distillers' Dried Grains, Germ Oil Meal, Finely Ground and Bolted Grain Screenings, Cocoanut Meal, Clipped Oat By-product (to provide necessary bulk), Pure Cane Molasses, and small percentages of calcium carbonate and salt (for necessary mineral matter.)

Its high guaranteed analysis of 16 1-2% Protein, 3 1-2% Fat, 46% Carbohydrates and 14% Fibre is always maintained

The great variety of high quality materials, combined with pure cane molasses, makes Sucrene Dairy Feed a complete and highly palatable milk making ration—relished by all cows.

GIVE YOUR COWS A CHANCE to prove that Sucrene Dairy Feed is a more profitable ration than you are now feeding. Order a ton from your dealer. If he can not supply you at once, write us.

To make sure of a supply for this winter, you should place your order at once, as war demands are likely to cause transportation delays.

Fill out and mail us the coupon or write a postal for further information and illustrated literature on care and feeding of live stock and poultry.

Solve the Labor Problem

Farm help is scarce. The use of those machines which effectively fill the vacancy made by the war will do much toward relieving this dangerous situation.

The Burrell Milker permits an operator to milk from 24 to 30 cows per hour. One man using two Burrell Milkers can obtain results equal to the endeavors of three men milking by hand. This is the same as saying that one man does three men's work, or that every man with two Burrell Milkers frees two men for other important work.

The manner in which the Burrell Milker draws the milk from the cow prevents any chance of injury to the cow or spoilage to the milk. The simple construction of the Burrell Milker and the ease with which it is kept clean make it desirable in the handling of certified milk. Considering the present high wages demanded by farm workers, the Burrell Milker pays for itself in a very short time.

EDITORIAL COMMENT

In 1913 a dairy cow had a beef value of only approximately 50% of her dairy value, while in 1918 it was 80 to 90 per cent. All of which indicates that beef values have increased more than dairy values, despite the fact that the cow is the more economical producer of human food.

For the first six months of their lives 50% of the children in America need cow's milk, and after six months and for several years all of them need it in order to grow properly and become strong, healthy adults.

COW HIDDEN FOUR YEARS

The British Daily Mail reports that when Lille was taken from the Germans and the allied troops entered the city they were received with much rejoicing. An incident of the re-occupation occurred that was at once humorous and pathetic. One family produced a cow that for four years they had kept hidden from the rapacious hands of the enemy and she was accorded sufficient recognition to be given space in the cabled reports. The Germans had been outwitted, but—just one cow left in a city that once boasted a population of 200,000.

CUTTING DOWN HAY

It is quite a chore to cut down a mow or stack of hay in the ordinary way, so Mr. L. G. McIntyre of Kansas invented a new method which has given him complete satisfaction as it is both simple and expeditious. He took 40 rods of barbed wire and with the aid of a small rope he pulled one end of the wire inside the barn from the bottom of the mow up over the top and down the other side, inside the barn through a pulley set about four feet above the ground. He then hitched a horse to this last end and led him in a straight line away from the barn. On the other end of the wire he fastened a small weight and a single tree. When he had walked the horse about thirty rods he unfastened him and hitched him to the other end. Each time he made a cut he lowered the pulley on the side from which he pulled. It took him forty minutes to cut down a mow that was 28 feet high and 30 feet wide.

CO-OPERATION AMONG CREAMERIES

We hear constant complaint from the co-operative creameries against the concentrators, the condenseries, and other lines that are taking their milk and cream. The managers of co-operative creameries have yet one great lesson to learn before they will be fit to meet the outside competition that they complain so much of. That lesson is: *Co-operation among themselves.* They don't seem to be able to work together when that kind of work is all important.

In many instances the old-time, foolish jealousy of each other prevails among them. Such men will try to steal a farmer's milk away from a neighboring creamery and are unwise enough to think that kind of a game is smart. Such a policy is death to all co-operative work for their own preservation and so we see creamery after creamery going out of business. Of course, added to this is the competition of other markets for milk and the lack of understanding of farmers as to the cash value of skimmilk. Such farmers are too ready to sell their skimmilk for half what it is worth as a feed for young stock and pigs. They do not yet understand their business. All they can see is extra price of the milk and away they go like children after it. But a broad spirit of co-operation among creameries will help greatly to counteract this false impression.

NATIONAL DAIRY SHOW

The best Dairy Show ever staged was held at Columbus, Ohio, beginning Thursday evening, October 10th, and ending Saturday night, October 19th. Why was it the best Dairy Show? Because its educational features, its exhibits, and its suggestions were better presented than ever before. The National Dairy Association was organized to stimulate, to encourage, and to guide our great dairy industry. Its purpose is to show how dairying should be conducted; to visualize its opportunities; to point out its pitfalls; to educate the consumer regarding the importance and food value of milk and its products; and to bring together the consumer and producer that greater enlightenment may prevail everywhere concerning the dairy industry.

The National Dairy Show offers a meeting place for those engaged in the various branches of dairying. It provides opportunities for comparisons of animals, machines, dairy products, ideas, and practices. The dairy industry, like all other large enterprises, is made up of units. At the Dairy Show are found the manufacturers of barn equipment, creamery appliances, milk bottling machinery, ice cream machinery, etc. The breeders of the various breeds of dairy cattle, the dairy farmers, the milk buyers and milk distributors, the creamery men and the cheese men, the feed manufacturers, the men of science, the inventors, and the advisors are all there mixing and remixing, vying and arguing, gesturing and exclaiming, criticising and praising that the dairy industry may be moved upward and forward.

The Dairy Show is held that those engaged in dairy farming may learn of better principles and practices. The breeder is benefited by seeing better animals than he has bred and by coming in contact with those engaged in similar undertakings. The dairy farmer finds many of his problems visualized and analyzed. The various methods of presenting information, though it be familiar, brings a new meaning and a new application.

A great national industry cannot grow symmetrically without a national stabilizing force. The National Dairy Association provides opportunity through the Dairy Show for exerting such a force. May its future shows bring forth still larger achievements.

COW TESTING ASSOCIATIONS

Not all members of cow testing associations are making use of the records kept of each one of their cows, and in this respect they fail to get out of the testing work all that they should.

There is little use in going to the expense of determining what each cow in the herd will produce, how much feed she consumes, the feed cost of 100 lbs. of milk and one pound of butterfat, unless the owner takes time to interpret these records so that he may understand what each cow is doing for him.

Mr. Noel Negley of the Dairy Division and Wisconsin Dairymen's Association, and one of the supervisors of Wisconsin cow testing associations, makes the following statements regarding the dairyman who fails to interpret the record of his herd:

"The fellow who bought a $30 suit and left it in the closet for the moths to eat did not know how to 'use' a suit. It's the same way with the dairyman who invests $30 a year in a cow testing association and never looks into his herd record or takes any special interest in the work.

"Of course, before a man can wear a suit he has to buy it, and before a dairyman can get any good out of a cow testing association he has to be a member, and almost every live dairyman who has the opportunity is a member or expects to join as soon as an association can be organized in his community.

"When a man puts $30 a year into an association he does it not to help anyone else, but to help himself. It is neither charity nor expense; it is an investment upon which he expects to get good returns. He is not getting something for nothing but simply joining with 25 other men so that the service he gets cost him less. And what he gets for his money depends very much upon each man and his tester."

"SPIRIT OF THE TRUE FARMER"

Dr. Henry Baird Favill of Chicago, whose untimely death in 1916 was so widely mourned throughout the nation, was one of the foremost breeders of Holstein cattle. Rev. E. G. Updike of Madison, Wis., wrote a beautiful tribute to his life and memory and now Dr. Updike has passed away to join the illustrious dead. In that tribute were these discerning words:

"He had a vocation and an avocation. His avocation had come to be a matter as absorbing as his profession. He had purchased what was originally his grandfather's farm at Lake Mills, Wis. He developed what was coming to be regarded as one of the most wonderful agricultural plants in the state. He had not been reared on the farm but he loved it. He had the spirit of the true farmer. He mast every detail and he knew the name and history every one of the one hundred and seventy- pure-bred cattle on his place. Nothing esca him. No experiment station did its work m carefully or scientifically than he. He told me out of his farm he was getting an intelle stimulus to that of his profession."

In those brief words there is a great les Every farmer owes it to himself and to the cess of his efforts that he cultivate in himself "spirit of the true farmer". Some are born on farm and love it, for they have the vision to what it means. Others are born on the farm hate it. Where hate leads, failure is sure to fol So many men look upon the farm in a sordid —only as a place to make money, a little pre gain. Their vision is narrow and small and t financial returns are the same. When will men that the farm unfolds itself only to those who it with the "true spirit of the farmer".

THE SECRET OF SUCCESSFUL DAIRYING

The Rural New Yorker divides dairy farmer to two classes, those who make a comfortable li hood from their cows and those who do not. note that the first class has but little to They have few if any complaints to make. have seen long ago that it was knowledge, knowledge, that makes the cow go. You will n if you go to their homes that they have prov themselves with the best of dairy reading.

One of these men wrote us not long ago gave his reason for taking a good dairy pa He said:

"I do this because it keeps my mind alive an tive for the problems of the business. My j ment is a good deal better for it. The cost small that I would be ashamed to cheat myself of it."

We notice another thing about these succe dairy farmers. They take constant pains to prove the quality of their cows. They succeed all kinds of breeds. Other men fail with all of breeds. But we never knew a man to fail kept pushing his herd to better and more profi performance. There are lots of half-hearted in all sorts of callings. Dairying has its sha them and sometimes we think it has more tha share.

MAKING STUDENTS OF FARME

Go into school and make note of the sch there. Some will be found who are willing to if it comes handy but are constantly bu against the idea of forcing their minds to do est, daily, hard work. If you investigate these ars you will find that real mental effort, ma earnest students of themselves, is distastef them. They are governed in their attitude tow mental culture by their tastes, their feelings not by the solid conclusions of their reason. students and a much less number are there fo purpose of down right hard study. They know they will never become masters of any lin knowledge without that close mental training.

It is just so in the making of a soldier in a our big camps. Not one man in ten would own self subject himself to the hard tra and effort as well as study necessary to ma good soldier if he were not compelled to by authority. Yet he knows that it is all fo best; that when he becomes a good soldier h be glad of all that made him so.

The making of a masterful, successful farm in the same line. There is no authority ove except the pricking of hard necessity that co him to unshackle his mind and make a stude himself concerning the how and why of wh does as a farmer. There is the great weakn the farming class. The majority trust to luc the learning of what they must know. As a quence they are never sure of themselves any problem that they are called on to face. among their number are resolute men, resolut their minds as well as their bodies. They c depended on to dig down to the root of every tion. It is these few that set the pace for all ing progress. These men do not hesitate to students of themselves. Go where you will in line of human effort, it is only the men who students of themselves who succeed best, an is especially true of farmers.

Let the College of Agriculture, for instance

ool for any special study like that of the study actors, for example. It is right there you will how much farther those advance who have ered their minds and can make ready students emselves. Slowly but surely is the insistent l of events forcing the farmer to be a student, ossess an active, comprehending mind. Of e, he needs a strong body and his daily work exercise give him that if he has good health. still more does he need a strong mind so he s right, sees right, and does right for himself those dependent upon him. This mental gth comes largely through his reading. How what he reads determines very greatly the of a man he is and the kind of a farmer he e.

TRUTH AND THINKING

l you ever stop to think that it was not al- the best balanced article or editorial which ght you the most good? The article which is ys well balanced may cause the nod of approv- at the one which produced thought and action not always temperate and moderate in all of tatements. The paper which is trying to pre- to its readers facts and truths must be guard- every turn. It must keep itself well informed atements of doubtful accuracy will find their into its columns. We take pride in being ac- e in statement; in presenting truth as we see nd in being right, for we know that in the end, ie final analysis, men everywhere and in all s of life believe in truth and right.

our attempt to be accurate in all things we are forced to modify statements which would enge attention and find ready acceptance with who have not thought to the final conclusion. ecognize that plain, cold facts are not always nost interesting reading, that imagination por- ng the ideal add life and zest to an article. But llow the imagination portraying ideals is dan- is unless curbed by the unusual faculty, com- sense.

w then can facts, figures, and truths be made esting and fascinating reading as well as val- ? In many cases it is impossible to give sober accurate statements the touch of imagination ssary to make them delightful reading and ght stimulating, unless the reader is a deep nt of his business and cares for nothing but . In our editorial writing we often make g statements for or against certain theories ractices and omit presenting all sides of the in order to stimulate thought. The chief func- for a paper is to furnish accurate information o lead its readers to think.

nk naught a trifle, though it small appear;

l trifles life."

Freeing Swine of Lice

e are putting in some hogs and would like to a few inquiries regarding the equipment.
nat is the best preventive for lice, and what rns handle it? Are rubbing posts or tanks for ng the best?
nat is the best worm remedy? Who handles it? what age are hogs able to feed from a self- r and what is the best make?
chigan. J. T. B.

e best preventive to use against lice for is to first see that no lice whatever are per- d on the premises either in the house or on ogs. Then when you buy new boars or other see that they are free from lice before you them in your herd or before you put them in arns to which your hogs may have access at later time. And then, in addition, it is neces- to watch your neighbors and see that your hogs do not rub noses with infected hogs on other side of the fence which divides your s from those of your neighbor.

l of this, of course, means eradication of lice your own premises providing you have them. best remedy we know of for this purpose is oil. Crude oil may be secured from a num- f different concerns in the various states. The an now be bought for about $8 to $11 per l of fifty gallons, it costing on this basis t 16c to 21 or 22c per gallon.

nen we treat our hogs here we simply put all in one corner and spray them thoroughly crude oil, which has previously been placed in rdinary spraying can. If the holes are not big enough they can easily be made larger by of some sharp instrument. After you have ved these hogs thoroughly, take a broom and them all over with it. Another scheme is to spray pump. A dipping tank may be used to advantage, although ordinarily it is not used on the swine farm.

Rubbing posts can be used and they help some but they will not completely eradicate the lice. However, a good rubbing post is of much value in keeping lice down to reasonable numbers.

Some practice also spraying the inside of the hog house, particularly in the summer time.

A good hog remedy, very successful for round worms, consists of a mixture of santonin and calomel. The dosages are arbitrary but, generally speaking, a fifty-pound pig can handle from three to five grains of santonin along with an equal amount of calomel, a 100-pound pig should have six to eight grains, and over this ten grains should be given. Mix same thoroughly and give with a little feed. Some recommend that this be given after the hogs have been kept off feed 24 hours, some after 12 hours. We have practised giving it with the regular feeds with fair success. This worm remedy can be bought through most any drug store and is highly effective.

Another remedy for round worms is oil of chenopodium. The dosage of this as ordinarily recommended is from 30 to 50 drops, along with castor oil, say from half an ounce to an ounce or even upwards of an ounce and a half with large hogs.

Hogs may be fed from the self-feeder right from birth and the home-made kind is probably the best. Hoard's Dairyman has heretofore published self-feeder cross sections. There are a large number of self-feeders on the market. I would advise you to get in touch with the firms making self-feeders and use your own judgment as to the ones to buy. Home-made ones, however, are very good if properly made.

Iowa. JOHN M. EVVARD.

Cows Prove Alfalfa Superior to Bran

A feeding trial recently completed with cows in Nebraska gives added proof of the high value of alfalfa. Claims have frequently been made that the legume is equal to bran in the dairy cow's ration. The experimental work at the Nebraska Station not only makes good these claims—it even shows alfalfa superior to the wheat by-product, now so eagerly sought and so difficult to procure. If the data gathered may be generally applied, it means a goodly saving to many dairy farmers. According to the Nebraska statistics, a ton of alfalfa ground or finely chopped will replace a ton of bran in the concrete mixture successfully and, in most sections of the country, at a considerable saving.

The subject matter of a bulletin issued by the Nebraska Experiment Station on the feeding tests completed is here presented:

The problem of reducing the cost of the ration for the dairy cow is of much importance. Where roughage may be substituted for a grain or by-product concentrate, the cost of the ration is likely to be decreased. Throughout a large part of the western half of the United States alfalfa hay is abundant and comparatively cheap when calculated on its protein or energy units. In the form of alfalfa meal it may be shipped into a large part of the country east of the Mississippi river at a cost much less per ton than the cost of a mill product of like feeding value.

The North Platte Substation of the University of Nebraska has conducted an experiment to determine whether chopped alfalfa may be substituted for wheat bran in the dairy cow grain ration of 4 parts corn, 2 parts bran, and 1 part oil meal, and the effect of such substitution on the performance of the cows. The first test extended from December 1, 1916, to January 30, 1917. During this time the cows were fed about 30 pounds silage per head daily and had access to a rack containing alfalfa hay. The second test was begun March 1, 1917, and closed May 30, 1917. The cows were fed silage and alfalfa hay throughout the test and had some grass during the last few weeks. The amount of grain was based on the milk flow—one pound of grain for 3 to 4 pounds of milk.

Six pairs of cows were selected for each test. Each pair was matched as closely as possible in respect to breed, lactation period, previous record, milk flow, percentage of fat, and other factors that would be expected to affect production. One cow from each pair was put into Group A, the other cow into Group B. The six cows of Group A were fed a grain ration consisting of 4 parts ground corn, 2 parts bran, and 1 part oil meal during the first period of 15 days, while the six cows of Group B were fed a grain ration consisting of 4 parts ground corn, 2 parts chopped alfalfa, and 1 part oil meal. During the second 15-day period the A group received the alfalfa ration while the B group received the bran ration. The test was extended through four 15-day periods during two periods of which the cows of Group A were fed the bran ration and two periods the alfalfa ration. The cows of Group B were fed in a similar manner, only that when the cows of Group A were getting the alfalfa ration those of Group B were getting the bran ration, and when the cows of Group A were being fed the bran ration those of Group B were being fed the alfalfa ration.

During the third period of the first test one cow in Group A, being fed the bran mixture, went off feed for a few days and during the fourth period another cow in group A, being fed the alfalfa mixture, dropped in production for a few days. As one cow was off when on bran and the other when on alfalfa, these deficiencies do not influence the final results.

During the second test one cow became sick. She and her mate were taken out of the test, leaving only 5 pairs of cows.

Results of the First Test

The six cows in Group A while on the bran mixture during two 15-day periods gave 3,972 pounds of milk containing 144.3 pounds of butterfat, and lost 32 pounds in weight. The same six cows while on the alfalfa mixture during two 15-day periods gave 3,952 pounds of milk containing 138.7 pounds of butterfat, and gained 233 pounds in weight.

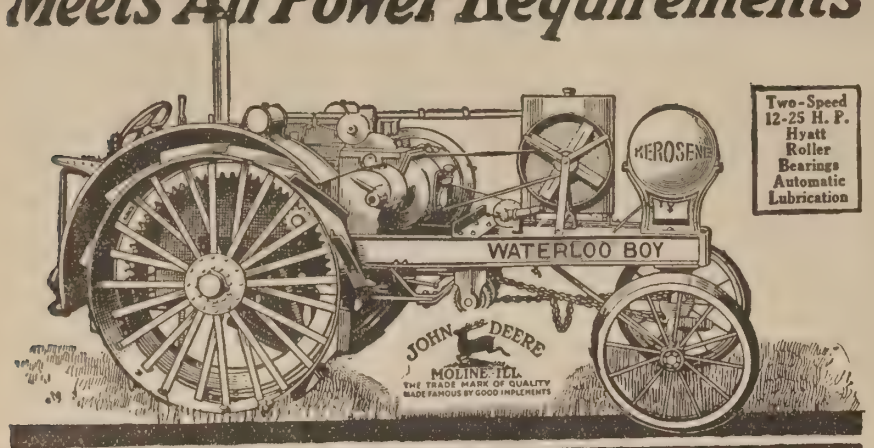
The six cows of Group B while on the bran mixture during two 15-day periods gave 4,244 pounds of milk containing 158.4 pounds of butterfat, and gained 128 pounds in weight. This same group of cows while on the alfalfa mixture during two 15-day periods gave 4,332 pounds of milk containing 163.6 pounds of butterfat and gained 1 pound in weight.

Bringing together the results from both groups we find that the twelve cows while eating the bran mixture during two 15-day periods produced 8,216 pounds of milk containing 303 pounds of butterfat and gained 96 pounds in weight. The same twelve cows while on the alfalfa mixture during similar periods produced 8,284 pounds of milk containing 302.3 pounds of butterfat and gained 224 pounds in weight.

Results of Second Test

The five cows in Group A while on the ration of corn, bran, and oil meal during three 15-day periods gave 7,430 pounds of milk containing 250 pounds of butterfat and lost 3 pounds in weight. The same five cows while on the ration of corn, alfalfa, and oil meal during three 15-day periods gave 7,147 pounds of milk containing 245 pounds of butterfat and lost 52 pounds in weight.

The five cows of Group B, while on the ration of corn, bran, and oil meal during three 15-day periods gave 7,239 pounds of milk containing 241 pounds of butterfat and lost 125 pounds in weight. The same five cows while on a ration of corn, alfalfa, and oil meal during three 15-day periods gave 7,309 pounds of milk containing 239 pounds of butterfat and gained 68 pounds in weight.



Combining the results from the two groups we find that the ten cows while being fed bran with corn and oil meal during three 15-day periods gave 14,669 pounds of milk containing 491 pounds of butterfat and lost 128 pounds in weight. The same ten cows while being fed alfalfa with corn and oil meal during three 15-day periods gave 14,456 pounds of milk containing 484 pounds of butterfat and gained 16 pounds in weight.

Two Tests Combined

Twenty-two cows while being fed a forage ration of silage and alfalfa hay, and a grain ration of 4 parts ground corn, 2 parts bran, and 1 part oil meal during an average period of 75 days, gave 22,886 pounds of milk containing 794 pounds of butterfat and lost 32 pounds in weight. The same cows during a similar period and under similar conditions, and fed the same ration excepting that chopped alfalfa replaced bran in the grain ration, gave 22,741 pounds of milk containing 786 pounds of butterfat and gained 240 pounds in weight.

During these tests with twelve cows for two months and ten cows for three months, chopped alfalfa was substituted for bran in the standard dairy grain ration of 4 parts ground corn, 2 parts bran, and 1 part oil meal without any appreciable unfavorable effect. The slight decrease of 145 pounds in milk and 7.5 pounds in butterfat production while the alfalfa was being eaten was more than overcome by the gain of 272 pounds in the weight of the cows. It is evident that in these tests alfalfa was fully equal to bran. If these results are the same as are found in general practice, then alfalfa fed in this manner has the same feeding value as bran.

Meets All Power Requirements

Two-Speed 12-25 H. P. Hyatt Roller Bearings Automatic Lubrication

WATERLOO BOY
ORIGINAL KEROSENE TRACTOR

Experience has demonstrated that this three-plow tractor, with 25 H.P. at belt is the ideal "general utility" tractor for any size farm. Its light weight, simplicity, great durability, ample power and economy give it

The Widest Range of Availability At Minimum Operating Cost

Discriminating buyers are choosing the Waterloo Boy because of its demonstrated success in the hands of users under all conditions; because it is built and fully guaranteed by a responsible manufacturer; because of its dependability in emergencies, unusual fuel economy, and because conveniently located distributors insure prompt and courteous service when needed.

Write for free illustrated catalog giving full information.

Geo. W. Brending, Milford, Ill., writes: "Your tractor has given complete satisfaction. I plowed seventy acres in eight days with a three-bottom John Deere Plow; did most of my discing with it using two 18 in. wheel discs at all times. Kept close record of operating cost—$2 per day paid for all fuel and lubricating oil when doing a full day's work."

Chas. W. Carlson, Stromburg, Neb., writes: "Your tractor is O. K. It is cheap to operate—not more than two gallons kerosene to the acre, plowing good depth, with 3-bottom 14 in. John Deere Plow. Plowed old alfalfa, sod pasture, stock and stubble ground without trouble. I use the tractor to pull 28 in. thresher and thresh 33 loads of wheat to a barrel of kerosene."

JOHN DEERE, 4103 W. Third Ave., Moline, Ill.

CHASE
PLUSH MOTOR AND CARRIAGE ROBES
Made by Sanford Mills

They will outwear many times over other woven fabric robes — always ask for "Chase Robes."

Beautiful, Durable, Warm

Chase Plush Robes have been famous since 1867—made from the choicest of animal hair, they are so woven that wear comes on *top ends* of fibres, affording long service — no wearing out in spots — weather and cold proof — sanitary and of wondrous beauty.

Chase Plush Robes were the choice of our grandparents, and are a nationally advertised and trademarked product.
Scores of patterns, various weights, sizes and prices.

Milk Show of the Twelfth National Dairy Show

The milk and cream exhibit at Columbus was the largest of its kind ever assembled at a National Dairy Show—there being one hundred and fifty-six entries in the seven milk and cream classes. In addition to this number, there were four other shipments which were sent but failed to arrive.

All dairy sections of the North American continent were represented—there being entries from twenty different states and Canada. Especial interest was taken in this contest by milk producers and officials in the states of Pennsylvania, North Carolina, Ohio, New Jersey, and Massachusetts—the other states each being represented by a few splendid entries.

J. A. Gamble, Professor of Dairy Husbandry Maryland State College of Agriculture, formerly Market Milk Specialist U. S. Dairy Division, and H. E. Ross, Professor of Market Milk New York State College of Agriculture, were the milk and cream judges.

STASIS BOY OF SEDGELEY, SENIOR AND GRAND CHAMPION BROWN SWISS BULL AT THE 1917 AND 1918 NATIONAL DAIRY SHOWS
OWNED BY L. S. MARSHALL & SONS, MICHIGAN

Gousseff to Grand Rapids

W. V. Gousseff, for two years a ricultural agent for Steel Count Minnesota, has accepted the positi of Animal Husbandman at the su station of the Minnesota Experime Station at Grand Rapids.

Mr. Gousseff has been very su cessful as a county agent. Throu his efforts Steel County farmers ha become strongly organized. Of pa ticular importance are the shippi associations through which ma farmers are selling their stock co-o eratively. The pure-bred industry the county has prospered especial through his assistance. His efforts advertising Steel County Holstei have given the breeders much va able publicity. His successor will Mr. Julius Ausen, formerly organiz and supervisor of cow testing associ tions for Northern Wisconsin, which work he has been remarkab successful.

In his new work Mr. Gousseff w have charge of animal husbandry e tension work in a group of counti around Grand Rapids.

One little pig—just one—will s for enough to provide comforts a enjoyment for three soldiers for qu a while. Can't you spare one pig?

What An Expert Says About High Protein Feeds

Algoma, Wis., March 4, 1918.

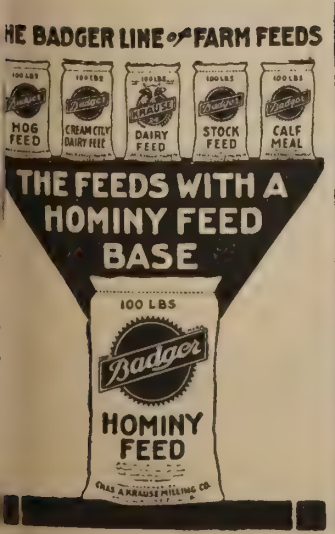
Chas. A. Krause Milling Co.,
Milwaukee, Wis.

My Dear Sirs:

I believe that the feeds that have the greatest power to stimulate milk production have the least power in nourishing the reproductive organs.

I admit that high protein feeds stimulate milk production. It is true that cows making large records were fed rations containing a large amount of protein, but witness also the large number of such cows that are barren or entirely sterile as a result of such feeding.

I know herds right here, that have been fed largely upon high protein feeds, as recommended in conjunction with leguminous hays (high protein), that are now ruined by abortion. The fact that the cows carried their calves up to six to nine months is a pretty good indication that it is not germ abortion. It cannot be traced to any other source than improper feeding.



High protein feeds have their place in the economy of feeding, but one thing must be remembered: **They must be fed with other feeds** that counteract their bad effects. Such feeds are corn, hominy, barley, etc., hominy being the cheapest at present.

In carrying out this plan, alfalfa or clover hay, with plenty of good corn silage for roughage, and oats, corn, barley, bran and some one high protein feed, play an important part.

We should not let our thoughts run altogether to the milk pail. We should so feed and care for our cows that their vigor, health and reproductive powers are maintained.

Most sincerely yours,

(Signed) FRED PFUEHLER,
Official Tester of the Wolf River Cow Testing Association.

Why Cows Need a Balanced Ration

THE heavy milk cow of today may be compared to a machine. An experienced and careful operator can drive a machine at high speed day after day with only normal wear and tear. In the hands of an inexperienced operator, however, it is soon pounded to pieces, its working period is reduced, and while heavy production may be maintained for a time, the average is low.

Likewise, by the use of a high protein, but poorly balanced ration, a cow may be forced to show big results for a short time, but at the expense of her other functions. Feeders now realize that a cow's ration must be properly balanced by sufficient fats and carbohydrates.

A properly balanced ration which, while containing sufficient protein, furnishes in addition other necessary food elements, will produce a heavy flow of milk without in any way impairing the cow's general condition.

Three of the most widely used dairy feeds, BADGER STOCK FEED, CREAM CITY DAIRY FEED and KRAUSE DAIRY FEED, differ in protein content, so that the dairyman can select the one which is exactly suited to his requirements and will give him the results he desires.

The base of all of these feeds is BADGER HOMINY FEED, a rich, nutritious, palatable feed, high in digestibility, which stands at the head of every grain and feed stuff available to the American feeder. Fed alone, however, it is too compact and is not properly balanced. In these three feeds it is so combined with other elements as to form a perfectly balanced ration, which insures heavy milk production and, instead of lessening reproductive power, increases it.

BADGER STOCK FEED is designed to meet the need where a comparatively low protein and high carbohydrate feed is desired.

CREAM CITY DAIRY FEED has a good percentage of carbohydrates and fat, which keep the cow in good condition, with just the right amount of protein to produce a good flow of milk.

KRAUSE DAIRY FEED runs higher in protein, to meet the necessity for heavy milk production and for use where feeders wish to use home grown grains in the ration.

You can use no better feeds than these perfectly balanced rations, made up by a manufacturer of high standing and long experience. No feeds you can mix yourself can be as scientifically accurate, as economical, as thoroughly dependable.

Ask your dealer for the feed best suited to your requirements; write for free samples and full information.

We will consign 10 bulls from
Edgemoor Farms, Santee, Cal.

Combination Sale

At Waukesha, Wis.

Wed., Nov. 6th, '18

Included in the lot is the bull, Langwater El Dorado 39316, born Aug. 17th, 1915. He is by Langwater Holliston, a bull now in use in the Upland Farms herd, Ipswich, Mass. His dam is a daughter of Langwater Hope, 1,003.7 lbs. fat. This bull has been largely used in the Edgemoor Farm herd. There will be four of his sons in the sale that will show the high class of cattle he is siring. One of these traces 17 times to May Rose 2nd.

Included in the lot is Superb of Edgemoor 49590, born Dec. 15th, 1917, sired by Itchen May King 25174 and out of Donnington Goldie 5th 59866, 796.52 lbs. fat in Class E, and first prize 4-year-old cow and first prize Jr. A. R. cow at the National Dairy Show 1917. This calf is well enough bred and good enough individual to head any herd in America.

Itchen May King now has 4 A. R. daughters with records up to 617.04 in Class F and many more under test. Three of his sons that we consigned to the Waukesha Sale last spring sold for an average of over $1,000 each, and two of these won 1st prizes at Wisconsin State Fair this year.

Three calves in the lot are sired by Royal Rose King, a son of Itchen May King and Beladdia, 934.05 lbs. fat.

The dams of nine of the bulls are either in the A. R. or are now under test. This will be your opportunity to get a new head for your herd. Send to F. E. Fox, Waukesha, Wis., for catalog of the sale.

New York Butter Market

NEW YORK CITY, October 22:—There has been a decline of three cents in price of all grades of butter since one week ago. The bottom for the present, at least, seemed to have been reached on Monday when extras were quoted at 57c. However, predictions are of no avail in these times when retailers, jobbers, and wholesalers are keyed up to the highest nervous condition possible. We may expect extreme fluctuations in prices during the next six months. During the past week consumption of butter has been at the minimum. It is very probable that high prices are largely responsible for that condition but the fact that Greater New York contains hundreds of thousands of people sick with the prevailing epidemic, Spanish influenza, leads one to suspect that that factor has some bearing on the situation. Retail merchants have their stocks practically depleted at present and it is expected that there will be greater activity in the market within the next two or three days.

There has been a great accumulation of butter, especially of lower grades, during the past week. The report of the Bureau of Markets shows that there are on hand about 70,000 packages of fresh stock. Much of that stock came in on higher quotations and handlers are loth to dispose of it until the previous market level has been reached. Today there seems to be a slight feeling of greater strength. All lots of extras offered on the exchange at 57c were quickly taken up. More would have been disposed of had it been offered. Very little under grade butter is moving at present but without doubt when the break comes great quantities will move quickly.

Following are quotations on extras during the past week: Wednesday, 60c; Thursday, 58c; Friday, 58c; Saturday, 57½c; Monday, 57c; and Tuesday (today), 57c. Quotations on other grades today are: Higher scoring than extras (93 score or above), 57½@58c; firsts (88 to 91 score), 55@56½c; and seconds (83 to 87 score), 52½@54½c. Unsalted butter is moving very slowly. No sales are being made except in regular channels. However, the quotation is at the usual differential over corresponding grades of salted butter.

W. B. LIVERANCE.

The dairy cow requires an ounce of salt a day, and while she should be given all she needs, she should not be forced to take more than she wants. It is best, therefore, to give only a small quantity on the feed, and to place rock salt in boxes in the yard.

Come and by your presence show your interest in this great breed of cattle.

Walworth County Holstein Sale

ELKHORN, WISCONSIN

Thursday, November 7th, 1918

(At the new stock judging pavilion on the fair grounds.)

75 Head of Registered Holsteins

A daughter of King Walker Pietertje Segis and bred to Sir Hengerveld Korndyke Ormsby, a son of the famous Pietertje Maid Ormsby and half brother to the great Sir Pietertje Ormsby Mercedes. Here is a sample of the breeding and individuality of the animals to be sold in this sale.

Young Bulls of Serviceable Age

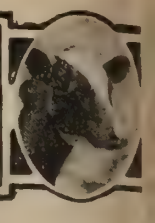
An unusually large number of young bulls of serviceable age will be listed with the many other attractions which can only be briefly mentioned.

Few of the Remarkable Service Sires

The following list is a few of the prominent herd sires to which cows and heifers have been bred that are consigned to the sale: Sir Hengerveld Korndyke Ormsby, son of Pietertje Maid Ormsby and brother to Sir Pietertje Ormsby Mercedes; King Pontiac of Brothertown whose two nearest dams average 38.53 lbs. and whose dam is a twice 32-lb. cow; Sir Johanna Pontiac Segis a grandson of King of the Pontiacs and out of a 28.60-lb. granddaughter of King Segis; a son of Sir Pietertje Ormsby Mercedes 22d whose three nearest dams average over 1,000 lbs. butter; son of the well known Sir Ormsby Johanna DeKol; and Admiral Walker Prilly Sir Johanna, a 25.14-lb. grandson of Admiral Walker Prilly and Sir Johanna Bonheur.

Some of the Special Attractions

A large, straight, well grown daughter of King Segis Pontiac bred to Sir Hengerveld Korndyke Ormsby. An A. R. O. show cow sired by a full brother to the sire of Dutchess Skylark Ormsby and bred to King Pontiac of Brothertown. Son of Wisconsin's great show bull, Iowana Sir Ollie, who is out of the famous old cow, Ollie Watson Prima Donna. Kayewood Dora Johanna, a fine, large, consistent producing A. R. O. cow, also bred to King Pontiac of Brothertown. A good number of fine (milky) cows bred to Sir Johanna Pontiac Segis. Promising young cow coming in with second calf—daughter of Beauty Walker Pietertje King. Some choice granddaughters of King Pieter. Daughter of Beauty Walker Pietertje King and Vivie Belle of Elkhorn, now on semi-official test and about to finish at better than 700 lbs. butter; also some choice females bred to Sir Ormsby Johanna DeKol 37th and Ormsby Bess Kaan DeKol.



A. W. P. Pearl Perfection 2nd (351601)

Breeding and *Individuality* of the animals consigned cannot be surpassed. This is strictly a breeders' sale. All animals 6 mos. or older tuberculin tested. Catalogs ready Oct. 28.

JOHN G. VOSS, Sale Manager, Elkhorn, Wis.

HOARD'S DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

Observe Closely

"Gosh, Jimmie, how does he do it? S' far as I can see, they all look alike." Two boys at a recent county fair were watching John Savage, a neighboring breeder of dairy cattle who had been chosen to act as judge, as he lined up a class of heifer calves, carefully selecting the winners and placing them in order. "There, he's finished, let's ask him. Maybe he'd tell us about judging."

"You go ahead, Bill. He knows your dad. Probably, he won't tell us nothing anyhow."

And "go ahead" they did. Like most judges at fairs, the breeder was pleased to answer their questions. He walked along the line of calves, stopping by each to speak of its good or bad points.

"See this calf here? What do you think of her?"

"Well, Mr. Savage," replied Bill after looking at the calf in question so long that Jimmie was about ready to speak up himself, "I can't see why she ain't as good as that there one you put first. She's bigger an' she's fatter."

"Perhaps she is, but size alone isn't enough to put an animal up. What do you think of her?" he said to Jimmie.

"She's longer and she's higher up but she ain't so big middled. Spot's our best cow at home and she is deepest and widest. Pa says he don't like cows to have too much daylight under 'em."

"That's right, young man," the judge returned, "and that's a big advantage in this heifer we've placed first. She has capacity. That's important. When she matures, she'll be like your "Spot". She will have room for a lot of feed and will produce more than a shallow bodied cow. Put your hands on this first heifer. That hide is soft and pliable. It is of good quality and indicates strong, vigorous blood flow. Good cows when in milking condition have that kind of a hide, and heifers with it give promise of developing to high quality animals. Now, feel this other one. Pretty thick, isn't it? Hard, too, and the hair feels harsh. You would hardly expect that in a healthy, growthy heifer that has had the good care this calf must have had in order to get her into this flesh."

Bill, standing beside the calf he favored, stooped to look at the udder development. He then went to the other and back again, examining the two in this particular carefully. "I think I've found another reason why you placed this heifer down, Mr. Savage," he said. "She hasn't as big a bag and her tits are pretty near all growing out of one place. She's liable to grow up an' have a bag like my father calls 'bottle-shaped.'"

"There again it isn't size altogether that you want to look out for," Mr. Savage said and, as the winning heifer backed up, "notice the spread there. The loose skin indicates that the udder will be well developed in the rear attachment. I want you to reach down and feel the fore udder with the loose skin extending forward on the belly."

Both boys did, Jimmie a bit gingerly to be sure, for a black and blue spot a calf had given him a few days before had taught him to respect the heels of calves. "Gee," he said, "she has nearly as much bag now as one of our cows that the hired man tried to get pa to sell the other day 'cause he said she wasn't worth keepin'. I think this'n is better'n that other heifer."

Mr. Savage turned to Jimmie, "Are you agreed, too? If you are, I must go on to the next class. But first I want to give you a lecture on judging live stock. It isn't long—just two words. You picked the wrong animal in this class because you failed to see the calves. You made up your minds before you had really seen them. In judging, get a clear cut picture of each individual animal. You can become efficient judges by following this rule from this time on—"Observe closely. Never slur over an animal —study it."

Mr. Savage hurried away before the boys even had an opportunity to thank him for his kindness. As the calves were being led back to the barn, Bill and Jimmie stood gazing after them. "That was a pretty short lecture, Jim, wasn't it? Wish he'd told us more." And, when Jimmie failed to reply, "But there's a lot in that advice—'Observe closely'. Gee, we never did see them calves until we 'observed' more 'closely' than we did when they all looked alike. I'm goin' t' begin right today to be a judge."

"I wonder if we ever could be judges. I'd like to" was Jimmie's rejoiner. "Wouldn't it be fun to tell other kids how some day? Maybe if we keep at it we'll know as much about it as Mr. Savage."

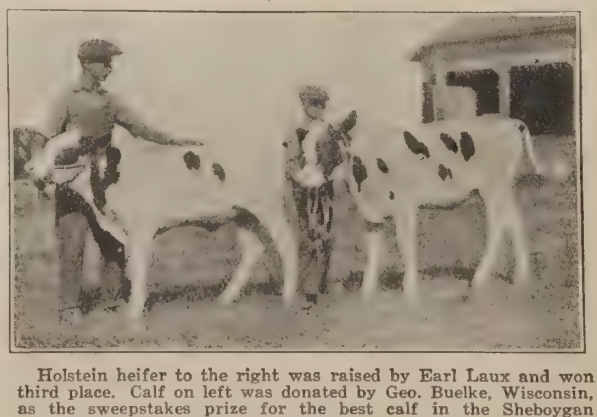
SHEBOYGAN COUNTY, WIS., CALF RAISING CONTEST, 1918
In this class of pure-bred heifer calves there were 15 contestants. In all, 31 calves, raised by boys and girls in this county, were at the fair. They took away about $235 prize money.

Wood County Cattle Auction

HOARD'S DAIRYMAN JUNIORS:—In March of this year the Wood County Improvement Association in co-operation with the Wood County Jersey Cattle Club brought into this county 27 Jerseys and 26 Holsteins, all heifers. These were sold at the time to the boys who wanted them and distributed mostly by drawing when the heifers came. The boys paid cost prices for them. Of course the fathers of the boys backed the association and club so that there was no chance of a loss anywhere.

All summer the boys cared for the heifers and did everything possible to develop them and get them into condition for showing at the Wood County Fair in the fall. On Friday of the fair the auction was held which was the climax of the months of preparation and it is of this which I am going to tell.

County agents from many other places came in and brought delegations of interested farmers and club members to see the auction and get the plan for such a sale in their own county.



The Jerseys sold first. The auctioneer was Col. Perry of Ohio, well known to stockmen of this and most other states. Col. Perry alone is a drawing card. Personally I have heard of him for years but never happened to be at a sale that he cried. I think it was worth anyone's time just to hear him whether they even looked at the heifers or not.

The average selling price of the Jerseys was $251.00. The lowest bid was $145 and the highest was $495, which is something quite out of the ordinary in this county. The average cost price was $170, which shows a little balance of $81 per head on the average for the boys who wanted to let them go. Most of the Jerseys stayed in the county though the highest priced one went to Michigan.

With the Holsteins the prices ranged from $175 to $610 with an average of $306 for the 26 heifers. Some of these stayed in the county and some were bid in by the boys who took care of them all summer.

The boys had a right to bid these cattle in and settle at the price they paid if they wished. I am unable to tell just how many were kept by the boys but not all of them. But for the boys who sold they had the profit for their bother which in some cases paid them pretty well. One neighbor boy of 10 had $120 in his pocket for the few months that he cared for his heifer. This is just one that I happen to know more about than any of the others.

Ohio. EARL ROGERS.

Holstein heifer to the right was raised by Earl Laux and won third place. Calf on left was donated by Geo. Buelke, Wisconsin, as the sweepstakes prize for the best calf in the Sheboygan County Calf Raising Contest. He was won by Victor Jacobs who sold him for $100.

VICTOR JACOBS
A 16-year-old high school boy from Sheboygan whom the county agent placed on the Holstein farm of R. B. Melvin & Son, Wisconsin. Victor got busy and raised the calf he is holding so well that he won first prize of $8 and sweepstakes at the county fair in the Sheboygan County Calf Raising Contest.

Out of 91 boys who made exhibi at the 1917 Kankakee Inter-Sta Fair in Illinois, 89 are now in th army or navy. This shows how stron ly the call to service has been felt c the farms of America. Also, it ind cates the large part which the farme of the country are doing. Not on are they depended upon to feed th people of the United States and mi lions in the nations of our allies b their boys are doing their full sha of the actual fighting.

Junior Letters

Hoard's Dairyman Juniors:—I thought would be about time I should write again.

We now have eight small calves, which a growing fine. We keep them in the barn wi good bedding, and oats, hay, and sweet clov to eat.

Our school will be opened Sept. 9th. I a 11 years old and will be in the 9th grade.

I have a brother in the Medical Corps Ames, Iowa.

I am now keeping a record of all the m I get. We are milking 29 cows.

I wish some of the juniors would write to n My address is Stuart, Nebr.

Lyman Jillson.

Hoard's Dairyman Juniors:—Well, I w write tonight; it is raining now and has be raining most all day. I started to plow but t rain made me stop. I wrote a couple of l ters last year but I have not seen them yet.

I have been busy this year so far; I ha worked 1½ months for one man. I helped a while and then I worked out 7 weeks, th I have been helping pa since. I have be plowing the last week. Some places it was little hard. I think it will plow better no

We have moved to Nashville now; was at all last winter and some of the spring. I h the chores to do last winter. Pa bought greenhouse last spring. He stayed down to and I had the chores and other things to Well, I looked after them pretty well for t time I was up there. I would have to co to town and get home late and do chores the way from half past seven to half pa twelve at night. But, say, I liked it just t same. We rented our farm but he is not very good renter. Pa wants me to stay the farm this winter and farm it next su mer and I think I will. I would like it bett if it were my farm and running it on my ow account. I have been wanting to get in t navy but I guess I won't just right away. pa did not want me I would have been in long while ago if they would take me.

The Barry County Fair is this week. I thi I will not go.

Say, do you know I have missed your pa a whole lot. If I can get a dollar I am goi to send for the paper. Pa thought becau we moved to town that we did not want

I have a pile about 2 feet high saved up b I don't know if I will use them or not but will save them a while longer. Maybe I w have to go to France. I will have to regist Sept. 12.

Well I will stop for tonight. I am getti mixed up.

Well, I will try and finish now. It is Su day, Sept. 8. Saturday, Sept. 7, I took a lo of household goods to Hastings for a man w started from Nashville. It rained a little abo 10 minutes before I got there. It was abo 13 or 14 miles to Hastings. Everything we

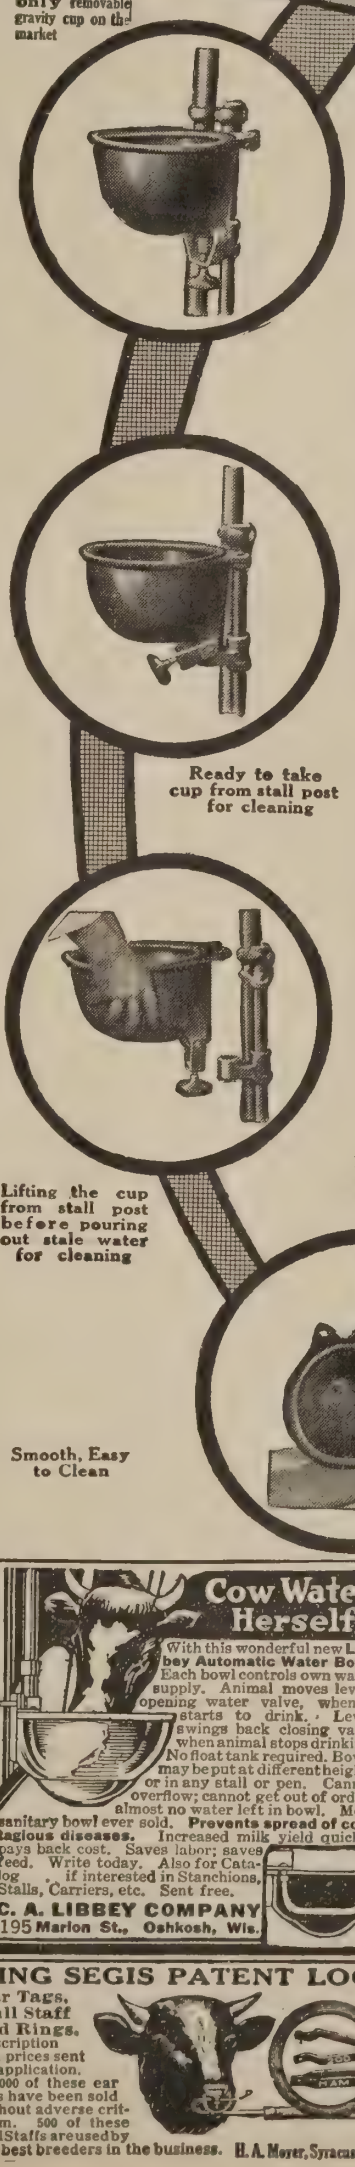
ell; it was eleven o'clock when I got home. This is a very nice day, it is still and the sun shining and not very warm. I think we will resh some time next week.
Michigan. Carter H. Brumm.

Hoard's Dairyman Juniors:—I have just had y supper and feel fine.
In your last letter you asked me if I had ıy chickens. I haven't but my brother has 40. ney are not full blood Leghorns; they are a ixed kind. I wanted to buy a pair of Belan hares but I don't know where to get any. ave any of the juniors got any for sale? c have 7 pigeons. Two have two eggs. They e hatching them now.
We have a player piano.
I would like to have some one to write to me anyone has any rabbits. My address is semont, Minn.
Johanna Witdenbogerd.

Hoard's Dairyman Juniors:—It has been a ng time since I wrote to you for I have been ry busy helping in the harvest. We have reshed and we threshed out 310 bushels of ts and 355 bushels of wheat. We have plowed me and got some harrowed but nothing wed yet. It has been raining down here. e are going to fill silo tomorrow. We have me corn cut for the silo but none cut in ocks yet. Some of our corn almost burnt up that hot weather. We are milking 11 cows w. We have five little heifer calves.
Our herdsman is now in Camp Dodge, Iowa. Our school starts the 16th of this month. ıe township in which I live had a picnic and ction sale at which they cleared over $1,000 ıich they gave to the Red Cross.
Well, as it is bedtime I will close, so goodbye niors for this time.
Illinois. Ralph E. Koch.

Hoard's Dairyman Juniors:—I am keeping lk records, tending to the goats, feeding the gs, and separating. I have been plowing papa. The goats are doing fine. Papa s been at court but is back now. This is my rth letter to the juniors. I read the juniors' ge every week.
You ask me how I earned my colt. I joined Richmond Calf Club. We were to bring the lves back a year from the day that we got m. Then they were sold. If there was any re than the calf cost we got it. I give $30 mine and sold it for $60. Then I bought Jersey calf and sold it and joined the club d got another calf. I got the best calf. ıen I joined the club then I gave the calf papa for the colt. The calves came from sconsin.
We have several kinds of apples. I will me some of them. Transparents, Red Zone, riped Zone, Mathers, crabs, early Harvest. kins, Maiden bush, Rainbows, Jonathan, 3 ıds of sweet apples, Grimes Golden, horse pie, Willer twig, Ben Davis, Rusty Coat, d Winesap. The trees came from Stark os. I will close, wishing the juniors good k.
Missouri. Earl Hillhouse.

Hoard's Dairyman Juniors:—I received the ed, button, and fob and thank you very ch for them.
The Chetek State Bank Pig Club was orıized so the children in the country could se pork for their country. My pig weighs ut 60 lbs. His name is VonHindenburg. I d my pig shorts, potatoes, and water and ver pasture. B. M. Apker got a lot of s from the Rusk farm and distributed them ong children that promised to pay for them s fall.
will close with good luck to the juniors.
Wisconsin. Edwin Hanson.



Hoard's Dairyman Juniors:—This is my ond letter to the juniors. I live on a farm seventy-eight acres, three miles from Wot. Daddy has been helping some of the ghbors fill silos. We have one silo. It is id concrete, 12x29 ft. All the space in it above the ground. We have eighteen head Jersey cows and one registered Jersey bull. e had almost enough corn for another silo e we have now. We had thirteen acres. st year we had twelve acres and there was y a little over half enough to fill the silo. have five head of horses. Two are bay, o are brown, and one is grey. The grey got foot cut in the fence early this summer. also have a pony. Well, I will close, wish- the juniors good luck.
Colorado. Victor Allen.

Hoard's Dairyman Juniors:—While I have ie I will write you a letter. I am writing at school. I am in the seventh grade. This my third letter to the juniors. I live on a m of 73 acres and we have 13 cows, 1 bull, rearlings, and some of this spring's calves. ey are all grade Jerseys except 1 cow, which a Holstein. We have about 29 sheep. They all Cotswolds and papa sold 12 of them day.
We have only five hogs and six pigs now. pa sold three of the pigs. He sold four fat s just the other day. They are high now.
We have lots of good corn and are going to our silo.
have three of my Belgian hares yet.
have a mile to go to school but it is all ked now. They were rocking the road in nt of the schoolyard today.
will close for this time, wishing to hear m you soon.
Oregon. Leland McNair.

Cow Thirst—
Stealthy Thief of Your Dairy Profits

A JAMES Drinking Cup in place on the stall—the first and **only** removable gravity cup on the market

Ready to take cup from stall post for cleaning

Lifting the cup from stall post before pouring out stale water for cleaning

Smooth, Easy to Clean

The Trough Method of Watering is Robbing You of Profits of $4.00 to $8.00 Per Cow

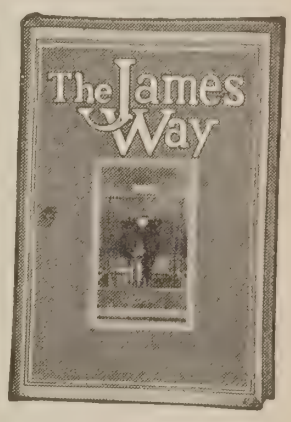
The milk-making *value* of a *constant* supply of fresh water to the cows is not sufficiently recognized.

No cow will drink as much as she needs from an icy trough—and what she does drink is too cold. All your cows are *handicapped by thirst* during most of the day and night—if you depend on trough watering during housed-in-period. That means that they are robbed of the water they *must* have to digest their food—to make milk. Too little water means too little milk. Water must be where the cow can get it—every hour of the 24. Otherwise, a part of the milk-making power of her food is wasted. That waste spells a distinct *loss* of one to two pounds of milk per cow per day.

Rich Milk is 87% water. Just plain water is the cheapest dairy ration—*and one of the most important.* You will *gain* from one to two pounds of milk per cow per day—a total gain of from 200 to 400 pounds of milk *more* per cow during the barn-feeding months, by installing James Drinking Cups in your dairy barn.

JAMES Drinking Cups

Either Gravity or Pressure System



MAKE MONEY OUT OF WATER

This gain in yield spells a *sure* profit of from $4.00 to $8.00 per cow. It means that the James Drinking Cups will *more than pay for themselves the first season.*

In fact, John Hetts, one of Wisconsin's best known breeders, declares:—"With one cow of my herd, the James Drinking Cup paid for itself *inside of 10 days in increase of milk yield.*"

The James Drinking Cup installation is built on the gravity system. Also if desired equipped for pressure system. Note the photos to left and see how easy these cups are lifted from their positions, for thorough cleansing. The cups are located between the stanchion and stall post—see cut at top—the handiest place for the cow. This makes it harder for her to toss feed into the cup—water is kept clean longer. The water flow is regulated by special extra-sensitive valve designed by us. Works perfectly *no matter what the water pressure is.* Prevents water passing from one cup to another—prevents any overflow and flooding of barn. Operates absolutely automatically.

The ingenious James Regulating Tank keeps the water *constantly* at the right level in drinking cups. Marvelously sensitive to slightest out-flow of water—quick as a flash in shutting off or feeding in water as needed.

SEND FOR A FREE COPY OF THE "JAMESWAY"

At least, investigate this way to "*Make Money Out of Water*". Do so today. Send for booklet. Get a copy of that famous book, "*The Jamesway*", the authoritative book on barn building and equipment. Even though you are not thinking of building or remodeling now get it anyway. Send the coupon today.

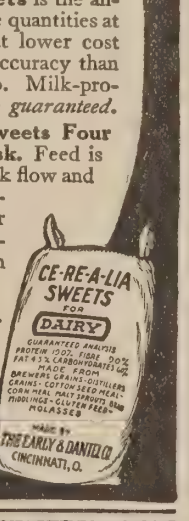
Ce-re-a-lia Sweets



FOR ECONOMY

You know from experience what's *best* for your cows—cottonseed meal, malt sprouts, bran, middlings, gluten feed, etc.—molasses to make the feed tasty.

Your war-time problem is how to have all these materials on hand at all times without paying prohibitive prices.

Ce-re-a-lia Sweets is the answer. We buy large quantities at lower prices, mix at lower cost and with greater accuracy than you can possibly do. Milk-producing results are *guaranteed.*

Try Ce-re-a-lia Sweets Four Weeks At Our Risk. Feed is absolutely free if milk flow and butter fat show no increase. Ask us for particulars. Meantime, order through your dealer.

The Early & Daniel Co.
301 Carew Bldg., Cinn., O.

A Better Way of Sealing Preserves, etc.

In putting up preserves, catsups, chow-chow, chili-sauce, berries, Indian Relish, etc., don't follow the troublesome paraffine wax method of closure.

The better and easier way is to use a MIDGET CROWNER and seal your bottles (up to 14 ins. in height and 4 ins. in diameter) with air tight Crowns (3 sizes).

In storing condiments of all kinds for future use you will find this the safest method of sealing.

Write for full particulars.

THE CROWN CORK AND SEAL COMPANY
Baltimore, U. S. A.

How the packers have helped to develop good stockyards

—and how this has benefited you as a producer

WHOSE job is it to provide and maintain stockyards, or markets, for the open buying and selling of cattle?

Who shall see that these markets have good pens where your stock can be properly watered, fed and taken care of until sold?

Stockyards, in early days, were not efficiently managed, and were not financially attractive to investors, except in the largest markets.

As the packers built their big-capacity plants at the various live-stock centers, they naturally became interested in helping to develop adequate stockyards facilities, where stock raisers could ship their animals.

The present high efficiency of most of the principal stockyards is due largely to the time, the effort, and the money the packers have put into them.

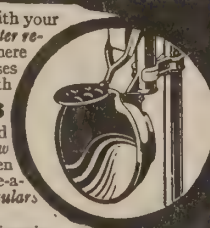
All stockyards, including those in which packers are interested, are conducted as *public* market places for the benefit of all.

They are open to all—to producer, commission man, dealer, speculator, the packer's buyer—and with exactly the same rights to each.

Packer-ownership gives no special advantages to the packer and no control over live-stock prices.

These spot-cash markets have been a factor of very great importance in promoting the growth of the live-stock industry.

If stockyards efficiency can be increased by Government ownership and operation, all well and good. Swift & Company is content to stand on its record of having helped the live-stock industry by the part it has played in developing these market places.



Swift & Company, U. S. A.

A nation-wide organization owned by more than 22,000 stockholders

20 to 25% Bigger Winter Milk Yields

WITH pure, rich milk analyzing 87% water—and with your winter herd *getting only ¼ to ⅓ of their natural water requirement from icy outdoor tanks*, you can see where cold weather cow-thirst is one of the biggest causes of your year-after-year winter milk shortages. With **Simplex Improved Water Bowls** your cows drink "to their hearts' content" day and night. Result—*20 to 25% more milk from every cow all through the housed-in season.* And no more frozen tanks—no tank-heater makeshifts—no more twice-a-day "herding out" periods. *Write for Full Particulars on the Only Drop-Down Water Bowl on the Market.*

F. Rassmann Manufacturing Co., 31 Mill Street, Beaver Dam, Wisconsin.

The Only "Drop Clean" Water Bowl Made

It PAYS to GRIND ALL GRAINS

Look to the Grinders. They do the work! Bowsher's Cone-Shape grinders are the correct principle in Feed Mill construction. They mean larger grinding surface close to center of Shaft; thus More Capacity, Lighter Draft, Longer Life.

"Desire to express my appreciation of the long-lasting, trouble-proof Bowsher. Have used a No. 4 ten years with less than One Dollar per year for repairs." *R. W. Watt, Jacobsburg, O.*

Efficient Operation of a Pasteurizing Plant

The primary purpose of pasteurization from the sanitary standpoint is the destruction of all pathogenic organisms in order to make milk safe. Where milk is properly pasteurized, the disease producing organisms are destroyed as are approximately 99 per cent of all the bacteria.

In operating pasteurizing plants two main objects are desired, namely: the destruction of all disease producing bacteria and at the same time reduction of the total bacteria in the milk and the economical use of heat, power and labor. Unless the first is accomplished the second is of little account.

In order to properly pasteurize milk, two things are necessary:

1. Heating and holding the milk at the proper temperature with accurate control of the temperature. (The milk should be heated to 142 degrees F. for 30 minutes—a variation of 2 degrees above or below this temperature is allowable.) After heating the milk must be cooled to 50 degrees F. or below.

2. All apparatus which comes in contact with the milk must be thoroughly cleaned and sterilized after each using.

Unless there is an automatic temperature control the steam and water valves must be carefully watched in order to maintain the proper temperatures. If the milk is not heated to, and held accurately at the proper temperatures, good results cannot be expected. All pipes or "pockets" in which milk is held during the pasturizing or holding processes should be insulated as otherwise the holding temperature cannot be maintained. Great care must be exercised to see that none of the valves leading from the heater or holder leak.

The cleansing and sterilizing of the apparatus is absolutely essential to good results. All milk pipes, pumps and filler valves must be taken down after each run, thoroughly cleaned and rinsed and then sterilized with steam. At least 5 minutes of steaming is necessary. The pasteurizer must be thoroughly washed, rinsed and steamed. Some plants get poor results after heating and holding the milk at proper temperature because the pipes and other apparatus are not properly cleansed and sterilized. The bottles and cans must be thoroughly cleansed and sterilized or the value of the pasteurization will be greatly reduced.

Of a considerable number of pasteurizing plants recently visited in southern and middle western cities, only about 10 per cent were getting the best results from the pasteurizer. The principal causes of trouble were:

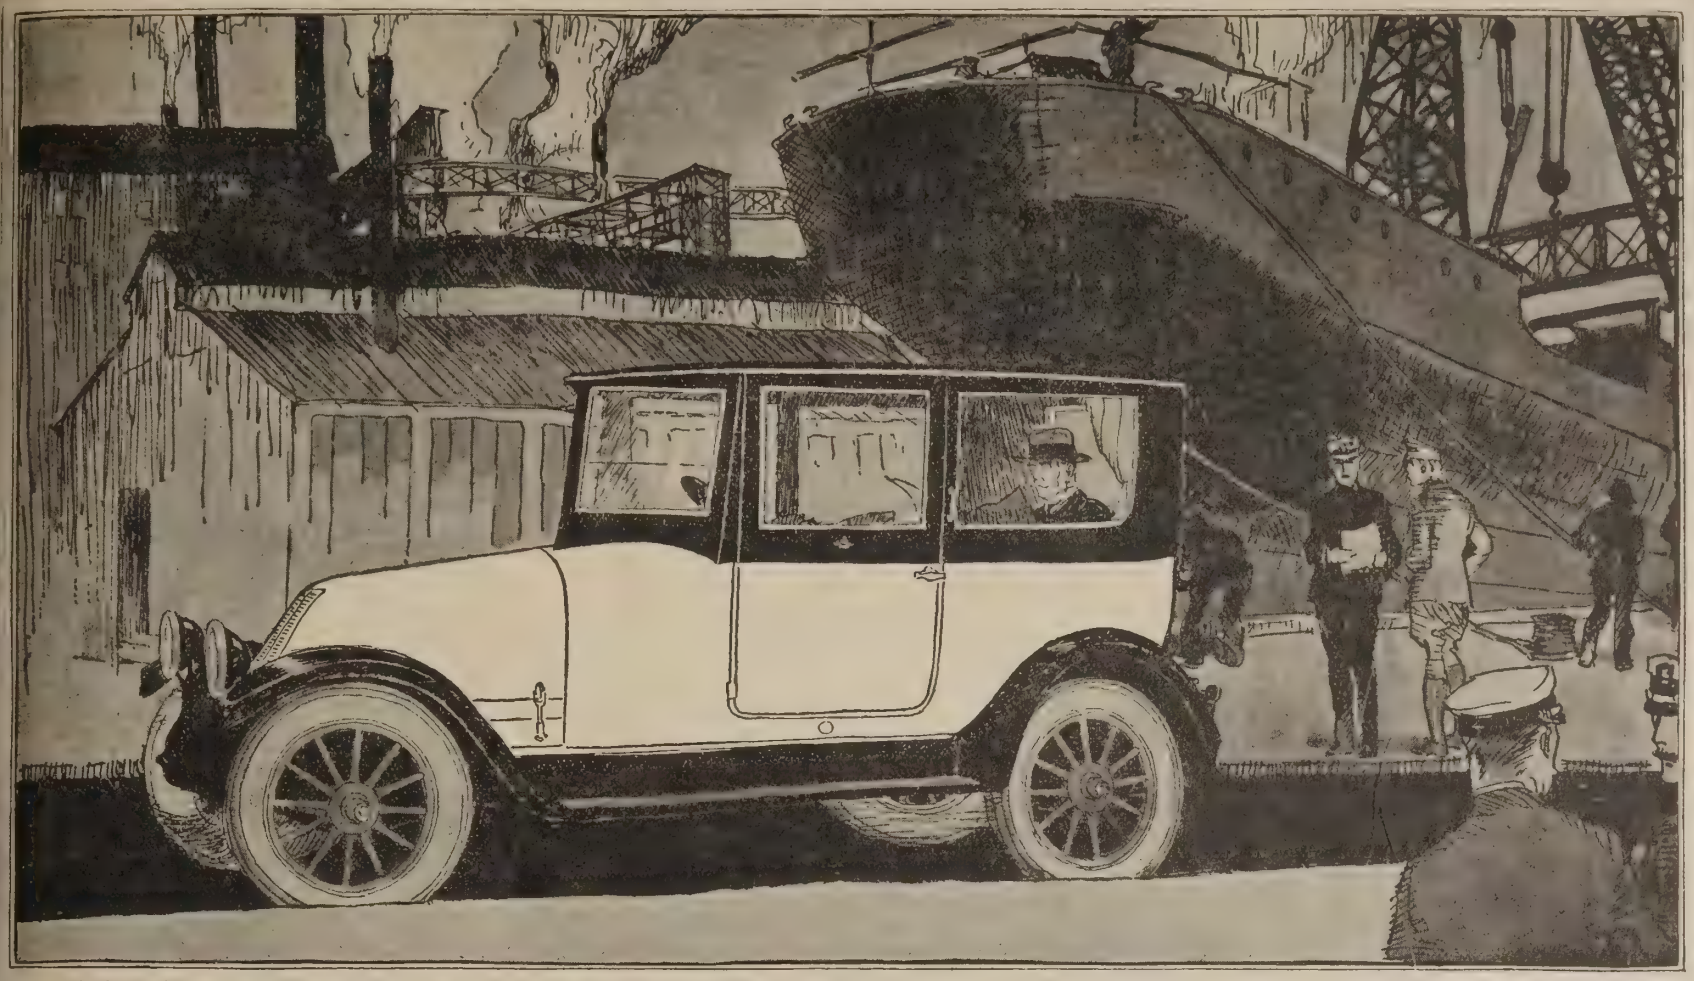
1. Pipes and pumps not cleaned and sterilized.

2. Filler and valves not cleaned and sterilized.

3. Milk rushed through the apparatus too fast.

4. Milk not heated high enough or held long enough.

5. Recording thermometer not accurate.



6. Raw milk added to pasteurized milk in vat (vat pasteurizer) before the latter is all drawn out.

7. Pumps and piping not of sanitary construction.

8. Leaky or inaccurate valves which allow some of the milk to get through the apparatus without being held the proper length of time.

9. Formation of foam in the holder.

The proper pasteurization of milk is a very simple operation and there is little excuse for the poor results that are obtained at some plants. Poor results are usually not the fault of the type of pasteurizer used but in the way in which it is handled.—DAIRY DIVISION.

THE FRANKLIN CAR

And the Present-Day Standard of Motor Car Service

Frequently special conditions give new significance to old facts. And *now* is the time when conditions give added importance to the long established economy facts of the Franklin Car—a steady day-by-day delivery of

20 miles to the gallon of gasoline—
instead of the usual 10

10,000 miles to the set of tires—
instead of the usual 5,000

For when the Nation is geared to tremendous effort, the aid of an efficient automobile can do much to bring about the vitally necessary economy of gasoline and tires.

The simple Franklin facts speak for themselves.

If all cars were as efficient as the Franklin, on the basis of its daily performance, the automobile owners of the country would save this year 400,000,000 gallons of gasoline and would cut their tire bills $192,000,000.

For sixteen years the Franklin Car has delivered an economy consistently ahead of the times. Besides this performance in the hands of owners, it has won every prominent official economy test ever held.

Moreover, the Franklin depreciates 50% slower than the average car—an important fact today when conditions demand that motor cars give longer service than ever before.

Its ability to render this remarkable economy and long life is due to engineering principles involving the simplicity of Direct Air Cooling, Light Weight and Resilient Construction, as opposed to water cooling, heavy weight and rigid construction.

The Franklin Car delivers a war-time motoring service simply because the Franklin Company has held true to the principle that the main object in owning an automobile is transportation, with the greatest comfort, safety and reliability—at the least expense.

FRANKLIN AUTOMOBILE COMPANY, SYRACUSE, N. Y.

Orders for Franklin Cars for post-war delivery will be filled in the order of their receipt by our dealers.

"You can tell a real patriot by the way he works—Full-time work by both employers and wage earners will win the war." W. B. Wilson, U. S. Secretary of Labor.

There's Cheer in the

Pictures from Home

To a homesick boy at the front, a picture of Dad waiting at the end of the lane while "Shep" brings up the cows is worth more tnan the Croix de Guerre.

Pictures of mother, how much they mean to him now! And of kid sister—perhaps she is "wearing her hair up" by this time—all the old familiar scenes around the farm, yes, and that little girl with the big blue eyes tiat lives down in the village—these will mean a world of comfort to the boy who is lonesome among a million strangers.

The Y. M. C. A., the Red Cross, the Knights of Columbus and kindred organizations are doing a world of good in ministering to the bodies and minds of our boys. But in their hearts, homes are first. Cheerful letters and cheerful pictures from home—these will keep their hearts light ana their courage high.

EASTMAN KODAK COMPANY

399 State Street ROCHESTER, N. Y., *The Kodak City*

Butter Awards at the Nationa Dairy Show

Gold medal prizes awarded in th various butter classes entered at th National Dairy Show went to th Athens State Hospital of Ohio, whicl scored 94½ in the dairy butter class the Hutchison Co-operative Creamer Co. of Minnesota, 96 in whole mill butter class; and the Fox River But ter Co. of Illinois, score 96 in th hand separator class.

In the whole milk butter class silve medals went to the Thompson Cream ery Co. of Ohio, score 93½; Holto Creamery Co. of Kansas, 95; Brook haven Creamery Co. of Mississippi 93.

In the hand separator butter clas silver medals went to White Moun tain Creamery Co. of Ohio, 93; Fal furrias Jersey Dairy of Texas, 93 the Brookhaven Creamery Co. o Mississippi, 93; New Era Creamer Co. of Michigan, 93½; Elgin Co-op erative Creamery Association o Minnesota, 95½; State Line Cream ery of Iowa, 93½; Schlosser Broth ers of Indiana, 93½; Volga Co-oper ative Creamery of Wisconsin, 93½ In the dairy butter class one silve medal goes to the Animal Husbandr Department at Alabama, score 93.

Bronze medals awarded for en tries in the whole milk butter clas are: Plato Dairy Association of Min nesota, 94; Youghart Products Co. o Ohio, 93½. In the hand separato class they are: Frontenac Creamer of Minnesota, 95¼; Farmers' Co-op erative Creamery Association o Michigan, 93; Kanawha Creamery Co of Iowa, 93; Fox River Butter Co of Indiana, 93; and Luck Co-opera tive Butter and Cheese Co. of Wis consin, 93¼. In the dairy butte class, C. O. Wydman of Ohio, 93.

Cheese Awards At National Dairy Show

In the cheese classes at the Nation al Dairy Show, John Lengacher o Ohio won the gold medal on his Swis cheese entry that scored 96. Th Youghurt Product Company of Ohi won the gold medal for cottage chees with a score of 95. The gold meda for American Cheddar cheese wa won by C. H. Schneider of Wisconsir who scored 97; that for Brick chees was awarded to Jacob Mueller of Wis consin, score being 95; and that fo Limburger cheese went to Augus Martin of Wisconsin, score 96.

Gold medal awards were made t the highest scoring entry in eac class. Silver medals, made to th highest scoring entry from each stat providing score is not under 93, an the bronze medals to the next highes score from each state not under 9 are as follows:

American Cheddar cheese: Youn Harris Cheese Factory, Georgi score 94½, silver medal; Reyman Memorial Farms, West Virgini score 95, silver medal; Hugh Barbe Oregon, score 94, silver medal; Ro coe Center Butter and Cheese Assoc ation, Minnesota, 95, silver meda Virginia Independence Cheese Fa tory, Virginia, 93½, silver meda Cane River Co-operative Dairy Ass ciation, North Carolina, 95, silve medal; H. A. Kalk, Wisconsin, 96½ bronze medal; Leon von Arx, Minn sota, 94½, bronze medal; Spring Va ley Cheese Co., Virginia, 93, bronz medal; and Plumb Tree Co-operativ Cheese Co., North Carolina, 9 bronze medal.

Swiss cheese: Godfrey Muste Ohio, 95, silver medal.

Brick cheese: Oswald Schneide Wisconsin, 94, bronze medal.

Limburger cheese: Fred Bohle Wisconsin, 95, bronze medal.

Cottage cheese: Athens State Ho pital, Ohio, 94, bronze medal.

The Winchester pattern; 320 pellets out of a possible 431, or 74% of the shot charge, evenly distributed. No birds get through.

A quick eye and a good shot pattern

A QUICK eye and a good shot pattern, that's the game-getting combination. Given an old-timer with a reliable gun in his hand and the rest of the story is up to the shot pattern.

Now the secret of good patterns is in the control of the gas blast from the exploding powder. This in turn depends upon the *wadding* in the shell.

The wadding, like the piston head of a gas engine, must give the explosion something solid to work against so that the shot may be *pushed* out evenly.

It must expand and fill the tube of the barrel, completely sealing in the gas behind it. No gas must escape to scatter the shot.

It must offer just the right amount of resistance to the explosion so as to develop uniform pressure and high velocity without danger of jamming the pellets out of shape at the "choke" or muzzle constriction.

The Winchester system of wadding. The wadding expands evenly, sealing in the gas blast all the way to the muzzle, where the wadding is checked by the "choke" or constriction. The shot cluster travels on ahead unbroken. Actual test target 320 pellets out of 431, or 74% of the shot charge (1¼ oz. of 7½ chilled) inside a 30-inch circle at 40 yds.

The Winchester System

Winchester Wadding is the result of repeated experiments to determine the most efficient control of the gas blast.

The special construction of the *Base Wad* gives what is known as *Progressive Combustion* to the powder charge.

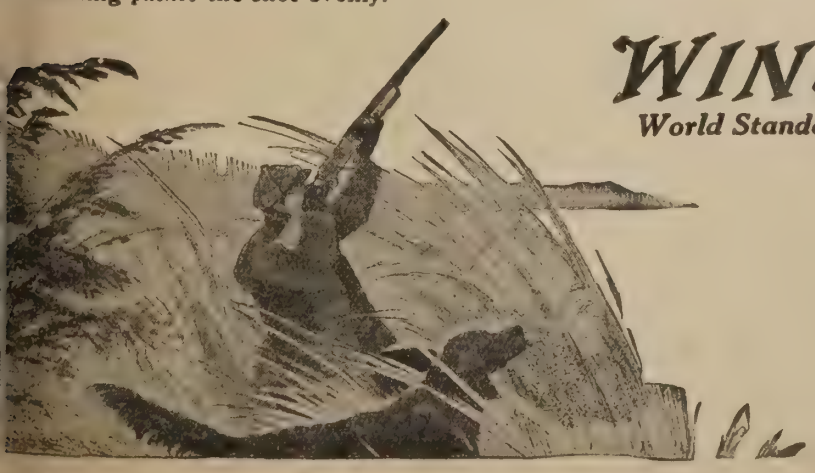
Combustion spreads instantly through the powder charge. By the time the top grains of powder become ignited the *full* energy of the burning powder behind is at work. Though the explosion is almost instantaneous, it is none the less *progressive*, the final energy and maximum *velocity* of the completely burned powder being developed at the *muzzle* where it is most needed.

Meanwhile, under the heat and pressure of combustion, the tough, springy *Driving Wad* has expanded to fill the barrel snugly all around. No gas escapes. It is completely sealed in. The wadding *pushes* the shot evenly.

At the muzzle, the shot pellets slip out without jamming, while the wadding is checked for a brief interval by the constriction of the muzzle. *It follows some distance behind the shot pattern.*

The shot cluster travels on unbroken by gas blast or wadding and makes the hard-hitting, uniform pattern for which Winchester shot shells are world famous.

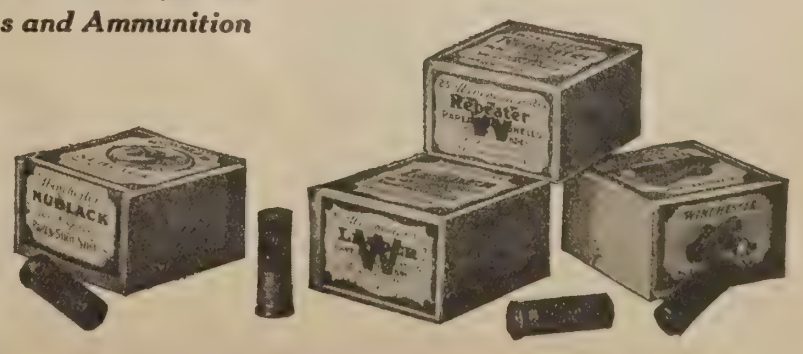
Fish-Tail Flash. All Winchester smokeless shells are made with the new Winchester Primer—the quickest and most powerful shot shell primer made. Its broad *fish-tail* flash gives even and thorough ignition. Every grain of powder is completely burned up before the shot charge leaves the muzzle.



The Crimp. The required degree of pressure necessary in seating the driving wads is worked out in combination with the *hardness* or the *softness* of the *crimping* required for any particular shell.

Waterproofing and Lubrication. In the cold, damp air of the marshes, or under the blazing sun at the traps, Winchester shells will always play true. Winchester waterproofing process prevents them from swelling from dampness. Special lubrication of the paper fibres prevents brittleness and splitting in dry weather.

Uniform Shells. From primer to crimp, Winchester shells are constructed to insure the maximum pattern possible from any load and under all conditions. 25,000,000 rounds of ammunition are fired every year in testing Winchester guns and ammunition. $100,000 is spent annually in the inspection and testing of finished shot shells alone.



Clean hits and more of them

To insure more hits and cleaner hits in the field or at the traps be sure your shells are Winchester Leader and Repeater for Smokeless; Nublack and New Rival for Black Powder. Write for our Free Booklet on Shells. **Dept. E-51, Winchester Repeating Arms Co., New Haven, Conn., U. S. A.**

WINCHESTER

World Standard Guns and Ammunition

Mammitis

I have had, from time to time, cows whose bags became hard and the milk from one quarter would become very thick and eventually get watery and finally dry up on that quarter. Sometimes two quarters would get affected and eventually I would be compelled to dispose of the cow.

I have had a good deal of trouble within the last few years and at times, I am inclined to blame my farmers. I am free to confess, however, that I do not know what causes the trouble and I would thank you to enlighten me and advise me what should be done to avoid this trouble in the future.

Lemont, Illinois. G. S. W.

Germ infection is the common cause of such destructive attacks of mammitis (garget). The infection is carried from cow to cow by the milker's hands or is contracted from contaminated floors, gutters, or cups of a milking machine. Make it the invariable rule to isolate a cow the moment anything goes wrong with her udder and keep her separate until perfectly recovered. It is rare, however, for a cow perfectly to recover from a severe attack of mammitis no matter how scientific the treatment may be. Under the circumstances, we should advise you to isolate and feed off every cow that has chronic mammitis or a "spoiled quarter" discharging pus or abnormal milk. Then cleanse, disinfect, and whitewash the stable and, if the stall and floor are of cement, cover the rear part of each with cork brick or plank. If a milking machine is used, it will have to be more thoroughly cleansed and sterilized daily. Treatment for mammitis often has been prescribed here, but your veterinarian no doubt has a favorite method of treatment and should follow that. In contagious mammitis, it would be well for him to give hypodermic treatment with serum or a bacterin.

Undeveloped Quarter

I have a 2-year-old heifer that is due to freshen in February and both back quarters and the right front quarters of her udder have started to develop but the left front quarter seems to be on the standstill. Is there anything I could do to that quarter to help it grow with the other?

Illinois. J. F. G.

It may be that the three quarters are abnormally congested and we should advise you to rub it well twice daily with camphorated oil. Do not use this on the unaffected quarter but massage it very thoroughly in every direction three times daily, using a little vaseline or sweet oil on the hands.

Fits

I have lost several calves from one to two months old. I feed them milk and skimmilk about half and half, one-half gallon twice per day. They seem to do well but all of a sudden you will hear one bawl and start running and fall. They rear up and fall backwards. They generally die in from one to two hours after this strikes them.

Weatherford, Texas. J. L. L.

Such cases of fits or convulsions are very common and generally fatal. Often they are induced by too fast drinking of milk when the calf is very hungry. Feed less milk and three times a day, remove separator foam and bring the milk to blood heat by the addition of hot water. Make the calves drink slowly. Keep the bowels active. Indigestion usually is present in such cases and a full dose of castor oil in milk should be given if any symptom of indigestion is noticed.

ABORTION

Dr. Geo. Hollabush's cure for abortion and general tonic for cows and mares will prevent abortion and make prompt breeders and correct failure to clean. I guarantee and refund money if not satisfactory. Send for circular.

HERE'S A REAL BULL

His Sire is May King's Vrangue of Ingleside, the May Rose sire whose first ten tested daughters averaged over 600 lbs. butterfat as 2-yr.-olds and 3-yr.-olds. His Dam is an imported cow now on test that will finish her year with at least 400 lbs. fat, milked twice daily. The Bull himself is a dandy—a calf that would show well in any ring. The right kind of a herd header to use.

Remember he's guaranteed to be right. Write me.
W. A. LAWSON, Rosendale, Wisconsin

Lovell Hutchen's Registered

Guernsey Dispersion

Fort Atkinson, Wis.

Friday, Nov. 8, '18

As stated in last week's advertisement the dispersion of this entire herd presents unusual opportunities to Guernsey breeders in a position to do A. R. work, because the herd is bred right and has the constitutional vigor to go through an A. R. test.

There are 2 daughters, 5 granddaughters and a number of great granddaughters of *Lord Mar* in the herd. Also granddaughters of *Dairymaid's Glenwood of Pinehurst*, a full brother to the celebrated *Dairymaid of Pinehurst*. Likewise granddaughters of *Miss Luetilius' Hambro*, a grandson of Dolly Dimple's *May King of Langwater*. Then, too, there is much blood of the two noted sires *Glenwood's Boy of Haddon* and *Imp. Raymond of the Preel* in the herd.

One of the greatest females in the herd is a daughter of *Dairymaid's Glenwood of Pinehurst*, a full brother to Dairymaid of Pinehurst leader in Class B with 910.67 lbs. fat. Beside being a daughter of Dairymaid's Glenwood of Pinehurst she is a granddaughter of the great *Imp. Lord Mar*, the sire of so many great cows, including *Imp. Jessie Rose X*, one of the greatest high record show cows ever produced.

Another very fine cow in the herd is a granddaughter of Imp. Lord Mar and Imp. Raymond of the Saints. She is a large, well developed cow of rugged constitution, the kind that can stand pushing. Herd is tuberculin tested.

In addition to the herd all machinery necessary for running an average sized farm will be sold.

The farm is on the Whitewater road mid-way between Ft. Atkinson and Whitewater. Send for catalog.

Lovell Hutchens, Prop.,

Fort Atkinson, Wis.

J. E. Mack, Auctioneer. Herbert Main, Sale Director.

Third and Last Call

For the

Ormsby Jane King 2nd

Two Nearest Dams Average 35.64

Ready For Service

HERE IS AN OPPORTUNITY for some small breeder to get a sire of exceptionally rich breeding and splendid type at a very reasonable figure.

ORMSBY JANE KING 2nd was a year old June 24th. He carries a straight topline and is nicely marked.

HIS SIRE, ORMSBY JANE KING, is a son of the "Great White Heifer", Ormsby Jane Segis Aaggie, who has a record of 46.33 lbs. butter and 879 lbs. milk in 7 days.

AS A FOUR-YEAR-OLD she broke the world's records by producing 44.42 lbs. in 7 days and 183.16 lbs. in 30 days.

NO OTHER COW IN THE WORLD has ever made two records above 44 lbs.

ORMSBY JANE SEGIS AAGGIE has a three-quarter sister, Ormsby Jane Piebe, with 38 lbs. in 7 days.

ORMSBY JANE KING'S dam and two nearest dams of his sire average 37.16 lbs. butter in 7 days and 147 lbs. in 30 days. Nothing left to be desired on the sire's side of the pedigree, is there?

THE DAM OF ORMSBY Jane King 2nd is Moneta Pietje with a record of 24.95 lbs. butter in 7 days.

SHE IS A SISTER TO Agnes Pietje and Ilmata Pietje, both with seven-day records above 34 lbs. as three-year-olds. Another 3-year-old sister made over 31 lbs.

THE DAM IS SIRED BY Hillside Della Pender Pietje who has three daughters with records from 31 to 34.86 lbs. as three-year-olds and six three-year-olds averaging above 30 lbs.

THE NEXT SIRE IS Woodcrest Pietje with 60 A. R. O. daughters, over half of them having over 20 lbs.

SO YOU SEE both sides of the pedigree are full of great sires and producing dams and besides this Ormsby Jane King 2nd is one of the first grandsons of the "Great White Heifer".

WRITE US TODAY FOR pedigree and full particulars.

The E. C. Schroeder Farms, Box 576-H, Moorhead, Minn.

The Winship Farm Bulls

Are From Persistent Milking Dams

The 18 cows milking in my herd during April averaged 960 lbs. milk per day and 52 lbs. butterfat, each, for the month. This included heifers milking since last September, October and November. These dams represent the best blood lines of the Creamelle, Johanna, Beets, and Ormsby families.

Sired by Aaggie Burke Cornucopia De Kol

A 29-lb. bull, who traces back directly to the two greatest foundation cows of the breed, Spring Brook Burke and Aaggie Cornucopia Pauline. He is also closely related to the two champion 31,000-lb. milk cows.

FOR CATALOG ADDRESS

J. B. Turner, Secy., Valparaiso, Ind.

Auctioneer: Col. J. E. Mack. S. T. Wood in the box.

PRESENT labor conditions, and the possibilites of the owner being called to service, make it necessary for the Homestead Farm to materially reduce its fine herd of Holsteins.

PUBLIC SALE

Dover, Delaware

November 20th, '18

Probably 40 head of choice cows and two-year heifers, most of them bred to FINDERNE PRIDE FAYNE, a son of Finderne Pride Johanna Rue, with a seven-day record of 36.87 lbs. and a world's record of 1470 lbs. in 365 days, will be sold at above date. The cows have good A. R. O. Records, and the heifers are of fine breeding. Here will be an opportunity to get high class cattle from a clean herd at your own price. Two or three bull calves of Finderne Pride Fayne will also be sold.

HOMESTEAD FARM, Dover, Del.

Daniel O. Hastings, Owner, Wilmington, Delaware.

You Can't Afford to Overlook This Young Bull

Canary Ormsby Johanna De Kol 256894.

A SON OF THIS THREE-YEAR-OLD FOR SALE.

Canary Ormsby Johanna DeKol produced 28.18 lbs. butter, 503 lbs. milk in 7 days and 111.95 lbs. butter, 2,318.6 lbs. milk in 30 days at the age of 3 years, 1 month, 6 days. Her sire, Canary Fobes Bessie Homestead (20 A. R. O. daughters), is a 31-lb. grandson of Canary Paul and Homestead Jr. DeKol. Her dam is a 17-lb. 2-year-old daughter of Sir Ormsby Johanna DeKol (31 A. R. O. daughters, 2 above 30 lbs.). Every dam in her 4-generation pedigree has a good A. R. O. record.

The Sire of This Young Bull is Mutual Fobes Longfield DeKol 82959, a son of Mooie Mutual DeKol and from a daughter of Homestead Jr. DeKol that, as a Jr. 3-yr.-old, made 30.04 lbs. butter, 630.8 lbs. milk in 7 days and 124.42 lbs. butter, 2,651.6 lbs. milk in 30 days.

This youngster is well marked and as straight as they make them; so are his sire and dam. Moreover, he's a descendant of proven producers from one end of his pedigree to the other. His dam's record as a 3-yr.-old is bound to be increased. There's no question but that he'll prove to be a top notch herd sire. He was born April 10, '18. Write us about him today, for he won't be here long.

QUACKENBUSH for QUALITY HOLSTEINS

My Herd Sire, RAG APPLE PONTIAC is a bull of high class breeding. He is half brother to the famous $25,000 sire, *Rag Apple Korndyke 8th*, the sire of the $53,200 bull calf, the World's Champion 42-lb. 3½-year-old and the youngest 30-lb. heifer. He derives 43¾% of his blood from the noted Century sire, *Pontiac Korndyke*, the sire of the World's Champion 30-day butter producer and who has more 30, 36, and 40-lb. daughters and 1,000-lb. year-record granddaughters than any other bull. He is a grandson of the only double century sire, *King of the Pontiacs*, who has more 40, 30, and 20-lb. daughters than any other bull. He won first prize at the La Crosse, Wis., Fair this year and a daughter of his won first at the Wisconsin State Fair.

BOTH MALES AND FEMALES FOR SALE

Females of all ages. Some are springers and some are bred to the above sire. Some of the cows have A. R. O. records up to 27 lbs. in 7 days.

This stock is of the most popular breeding, such as Korndyke, Pontiac, Hengerveld DeKol, King Segis, Polkadot.

Bull Calves at a Bargain; ages from 1 week to 7 months. Sired by *Sir Pontiac Wayne DeKol 3rd*, a grandson of *Sarcastic Lad*, the sire that won Championship at the World's Fair—and by *King Segis Pontiac Polkadot 8th*, a grandson of *King Segis Pontiac* and *Johanna McKinley Segis*.

Write at once or come and see me. **W. W. QUACKENBUSH, West Salem, Wisconsin.**

PERCHERON HORSES We have several registered fillies and young stallions; also two aged stallions that we will sell for less than their real value if taken at once.

DUROC JERSEYS Anything you want in Duroc Jersey Swine.

All cattle sold on a 60-day retest guarantee. Write us at once before the best ones go.

EDGEWATER STOCK FARM, Fort Atkinson, Wis.

A Bull That Will Suit You

He's sired by Dutchland Colantha Belle Boy whose dam is a 27.5-lb. 3-year-old daughter of Hengerveld De Kol, and whose sire is the great Colantha Johanna Lad. His dam is Johanna Theresa 2d, a granddaughter of Sir Johanna De Kol. She made 21.68 lbs. butter in 7 days, and 782 lbs. butter, 18,600 lbs. milk in 1 year. Moreover she's a show cow,—took first as a 4-year-old at the 1911 National Dairy Show. This youngster, just a little over 6 months old, is backed by short and long time records. Individually he's a dandy, nearly half white, just the kind you've been looking for. Other young bulls by the same sire and from A. R. O. dams for sale. Write

WAYSIDE STOCK FARMS, A. L. Williams, Est., C. A. Williams, Exec. Fond du Lac, Wisconsin.

A Few Good Ones For Sale

I am offering yearling and bred two-year old registered heifers for sale. Daughters of King Segis Pontiac Polkadot 8th, he a grandson of King Segis Pontiac and from one of the good daughters of Johanna McKinley Segis. A number of these heifers are bred to Sir Aaltje Pontiac Hengerveld, a 33.68-lb. son of Hengerveld DeKol Beets. Also several good young bulls from A. R. O. dams and a few cows in calf to the 33-lb. bull. Write me or come and see them for yourself.

J. D. McDONALD, WEST SALEM, WISCONSIN.

A. R. O. Holstein Cows and Heifers

In order to make room in our barns we must sell a number of cows and heifers that are backed by large official milk and butter records. They are bred to our great herd sire, King Korndyke Veeman, whose two nearest dams average over 37 lbs. butter in 7 days. Write for particulars or come to

150 HEAD—Cows Up to 30 lbs.—Yearling Bulls up to 31 lbs.—150 HEAD

WATERTOWN HOLSTEIN SALES COMPANY, - Francis Darcey, Secretary, Watertown, Wisconsin

The Holstein Breeders' Sale Co. Pavilion of Fond du Lac, Wis.

Built at a cost of $35,000. Incorporated and organized by 300 of the largest breeders from 14 counties.

Steam heat, Electric lighted, dining hall and all modern conveniences.

Our new $35,000 Sale Pavilion where the sale will be held.

THE FIRST SALE

November 14th and 15th, 1918

Will Be Practically a Milkers Sale

175 Head. 125 Cows and Heifers Bred. 25 Heifers. 25 Bulls

There will be 125 cows and heifers fresh or to freshen before spring. Most of them bred to 30-lb. sires or better.

There will be 2 25-lb. cows one 24.74 and several cows with good yearly records. Also 25 heifers not bred.

There will be 25 bulls most of them ready for service.

There will be 3 30-lb. bulls including Reid and Dawson's 30-lb. herd sire with a yearly record of over 1000 lbs. butter.

One 28-lb. bull whose 5 nearest dams average over 1000 lbs. butter one year.

One from a 27.25-lb. 4-year-old. 2 from 26-lb. dams.

The leading feature will be the dispersion of the Reid and Dawson herd of 30 head. The cows all have good A. R. O. records including 2 25-lb. cows. There are 12 daughters of Sir Johanna Rag Apple De Kol whose dam's record is 37.09 butter 7 days.

All of the females old enough are bred to Meadowholm Ona Button Hartog, whose dam has a 30-lb. record also a yearly record of over 1000 lbs. butter one year. He will also be sold.

Another feature will be the dispersion of the James Sales herd of 25 head. The cows are all young and most of them will freshen about sale time. Most of the cows have A. R. O. records. There are 7 2-year-old granddaughters of Johanna McKinley Segis. They will sell their herd sire Colantha Sir Aaggie Rag Apple 2nd.

Another feature will be a consignment of 42 head from the Albert Frank herd. It will do your eyes good to look this herd over. There are 25 head bred to Mr. Frank's 35-lb. herd sire that he paid $3000.00 for at the Lake Mills Sale last fall.

There are 17 bred 2-year-olds and 10 bulls.

Catalogues ready Nov. 1st.

Auctioneers: Haeger, Mack, and Pohlman.

He traces direct to Colantha 4th's Johanna, Aaggie Cornucopia Pauline, Lilith Pauline DeKol, Caroline Paul Parthenea and other good ones. His dam has 733.98 lbs. in 1 year as a 3-yr.-old. His 7 nearest dams average 28.82 lbs. His 6 nearest semi-officially tested dams average 1,014 lbs. in 1 yr.

Five 2 and 3-year-old daughters of Johanna Colantha Sarcastic Lad, he with 75% same breeding as Colantha Johanna Lad.

A 16-lb. 2-yr.-old daughter of Aaggie Cornucopia Pauline Count 13th.

Queen of Cloverlawn—700 lbs. butter in 1 yr.

A 10 months old son of a 28-lb. cow that also made 931 lbs. butter in 1 yr.

A yearling son of a 21-lb. 3-yr.-old with 718 lbs. in 1 yr.

All of these young bulls sired by Cloverlawn Johanna Piebe whose 5 nearest dams average 23,809 lbs. milk and 1,070 lbs. butter in 1 year. All females consigned are bred to him.

Look up this consignment in your catalog or write me for further information.

JNO. PULS, HARTFORD, WIS.

LILITH SUSIE INGALLS 2D

30.59 lbs. butter, 516.50 lbs. milk in 7 days as a 4-yr.-old. 733.98 lbs. butter, 16,199.3 lbs. milk in 1 year as a jr. 3-yr. old. Her 10 months old son by Cloverlawn Johanna Piebe is in this consignment.

$1 Per Cow Per Month After Trial PAYS FOR THE PINE TREE MILKER

FREE Trial Demonstration

Not a cent to pay us in advance to TRY this Million Dollar Milker FREE on your farm and then only a small part to pay ***after*** trial, but ***only if satisfied beyond a doubt***—balance only $1 per cow per month. Pay from the ***cash savings*** it starts to earn ***at once.*** We could not make this offer, wholly at our risk, if we did not have the recognized highest-grade successful mechanical milker and the greatest possible proof. Proved by actual use and by every test. It is positively the 100% dependable milker, and we ask YOU to PROVE this for yourself.

World's Standard Mechanical Milker

Don't think of paying out a dollar for ***any*** milking machine until you write for our catalogs and complete facts.

Saving Millions in Wages and Ending the Milking Problem

Get this offer if you are milking twelve or more cows, grades or ***pure breds.***

The Cow's Adopted Child

Prove satisfaction first or "no sale." We install. We demonstrate. We show you how simply and satisfactorily you yourself, or a woman or boy or girl, or ordinary farm hand, can do the work of THREE hand-milkers with the Pine-Tree Milker. No obligation of any sort. If you are not entirely satisfied after trial, we'll promptly take the milker back.

A Year To Pay—3-Year Guarantee

Send no money. Not a dollar. No contract, no order, no agreement of any sort to make for this trial. We accept a small cash payment—***after demonstration trial,*** if purchaser is satisfied—and his notes for balance arranged on easy terms.

Read this! Most important is our iron-clad THREE YEAR GUARANTEE. It is plainly written out—legal binding on us for performance and service. It protects you on the durability, workmanship, high-grade materials and efficiency of the Pine Tree Milker—***for 3 years.*** Strongest, longest, complete guarantee on any milking machine made.

Increase Your Milk Production!

Actual tests made under high authorities have repeatedly proved that herds milked with a mechanical milker produced more milk and butter fats than when milked by hand. The gentle, uniform suction and squeeze—easy, steady, quiet—makes contented cows, month after month and year after year. That's why users call the Pine Tree Milker "THE COW'S ADOPTED CHILD." The cows take to it like they take to their own calves. They give down more milk and do not dry up as early.

The Million Dollar Milker

A million dollars, yes several million dollars the Pine Tree Milker will save in wages alone.

A million dollars, yes and over, will be saved in increased milk and fat.

A million dollars and more backed the inventor in developing the Pine Tree Milker.

A million dollars, yes ***two million dollars,*** worth of Pine Tree Milkers will be sold to the farmers on credit to show them what a wonderful saving the Pine Tree Milker will make for them in both labor and butter fat.

After years of perfecting and simplifying the best ideas of Europe, Australia, New Zealand and America we challenge the world with the Pine Tree Milker—the ***very last word in a perfect, successful, mechanical milker.***

Our exclusive Fool-Proof Pulsator, the heart of any milking machine, is the highest type of positive safety and efficient control. Our Double-Action Teat Cups give the most gentle, lifelike hand-milking action, closest to nature's own way. They "milk" as the calf sucks by gently squeezing and then relieving the pull by swallowing. The Pine Tree Milker is by far easier to handle, to clean, to keep in sanitary condition than any other milker ever made. It produces milk with smallest bacteria count.

have proved that the cows like the
Tree Milker and that two-thirds
labor is saved in milk
them this way.

ROCK VALLEY STOCK FARM
J. D. HETTS, PROP.
BREEDER OF HOLSTEIN-FRIESIAN CATTLE
FT. ATKINSON, WIS.

July 10, 1918.

Pine Tree Milking Machine Co.
Chicago, Illinois

I noticed your advertisement of a milking machine on "Free Trial on My Farm", and something moved me to answer it. I was surprised to find that you actually wanted to loan me a machine on absolutely free trial.

After your man had installed and showed us how to start it I personally kept watch of my cows. They are producing more than they ever have by hand milking.

My cows on official test are doing better.

I have not had a single case of udder trouble and I know I am producing cleaner milk than ever before. On top of this the saving in labor and the improved spirit of the men in my barn, both getting $50.00 a month which, plus their board, means a great surprise to me. I now use two men less in my barn, saving of not less than $150.00 per month, and I am now milking the entire herd in an hour and fifty minutes, whereas with the two more men it took us three and one-half hours.

Not a single cow has objected to being milked by the Pine Tree Milker. I find your machine so constructed as to be very easily and quickly cleaned.

As this letter would indicate, I am bubbling over with enthusiasm. I have already interested a number in this neighborhood to put in your milker and I only hope The Pine Tree Milker will have the success it is entitled to. I shall be very glad to show any prospective buyers my milking machine in operation at any time on my farm, which is about one-half mile from Ft. Atkinson, which is the center of the dairy industry of the United States.

With best regards, I remain

Yours very truly,

J. D. Hetts

HOARD'S DAIRYMAN

A WEEKLY JOURNAL DEVOTED TO DAIRY FARMING

olume LVI | FORT ATKINSON, WIS., NOVEMBER 8, 1918. | Number 16

MINNESOTA HOLSTEIN BREEDERS AT THEIR ANNUAL GATHERING

Dairymen Must Co-operate

MILO D. CAMPBELL, President National Milk Producers' Federation

E cow is a part of the family life of the nation. No branch of agriculture s so vital to our national well being as that of dairying. The cow furnishes ıe human race a food that cannot by any known practical economy be lied from other sources.

ıere is no substitute for milk. The United States produces 84,000,000,000 ds of milk annually, an amount sufficient to load to capacity a line of two- rucks, touching each other, two and a half times around the world. In e this production is one-sixth that of the entire agricultural production of Jnited States.

these days when every hour is weighted with possibilities and destinies, ng for every ounce of man, woman, and child power, when more than one a half millions of men have already gone from the ten millions of men normally upon the farms of the country, the milk producers are for the first time in the history of the industry beginning to take an inventory of their business.

Plain facts should be plainly stated. There is no class of men in this nation that will respond to every call of patriotic duty more freely and willingly than the farmer. But he does not conceive that duty calls him to furnish to the civilian population of this country the product of his toil at a loss, under the conditions existing.

Until within the last few months the farmer has not known the cost of milk production. The labor of wife, children, and the labor of himself and hired men before and after ordinary working hours have not been counted of value. Now they must be.

Manufacturers, merchants, tradesmen of all kinds, transportation companies, have ascertained costs and when found losing money have either increased prices to cover losses or gone out of business; but we have gone on selling our milk or milk products at the prices made for us by the fellows in between us

Subscription agents for New Zealand—Bray Bros., Agricultural Hall Building, Dunedin, New Zealand. Also—The New Zealand News Co., 150 Wakefield St., Wellington, N. Z.

Subscription agents for Australia—Australasian News Co., 226 Clarence St., Sydney, Aust.

All foreign countries in the Postal Union $2.50 a year; not in the Postal Union $2.56, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of the Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome immoral and quack advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Guernseys Imported to Freeborn County

Forty-seven head of pure-bred Guernsey heifers ranging in age from 13 to 28 months lately were imported direct from the Island of Guernsey and distributed among 20 or more breeders in Freeborn County, Minn. Chas. L. Hill, Wisconsin, was instrumental in obtaining these cattle. W. A. McKerrow of the University Farm assisted Mr. Hill in setting prices on all individuals.

The cattle were drawn by the purchasers under a lottery system, that is, the number of each individual heifer was placed in a sealed envelope and the party ordering heifers drew the number of envelopes to correspond with the number of heifers ordered and paid for the individuals drawn at the appraised value. The price ranged from $180 to $375, and struck an average of $246 per head. Considering the age, breeding, and quality, those present considered the lot exceptionally good for the price and everybody seemed well satisfied with their purchase. The total sales amounted to $11,595. This lot of heifers is going to mean much to the breed in Freeborn County and, with reasonably good luck, the direct benefit of the importation will be noticed within 4 or 5 years. The breeders purchasing these cattle have every reason to consider themselves fortunate in getting a lot of heifers safely across seas at this time, for had they not gotten them it is doubtful if they could get another lot for some time to come.

Minnesota. N. J. WHITNEY.

After the war Europe will continue to look to America for help; there will be no crops raised over night.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

Cows—and Folks

If folks were cows, there'd never be
This goin' on a week-end spree.
They would not stay out late at night,
Nor dance 'till dawn wuz gettin' bright.
They would not quarrel, fib, and fuss,
As happens to the likes of us.
No gossip, spreadin' through th' town,
No reaching wildly fer renown.
If folks wuz cows!

If folks wuz cows, they would not eat
Most any kind uv grub they meet
And, with dyspepsia, grunt and growl,
Or raise old indigestion's howl.
Fer cows show wisdom, when it comes
To workin' out these eatin' sums.
They'd stick to homely ways, I guess
And drop this maddened craze fer dress.
If folks wuz cows!

If folks wuz cows, the world would be
A place of cheer and jollity
The thousand little jealous ways
That so much consternation raise
Would not be part of humankind
To stunt and narrow us, and blind
We'd stick to homely paths and fair,
With mother nature takin' care,
If folks wuz cows!

The Hoover Way

"Mr. Hoover figures that we should—and can—lay aside a two-hundred-million-bushel wheat reserve out of our bumper crop. Looks as if there wouldn't be any starvation in this country."

"Yep, and that's no countin' th' thirty-six prime hams I've got in my smoke house and mother's two shelves full of crabapple jelly. Bulgaria sort of figured that she wanted to board with folks that had a good larder."

Ways to Beat the Kaiser

Clear out old stumps and get the woodlot full to brimming.

Let concrete keep all that good manure from wasting.

Stop admiring your neighbor's new cream separator and buy one for yourself.

Learn that cattle raising is as much a science as manufacturing.

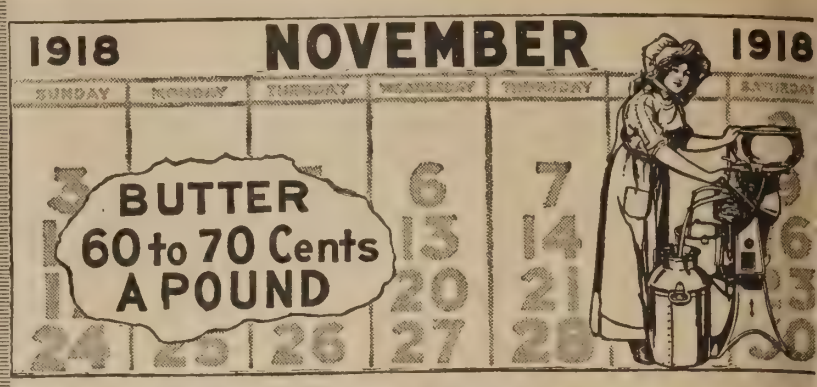
Quit knocking tractors—get up and ride on one.

Come to the conclusion that breeding counts as much in cattle as it does in people.

Times Do Change

Time was, not very long ago,
When, after dark, the farmer slid
Into his bunk, with lights turned low
And, underneath the covers hid.

But now, with lighting systems fine,
And tractors doing work at night,
The farmer needs no sun to shine,
His fields at 1 a. m. are bright.



He does his harvesting as well
When most folks settle down to snooze,
We punch a button—ring a bell,
And drive away the midnight blues.

The city folks must stop their brag,
Concerning incandescents gay.
We of the country do not lag;
The farm is now a "Great White Way."

The Feeling of Regret

The wood has all been cut and stored
The logs burn brightly after dark.
It's snug in here, beside the fire,
And home is land of heart's desire,
With happiness in every spark.
But, oh, I miss the meadow way;
I miss the herd beneath the trees,
I miss the warm wind, and the gay
Zoon-zoon of honey bees.

Mail order catalogs are piled
Upon my knee—the lamp is lit.
It's like a nest, hid from the chill
That whines across that top-most hill,
This toddy helps a little bit.
But, oh I miss the happy herd,
Their browsing down the orchard slope,
The quick call of a singing bird,
A calf upon a rope.

NOW IS THE TIME
to get your new
DE LAVAL
CREAM SEPARATOR

WITH butter prices soaring no cream producer can afford to go another month without a New De Laval Cream Separator.

This is true whether you have no separator, or an inferior or half-worn-out machine, or even an old style De Laval.

In cold weather your waste of butter-fat is relatively greater, either with gravity skimming or a poor separator; and at present prices for cream a De Laval would very soon pay for itself out of its own savings.

There is no cream separator that can compare with the De Laval in clean skimming, capacity, ease of operation, durability, and in freedom from repairs. It's the world's greatest cream saver.

Order your De Laval now and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save it own cost. See the local De Laval agent, or, if you don't know him, write to the nearest De Laval office as below.

The De Laval Separator Co

Hairless Pigs—The Cause and Remedy

E. B. HART AND H. STEENBOCK

RY spring on the farms of Wisonsin as well as in other sections ne "hog belt" there are born a derable number of hairless pigs. tically every county where swine ng is developed and from which ave had reports has had cases of nalady. It occurs in the northern ell as in the southern counties, in the western as well as in the rn part of the state.

some other sections of our coun- notably in Montana, the losses hairless pigs have been enor- . It is estimated that from 100,- to 1,000,000 are lost annually in state alone from this cause, and s become a serious menace to the industry in several states and to of the swine breeders in our state.

irless pigs are of normal weight size, perhaps a little above nor- weight; they are generally ed the full gestation period and four to seven days over time. n absolutely hairless and born they may live a few hours after , but always die sooner or later. are characterized by thick, pulpy s, thick skin, no squeal, and no ty. Where perfectly hairless the

FIG. 1. DEAD HAIRLESS PIGS

e the thick necks indicating a goitrous condition. The r of these pigs had been started on a grain ration—high n and no roughage. On this ration she did not thrive well as changed to one consisting of 15 parts of alfalfa, 25 of 25 of oats, 25 of middlings, and 10 of oil meal, and kept strict confinement. She had produced two litters of hairigs on this ration before being changed to the ration of rts of clover, 33 of corn, and 33 of oats on which she again ced hairless pigs. This trouble was corrected in this same y the use of potassium iodide.

is smooth, shiny, and bald, except few hairs around the eyes and The hoofs of hairless pigs are walled and undeveloped. In the litter there may be variations pigs with full haired coats and vigor to pigs with scanty-haired and little vitality. Those with hair may live if given special tion and care.

gs in this condition are more likely to be born from gilts than from old sows. They are more likely to be born in the spring than in the fall.

Goiter is the Cause

The cause of this malady in both sow and young pig is goiter, an enlarged, improperly working thyroid gland. The thyroid gland, at the center and base of the throat, in its enlarged condition accounts for the thick necks of the little pigs. The sow is also suffering from an enlarged thyroid, but this cannot be so readily observed due to the large, fat, fleshy neck. The goiter in the sow does not seriously affect her health and it does not affect her use for meat, but unless corrected it does interfere with her breeding functions. The thyroid gland of a normal new-born pig is about the size of a pea, while that of a hairless pig is the size of a hickory nut. The gland in a normal sow varies in size, but usually is not larger than a walnut, while in a sow producing hairless pigs it is the size of a man's fist.

Studies of goiter in the human race have shown that when the thyroid gland is removed or its function interfered with, as in goiter or in cancer of the thyroid, the hair and nails cease to develop and the skin of the face and neck becomes thick and pulpy. These conditions correspond very closely with those found in hairless pigs.

The immediate cause of goiter in the human race is not clearly established by medical science, but a cure for the simple form has been found in the use of iodine. It is surprising how widely prevalent goiter really is. It is estimated that 85 per cent of the dogs on the streets of Chicago show more or less enlargement of the thyroid; and goiter or "big neck" is being recognized more frequently in calves, lambs, and colts. In the states of Oregon, Washington, and Montana considerable losses by big neck in colts, lambs, and calves have been reported and cases among lambs have been reported in our own state. At one time the sheep raising industry of Michigan was in danger because of goiter in lambs. Before the discovery of salt deposits around the Great Lakes its future seemed hopeless, but with the development of the salt industry and the use of salt by sheep growers goiter rapidly decreased. The salt contained appreciable quantities of iodine. At present the refined rock salts coming from Michigan, as well as from other parts of the United States, do not contain enough iodine to make their use a guarantee of goiter prevention.

FIG. 3. ANOTHER CORRECTION WITH POTASSIUM IODIDE

The same sow as shown in Fig 2 and on the same ration, but to which was added 10 grams of potassium iodide to each 100 lbs. of feed. All the young were born alive and in normal condition.

Use of Iodine Prevents Hairless Condition

The fact that hairless pigs are the product of a mother suffering from goiter suggested the possibility of curing and controlling this malady with iodine. The thyroid gland forms a chemical substance containing iodine which it circulates through the blood stream. This compound is of the greatest importance to the proper development of an animal. When conditions arise requiring more of this compound, and the iodine supply in the food is not increased, the gland enlarges to let more blood pass through it in a given time. It is, therefore, either a failure to absorb the iodine from the feed or a failure of the thyroid gland to absorb the iodine that is in the blood that causes goiter.

The thyroid gland of the hairless pig contains no iodine; a normal thyroid in its dried state contains about .2 per cent of iodine. The iodine supply in our feeding materials is comparatively low and this is true for all feeding materials. However, in most instances there is enough iodine present in our feeds when it is properly assimilated; but under certain conditions of life, the exact analysis of which is not possible in the present state of our knowledge, our farm animals are unable to absorb sufficient amounts of iodine.

How to Use Iodine

We have successfully corrected the hairless pig trouble by giving the sow during her entire gestation period 10 grams (approximately ⅓ of an ounce) of potassium iodide per 100 pounds of feed. This material can be procured from almost any drug store. It should be powdered to a meal as fine as flour, and then mixed with 100 pounds of feed.

There is no way, so far as we know, of telling beforehand whether or not a sow has goiter. But where hairless pigs have occurred on the farm it would be good insurance against their reoccurrence to use potassium iodide. At the present prices for this chemical a sow can be carried through the entire gestation period for about 26 cents. Special quack remedies should be avoided; nothing but iodine will do the work and the products of vendors of special drugs should be avoided. This malady is not abortion, but is due to the poor working of the thyroid gland.

Tests of this treatment at the Montana Experiment Station have shown that about half of the amount of potassium iodide we have used, when fed for 60 days, will prevent hairless pig production. We have not as yet had an opportunity to try the smaller dose, but would recommend that from 5 to 10 grams of potassium iodide (⅛ to 1-6 of an ounce) per 100 pounds of feed be used. Do not use more as it would be unnecessary and a waste of money. It had better be fed the entire gestation period, or at least the last 75 days of gestation, until further experiments have decided whether a shorter period of use would be equally efficient.

Variations in the Malady

This malady is subject to the greatest variations. Four sows in the same pen, fed the same ration and cared for in identically the same way, may give the following results: Two will come through with sound, normal litters; the third will give a mixed litter, that is, some with a good hair coat and some with scanty hair coat, or absolutely hairless; the fourth will give all hairless pigs. We believe these results are probably due to constitutional differences in the animals, inherent factors which always display themselves with any group of animals. A ration that is near the border line of deficiency in iodine and at the same time is slightly out of balance in some other respect may well affect some individuals more than others.

(Continued on page 526)

FIG. 2. A MIXED LITTER OF HAIRED AND HAIRLESS PIGS

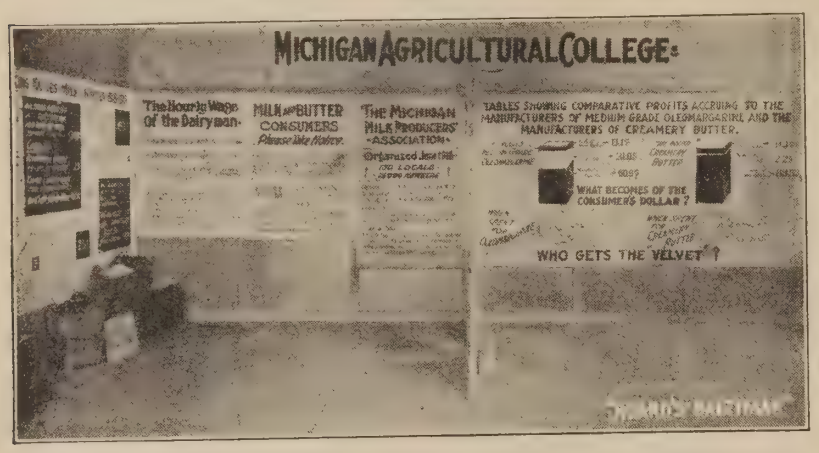
A sow may produce a litter in which there are both haired and hairless pigs. The hairless ones are dead, while those with hair will show life and may be raised. This sow grew up on a ration of 30 parts of corn, 30 of oats, 30 of middlings, 8 of oil meal, and 1 of tankage. She was under strictly confined conditions, but appeared normal in every other respect, excepting in reproduction.

FIG. 4. RAISING THE GILT SO AS TO HELP IN THE PREVENTION OF HAIRLESS PIGS

We believe that hairless pig production is often the result of improper feeding of young sows, such as giving them too high protein feeds and too little roughage in the ration. This sow was reared on a ration of 75 parts of corn and 25 of alfalfa. While the sows may grow at a somewhat slower rate than normal, yet the litters have always been haired and strong where sows have been reared on rations containing 15 to 25 per cent of roughage.

THE COST OF PRODUCING MILK

THERE were several exhibits at the National Dairy Show this year that sought to drive home to producer and consumer alike the cost of milk production and the necessity of adequate prices for milk if the supply of this essential product is to be maintained in sufficient quantity. Owing to the various conditions under which the surveys were made and the basis of the resulting computations, the figures are not directly comparable. However, they are of interest and we therefore give a summary of the figures quoted, while the accompanying illustrations show the method of their presentation.



The Indiana Figures

The U. S. Dairy Division exhibit used the figures secured in an investigation in Porter County, Indiana, made in co-operation with the Purdue College of Agriculture. It covers the records of several hundred cows located in some twenty-five or more herds. Table I gives the average yearly amounts of feed and labor, from which those interested may deduce the costs by applying current prices to the various items.

Table II—The Cost of Keeping a Cow a Year as Disclosed by the Michigan Survey

Charges	
Home grown grains, 560 lbs. at $50 per ton	$ 14.00
Commercial concentrates, 1,014 lbs. at $58 per ton	29.41
Hay, 2,338 lbs. at $25 per ton	29.23
Other dry roughage, 1,019 lbs. at $10 per ton	5.09
Silage, 7,056 lbs. at $7 per ton	24.70
Other succulent feed, 340 lbs. at $7 per ton	1.19
Bedding, 823 lbs. at $7 per ton	2.88
Pasture	7.63
Man labor, 141.4 hrs. at 30c	42.42
Horse labor, 7.2 hrs. at 15c	1.08
Hauling milk, 6,706 lbs. at 25c per cwt.	16.77
Taxes, int., ins., and dep. on cattle ($110 at 12%)	13.20
Taxes, int., ins., and dep. on buildings ($115 at 10%)	11.58
Interest and depreciation on equipment ($12.09 at 18.6%)	2.25
Veterinary service and medicines	.68
Losses due to death	2.34
Miscellaneous costs	2.60
Managerial ability, omitted items, and risks (add 10%)	20.70
Total yearly gross cost	$227.75
Manure credit, 7.43 tons at $2	14.86
Net yearly cost for cows producing 6,706 lbs.*	$212.89
Net cost per 100 lbs. milk	3.17

*Value of calf at birth offset by cost of sire service.

The Michigan exhibit at the National showed the results of the college investigations into the costs of milk production, the dairy organization of the state, and various other dairy products comparisons and information. At the right in the above illustration is shown the percentages of the consumer's dollar that enter into the costs of production and profits of the manufacturers of oleomargarine and creamery butter. Presented in tabular form these are as follows:

	Oleomargarine	Butter
Cost of manufacture	8.1%	9.3%
Manufacturer's profit	31.0%	2.2%
Manufacturer's cost of raw material	60.9%	88.5%

Table I—An Indiana Year's Cow Cost

Charges	Summer months	Winter months	Entire year
Grain	660 lbs.	1,337 lbs.	1,997 lbs.
Dry roughage (hay, etc.)	897 lbs.	2,421 lbs.	3,318 lbs.
Silage (or other succulents)	2,060 lbs.	5,188 lbs.	7,248 lbs.
Salt	18 lbs.	18 lbs.	36 lbs.
Bedding		720 lbs.	720 lbs.
Pasture crops	$10.36		$10.36
Man labor	75.8 hrs.	89.8 hrs.	165.6 hrs.
Horse labor	7.7 hrs.	9.1 hrs.	16.7 hrs.
Overhead charges*	$13.78	$13.20	$26.98
Credits			
Milk	3,390 lbs.	3,525 lbs.	6,915 lbs.
Calf			1 calf
Manure and bedding saved	0.74 ton	5.57 tons	6.3 tons

*Included in the items for overhead costs are interest, depreciation, taxes, and insurance on the buildings, cattle, and equipment. There is also included the repairs and renewals on cans, pails, strainers, brooms, and all the various and sundry barn and dairy equipment, the purchases of medicines and supplies, and the other expenses such as cost of bull service, veterinary fees, etc.

Michigan Has Report on 2,015 Cows

The yearly cost of keeping a cow for one year was secured by an investigation by the Michigan College of Agriculture extending over a period of three years and covering 121 farms with records for 2,015 cows. These cows averaged 6,706 lbs. milk annually, and with costs figured at present prices the annual cost of keeping a cow for a year is as shown in Table II, and the cost of producing 100 lbs. of milk during the seven winter months is shown in Table III.

The Pearson or Illinois Formula

The annual herd cost of producing 100 lbs. of milk (the so-called "Pearson Formula") was secured by the Dairy Department of the Illinois College of Agriculture from the records of approximately 1,000 cows in the milk district directly tributary to Chicago. It is as follows: home grown grain, 20 lbs.; purchased grain, 24 lbs.; hay, 50 lbs.; silage, 188 lbs.; other roughage, 39 lbs.; and man labor, 2.42 hrs.

Table III—The Cost of 100 Lbs. of Milk During the Seven Winter Months as Shown by the Michigan Survey is as Follows:

29.2 lbs. grain at $55 per ton	$ .80
46.6 lbs. hay at $25 per ton	.58
21.1 lbs. other dry roughage at $10 per ton	.11
149.1 lbs. silage at $7 per ton	.52
17.6 lbs. bedding at $7 per ton	.06
2.36 hrs. man labor at 30c	.71
Hauling milk	.25
Taxes and other items	.80
Total gross cost	$3.83
Credit 230 lbs. recoverable manure	.23
	$3.60

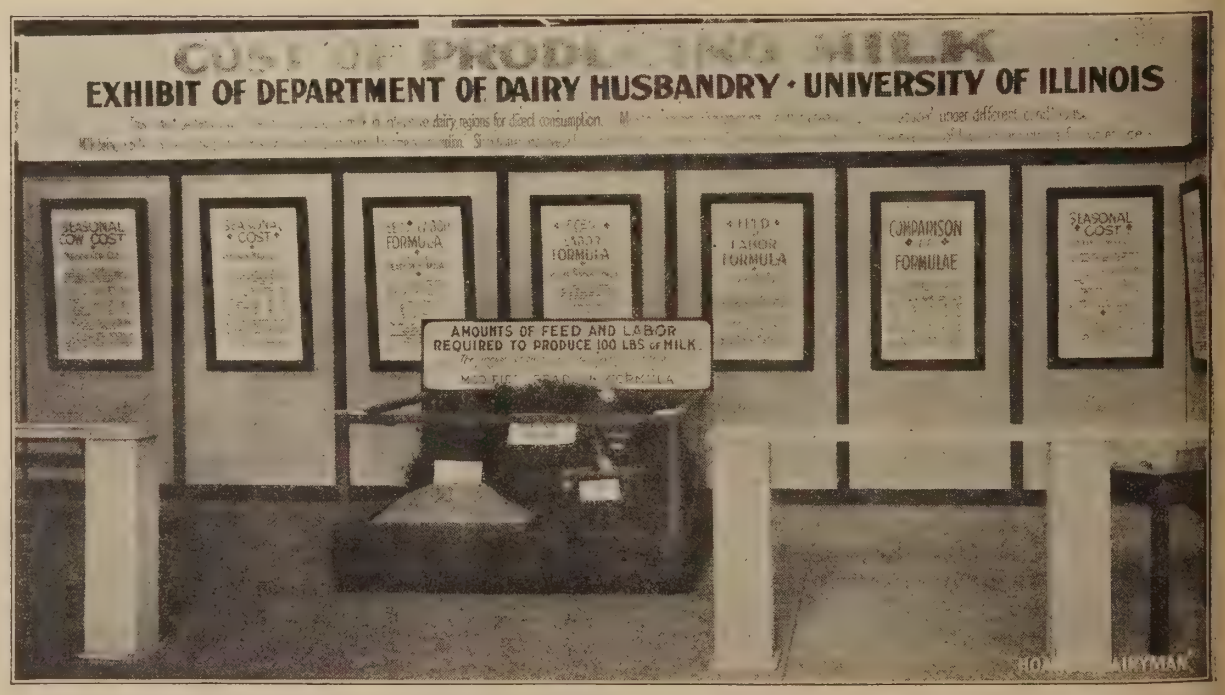
The other charges for horse labor, interest, building, equipment, and miscellaneous expenses, it is estimated are approximately equal to the returns other than milk, such as calves, manure, increase in stock, and miscellaneous returns. The figures given in this formula apply only to the production of milk for direct consumption and to those regions similar to the market milk producing centers near Chicago. They will not hold good for farmers producing market milk under different conditions and it would be especially fallacious to apply it where the milk is produced for manufacture into dairy products such as butter or cheese.

The Pearson formula was used in the settlement of the Chicago milk controversy, but in order to reduce the number of calculations and simplify the table, Judge Lamb of the U. S. Food Administration has used the following amounts of feed and labor as representing the cost of producing 100 lbs. of milk: home grown grains, 20 lbs.; purchased grain, 24 lbs.; hay, 110 lbs.; and labor, 3 hrs. This is known as the "Modified Pearson Formula", the amount of silage and roughage being expressed in terms of additional hours of labor and pounds of hay.

The amounts of feed and labor in these Pearson formulae are the averages for an entire year, and if applied directly would tend to bring the bulk of production in those summer months when costs are least. Since milk is consumed in approximately equal quantities during the different months of the year, the price of milk should vary from month to month t induce production in high cost month and thus secure a constant suppl without periods of large surpluses fo lowing periods of large shortages. T meet this condition Professor Pearso figured out the Chicago market flu tuations in price, or rather their d viations from the average price a shown in Table IV:

Table IV—Percentage Deviation by Months Chicago Milk Prices

January	119.0	July	8
February	114.3	August	9
March	106.5	September	9
April	94.2	October	10
May	73.2	November	11
June	70.6	December	12



By applying the percentages show in Table IV to the previous tables t prices to be paid for any particul month can be secured; i. e, if the tot average cost for the month of Nove ber should be $3.00 according to t Modified Pearson formula, then mu tiplying this by the percentage dev ation from the average for the mon of November (118.3 per cent) wou give the price to be paid that mont or $3.55 per 100 lbs.

Comparison of Formulae

For the purpose of comparison w give in Table V several formul showing the cost of producing 100 lb of milk, the Indiana and Michig formulae being deduced by the e tors from the figures for yearly cos given previously. The Warren form la was developed by Professor Warr from his investigations in New Yo State, while the Hoover formula based on the investigations of t Milk Committee of the U. S. Food A ministration involving six states, 4 farms, and 9,761 cows.

The Pearson formulae are p sumed to account for the total co including all items not shown, as ta es, depreciation, supplies, etc., whi are offset by the value of manure a calf and otherwise taken up, and that is needed is to compute the c of feed and labor at current prices order to get the total average cost p hundred pounds milk. After applyi the prevailing prices to the Warr formula there are still certain ite unaccounted for, and it is necessa to add 25% to the first total to get t entire cost of 100 lbs. of milk. T is called the "corrective facto which in the Hoover formula is set the investigators at 23.7%. Accordi

(Continued on page 518)

This exhibit of charts showing the development of the Pearson formula for determining the cost of milk production was rendered doubly valuable by the distribution of a bulletin containing a reproduction of each chart. The case in the center illustrated the 44 lbs. grain, 110 lbs. hay, and 3 hours labor required to produce 100 lbs. milk according to the modified Pearson formula.

A RED CROSS DAIRY FARM

E of the finest farm properties in England, Sarisbury Court, near thampton, is now being worked by American Red Cross as a means giving recreation to wounded erican soldiers and also to sup- fresh vegetables and milk to the pital in the Manor House and hboring hospitals. The Red Cross chased this wonderful Manor a its 186 acres of farm land, dows, and woods outright, trans- ned the Manor into a hospital with merable concrete wards, erected a hospital of seventy large double- ed, window tents, and turned the re institution over to the Ameri- army medical authorities as Base pital No. 40.

lthough the hospital has been ed over to the United States gov- nent, the Red Cross will continue perate the estate, which it is be- ed will supply the hospital with y products, ham and bacon, poul- and eggs, and fruits and veg- les. To manage the farm the Red ss has been fortunate in securing voluntary services of Frank Sher- Peer. Mr. Peer operates a fine n in New York and another in Jersey. He also operates a farm on the Island of Guernsey in the English Channel, which is a show place and model for that thrifty home of the Guernsey breed. On his Guernsey farm he makes an acre of ground produce four tons of hay, and twenty-five acres support seventy-five head of cattle.

The estate is to have a mixed herd of at least fifty Guernseys and Holsteins. To establish this herd, Mr. Peer had to induce the authorities to make an exception of a law prohibiting the shipment of cows from Guernsey, and since this permission was granted Mr. Peer and several of the other Guernsey farmers sent several of the Island's prize winners to become a part of the Red Cross herd.

In addition there will be one hundred pigs, one thousand chickens, and many ducks. The dairy, the poultry, and the kitchen garden will be in charge of an English lady, Mrs. Ismay Fownes, sister of General Sir Archibald Murray of Mesopotamia fame, who volunteered to handle this end of the activity for the Red Cross. Her experience in practical farm work was obtained on her estates in the various parts of England.

The gardens of Sarisbury Court are famous all through this region. Here the patients, American soldiers, who are assigned to this hospital, may wander over ten acres of beautiful fields devoted to orchards of fruits, vegetables, and flowers, and have access to many hot-houses where the choicest fruits and vegetables as well as rare flowers are grown under glass. All the products of these gardens are to be used in supplying delicacies for the patients and flowers for beautifying and brightening up the many awards.—(Courtesy American Red Cross.)

At Sarisbury, England, the American Red Cross is building the largest American hospital in Great Britain. The hospital farm produces its own bacon. The pigs and cattle are under the care of an American farmer, F. S. Peer of New York.—(Courtesy of American Red Cross.)

Agricultural Reconstruction After the War

WALTER L. HOUSER, President Wisconsin Live Stock Breeders' Association.

E war will come to an end. It will e finished when our enemies are en out of allied territory and have down their arms in surrender. side of that goal there will be her halting, quitting, nor com- nise. Whatever the cost or sacri- the aims of our nation and our s must be maintained. Hereafter nany cannot tote a gun, that h is certain.

here will be radical economic ges as the war nears a conclu- and during the period of recon- ction—a period necessarily of iderable length. Already we feel can plainly see the signs of ge that is inevitable when the is over. Peace talk finds reaction mmediate slump in the price of , sheep, corn, and other agricul- l products. Things so abnormal, so cally unbalanced, tively speaking, signs of a break he war invites and es certain radical ks in present eco- ic conditions. In r words, we are up on stilts and er or later many of vill take a tumble be mussed up un- we are wise and are a soft place to upon.

is none too early the farmer and man to begin to are for the change. he can do this and e same time patri- lly conform to the rnment program. in doing so he will st himself to the ram of reconstruc- and become a potent factor in rebuilding the world.

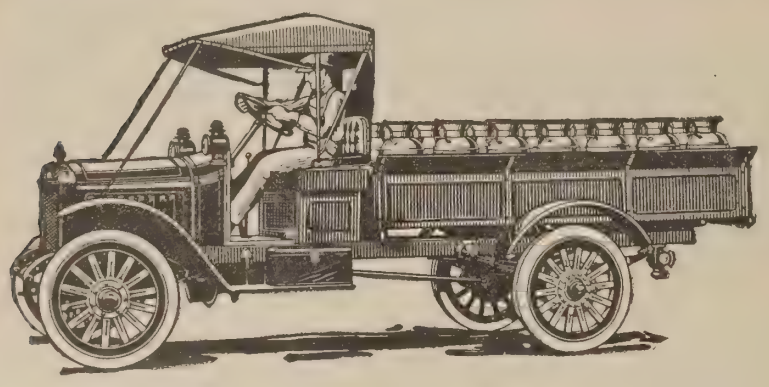
The American farmer ought to open his eyes and look ahead a little. Just now his business is prosperous unless he is profligate. If conditions were to remain as they now are, he need not worry. But they will not remain so. He must beat the change or get his fingers pinched when the door slams. He must readjust his affairs when the readjusting is good. How to do it?

Well, first this is a good time to pay debts. Money is cheap. When the change comes money will be dear and it will be more difficult to pay debts. If a farmer owes $1,000 he can pay it with 500 bushels of $2 wheat, or 5,000 pounds of $20 hogs, or thirty tons of $33 hay. If he waits until after the war to pay it, it will cost him at least 1,000 bushels of wheat; 10,000 pounds of hogs; 75 or 100 tons of hay, etc. Either pay debts with big war incomes or buy liberty bonds which will be a safe investment and available offset to debts at any time. If not in debt, buy bonds, thus supporting the government and investing your surplus where it will be safe and available, when after the war conditions will make investments in other lines attractive at normal prices. Get along with the Ford or old car for a time and after the war you will be able to buy a new one at practically half the price now asked. In other words, this is the time to *save*. You will be justified in going to extremes to save in preparation for the transition.

Farmers can well afford to carefully prune their live stock at the present time. They will be justified in reducing their flocks and herds to a paying basis—that is, selling for food all unprofitable animals, having care, of course, to keep sufficient live stock on the farm to conserve fertility and maintain a balanced agriculture. But now is the time to sell scrubs, unprofitable stock, and to begin the program of rebuilding our flocks and herds upon the foundation of profitable animal husbandry. The farmer who is ready to conform to after war conditions—to engage in the sharp competition in his line of business that is inevitable; who has his farm stocked with high class, profitable live stock, fit to meet the demands of the countries that have been depopulated in live stock by the war,—and it must be good stuff that will meet this demand—will be the wise, foresighted farmer-business man. You can not meet this competition and supply this profitable market with scrub live stock. You will be ground into the dust if you try it.

Now is the time for conservative, careful planning and preparation for the sure enough change that is coming.

I believe it is wise to warn farmers not to expect too much of the after the war demand from European countries for our live stock. At least it is wise to advise them that they cannot expect to sell their scrub stock to them. They will insist

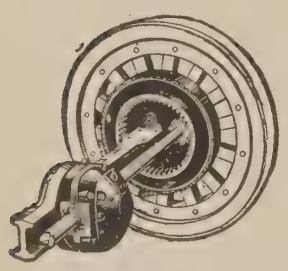


(Continued on Page 527)

A STRIKING COST OF PRODUCTION EXHIBIT

That "a cow has four stomachs and it takes a lot of feed to satisfy them" was strikingly brought home, at the National, in the exhibit based on the Indiana investigations heretofore reported in Hoard's Dairyman. To the left is the large milk bottle representing the average milk production (6,915 lbs.) of the cows on which costs of production were kept. Next comes the hay stack containing 2,632 lbs. hay, and this stack gave a better idea of the quantity of hay a cow requires than mere figures ever tell. Then, we see the grain sacks required to hold the 1,152 lbs. of purchased grain and the piles of ear corn representing the 843 lbs. of home grown feed, making a total of nearly a ton of grain to produce 6,915 lbs. of milk. There are shocks of corn stover to represent the 686 lbs. of other dry feed consumed, bales of straw showing the 720 lbs. of bedding required, a silo that is presumed to hold the 7,248 lbs. silage consumed, and finally a small plot of green grass to indicate the $10.86 cost of pasture. To add to the interest and to indicate the labor costs, we have the cow and her calf. In so far as was practical, the exhibit was an exact reproduction of the feed consumed in a year and it was easy to grasp the lesson it sought to convey.

REPUBLIC
Internal Gear Drive
MOTOR TRUCKS
Built by the Largest Manufacturers of Motor Trucks in the World



Republic Trucks on the Dairy-Farm

Republic Trucks are particularly adapted to the special requirements of dairy-farm work.

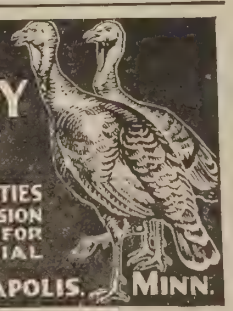
Republic Trucks have an Internal Gear Drive with I-beam load-carrying axle of solid forged steel. The driving mechanism is entirely separate from this axle and has nothing to do but drive the truck.

The power is applied near the rim of the wheel, gaining greater leverage for hard pulls. And this Internal Gear Drive permits 45% greater load clearance, a big advantage for country roads.

There is less unsprung weight which means important savings in tires, gasoline and all upkeep expenses. Every part is simple in construction, easy to get at and easy to adjust when necessary. More than 1300 Republic Service Stations, distributed all over the United States, stand back of Republic Trucks to see that they give continuously satisfactory service.

The Internal Gear Drive gets extra power for pulling over bad roads and up hard grades by applying power near the rim of the wheel.

Dependable—Economical Trouble Proof



Republics are easy riding and easy to drive. And they have proved so dependable and given such superior service to owners that it has been necessary to build more than twice as many of them as any other motor truck in order to supply the demand.

There are seven different Republic Models —¾ ton to 5 ton. One of these models will exactly fill your requirements.

See the nearest Republic dealer and send for latest booklet.

When Writing to Advertisers, Mention Hoard's Dairyman

Maryland State Fair

The Maryland State Fair at Timonium was held this year under entirely new management and special effort was made to attract a big showing in both dairy cattle and other live stock and, in fact, all agricultural products.

Seven hundred dollars in prizes were offered in each of the four recognized dairy breeds and, in addition, the National Holstein-Friesian Association added 20 per cent for their breed.

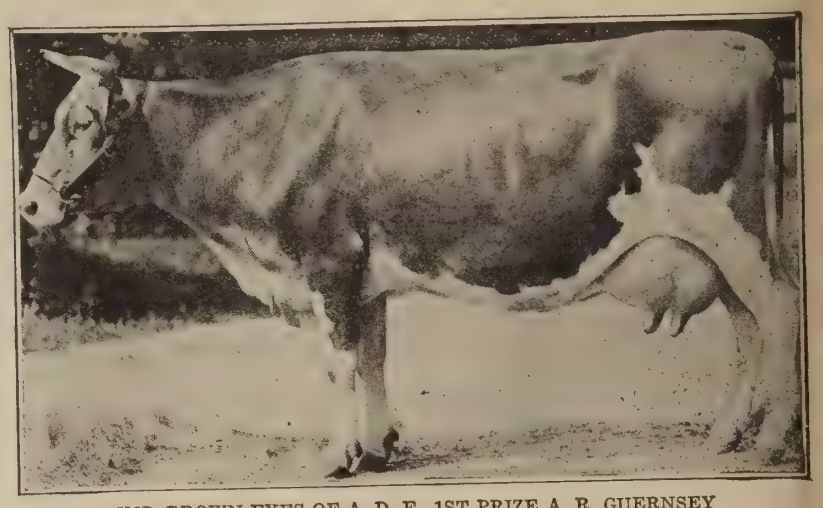
Mr. E. J. Gill of New Jersey judged Guernseys; Dr. Deubler of Penshurst Farm, Ayrshires and Jerseys; and Dr. George Carpenter of Pennsylvania the Holsteins.

Holsteins

There were four exhibitors of Holsteins with a total of 41 head; John W. Dennis, Maryland, 17 head; Davis Brothers, Pennsylvania, 20 head; I. E. Emerson, Maryland, 3 head; and Frank Lupo, Maryland, 1 head.

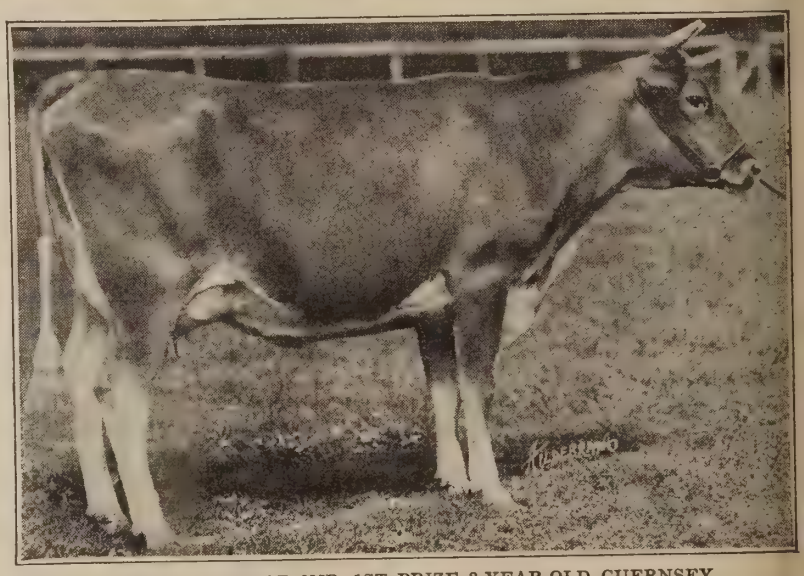
These men brought out a splendid exhibit and competition was keen in all classes, the single entry of Loveton Farms in the aged bull class was good enough to win the championship, while Brooklandwood Farms with three youngsters were 1st and 3rd in the yearling bull class. Essex Dairy Farm carried off the majority of the prizes in the female classes.

Below is the detail:



Bull 3 years or over—1, Lupo on King Clarinda Bacon DeKol; 2, Dennis on Arcady Segis Hengerveld Wayne; 3, Davis Bros. on L. H. C. Paul Alcartra. Bull 2 years—1, Davis Bros. on King Pietertje Buttercup 2nd. Yearlings—1, Emerson on Brooklandwood King Pontiac; 2, Dennis on King Pontiac Netherland Pershing; 3, Emerson on Brooklandwood King Segis Alcartra. Bull calf—1, Davis on an unregistered calf; 2, Dennis on S. X. Pontiac Segis Lass.

Cow 4 years—1, 2, and 3, Dennis on Inka Rose DeKol Hartog, Essex Hilda Ina DeKol Lass, and ———. Cow 3 years—1 and 3, Dennis on Essex Segis Hendrick and Matilda Pauline Korndyke 2nd; 2, Davis on Zama's Burke. Cow 2 years—1 and 2, Dennis on Carlisle Lady Artis and Carlisle Bertha DeKol; 3, Davis on Johanna Colantha Aaggie Queen. Yearling—1 and 3, Dennis on S. X. Pontiac Alcartra Lass and S. X. Inka DeKol; 2, Davis on Johanna DeKol Netherland Queen. Senior heifer calf—1 and 2, Dennis on S. X. Segis Hengerveld Maid and S. X. Segis Hendrick; 3, Davis. Junior heifer calf—1 and 3, Davis; 2, Dennis.



Exhibitor's Herd—1, Dennis; 2, Davis Bros. Breeder's Young Herd—1, Dennis; 2 Davis Bros.; Calf Herd—1, Dennis; 2 and 3 Davis Bros. Get of Sire—1, Dennis; 2 and 3 Davis Bros. Produce of Dam—1 and 2, Dennis; 3, Davis Bros. A. R. Cow—1, Dennis on Carlisle Lady Artis. Champion Bull—Lupo on King Clarinda Bacon DeKol. Champion Cow—Dennis on Inka Rose DeKol Hartog.

Guernseys

Nine Maryland Guernsey breeders brought out a total of 47 head. Louis McL. Merryman, 23; J. E. Griffith, 9; J. Walton Bolgiano, 4; Leonard Ensor, 4; Miss Kate McLane, 2; D. K. Este Fisher, 2; C. E. Mc

IMP. BROWN EYES OF A. D. F., 1ST PRIZE A. R. GUERNSEY COW AT THE MARYLAND STATE FAIR
She has a year's record of 13,908.6 lbs. milk containing 836.48 lbs. fat.
OWNED BY L. McL. MERRYMAN, MARYLAND

CLARE OF GERAR 2ND, 1ST PRIZE 2-YEAR-OLD GUERNSEY COW AT THE MARYLAND STATE FAIR
She has a record of 8,086.7 lbs. milk containing 350 lbs. fat in 236 days, Class G, and is owned by L. McL. Merryman, Maryland.

Lane, 1; I. E. Emerson, 1; and W. Carroll, 1.

Bull 3 years—1, Merryman on Ru Patent King; 2, Merryman on Uncle Bull 2 years—1, Griffith on Jarden Prince. Bull 1 year—1, Emerson on B landwood Warrior; 2, Merryman on Anchor; 3, Griffith on Charmante's Ultra Bull calf—1, 2, and 3, Merryman on C Patient King, Rutila's Patient King 3rd, Rutila's Patient King 4th.

Cow 4 years and over—1 and 3, Merr on Justina of Locust Lane and Moll Gerar; 2, Griffith on Edith of Pleasant Cow 3 years—1, Carroll on Milford An Lassie of Donemore; 2, Merryman on seeker's Jehanna of Anna Dean Farm. C years—1, Merryman on Clare of Gerar 2, Griffith on Eleanor of Fox Hall; 3, McLane on Prue of Bohemia 2nd. C year—1 and 3, Merryman on Gerar Ju and Jessie of Locust Lane; 2, Ensor on of Dunmore. Senior heifer calf—1, G on Daughter of Anton's May King; 2 s Merryman on Gerar Loulie and Gerar Queen. Junior heifer calf—1, 2, and 3, M man on Gerar Adventures, Clare of Gera and Gerar Rosie.

Exhibitor's Herd—1 and 2, Merryma Griffith. Breeder's Young Herd—1, Merr Calf Herd—1 and 3, Merryman; 2, G

Get of Sire—1, Merryman. Produce of Dam—1, 2, and 3, Merryman. Four cows in milk—1, Merryman. A. R. Cow—1 Merryman on Imp. Brown Eyes of A. D. F.

Champion Bull—Emerson on Brooklandwood Warrior.

Champion Cow—Merryman on Justina of Locust Lane.

Jerseys

Two Maryland breeders, C. E. Rieman and Wm. Carroll, showed Jerseys with winnings as follows:

Aged bull, 1st prize Golden Oxford Owl, who won 1st prize and championship 1912, 1913, 1914, and 1918; 1912 also won gold medal shown as yearling winning 1st over four senior bulls—a grandson of Stockwell & Golden Fernshad. Aged cows, 1st prize, Combination Jessie, imported January, 1917. Won 1st St. John's Parish prize, Island of Jersey, daughter of Register Merit cow, granddaughter and great granddaughter of winner of certificates of merit, public butter test on the Island of Jersey. Bull 2 years, 1st prize, Secret Owl, son of Golden Oxford Owl and Viola's Golden Secret, daughter of Viola's Golden Jolly, who sold twice at public auction, 1st for $12,000 and second at $13,000. Bull under 1 year, 1st prize, Me Emment Owl, son of Golden Oxford Owl.

Cow 3 years, 1st prize, Maid Mabel Oxford, granddaughter of Oxford You'll Do, a great granddaughter of Gamboge Knight, Golden Maid's Prince Emment 2nd and Golden Fern Lad. 2nd prize, Rose and Or, a daughter of a son of Emment 2nd out of Golden Fern Lad out of a daughter of Oxford Lad. 3rd Carroll on Daisy O'Kim of Kenilworth. Cows 1 year, Maid Daisy Oxford, full sister of Maid Mabel Oxford above. Junior heifer calf, Mystic Viola, tracing twice to the celebrated Lady Viola, and to the great bull "The Owl" and Emment 2nd. Cow 2 years, Marie de Rozel d Or, a handsome fawn, granddaughter of Emnent 2nd and Stockwell, in addition to the above individual prizes—won first.

Exhibitor's herd, Produce of Dam, with Maid Mabel Oxford and Maid Daisy Oxford, full sisters, daughters of Mabel d Or. Combinations Versie, Marie de Rozel d Or, Maid Mabel Oxford, and Maid Daisy Oxford.

Ayrshires

Dr. Dickinson Gorsuch of Maryland was the only exhibitor of Ayrshires.

Maryland. LOUIS MCL. MERRYMAN.

After the War is Over

It doesn't take long to turn an army into a mob. Put two million men into camps with nothing to do, no fighting and mighty little drill—if any—and you'll have a mob spirit before you know it. This is one reason that Dr. John R. Mott, director-general of the United War Work Campaign, emphasizes the importance of continuing, long after the war ends, the service given by the Young Men's Christian Association, the Young Women's Christian Association, the Knights of Columbus, the Jewish Welfare Board, the War Camp Community Service, the American Library Association, and the Salvation Army, in America and overseas. Doctor Mott knows that the American army cannot be demobilized in a week. He knows it will take months to bring our soldiers home. He knows that most of the force will be in France or Belgium or Germany a long time after formal declaration of peace. The boys will need care and entertainment for many months after the Kaiser has ceased to worry them. That's why every American man, woman, and child should do something, give something to the United War Work Campaign fund of $170,500,000 in the week of November 11-18. Seven great organizations are combined in that campaign upon the president's suggestion. They do the work the government cannot do for the boys in the war zone. Give all you can when the man comes 'round. Don't let it be said that farmers wouldn't give to this fund. I've been denying that kind of talk for more than a year. Help me to make good on it. Of course no one who knows anything about American farmers can prove a word of this criticism, but it rankles just the same. Ordinarily I do not believe in repeating gossip. I am doing it here because I want my farmer friends to know just what has been said. I want the rural division to show up big and powerful in the November drive.—CHARLES DILLON, Director Rural Publicity, U. S. War Work Campaign.

"AND A WOMAN DID"

Miss Hawn traveled from Wisconsin to Columbus, Ohio, to tell the visitors at the National Dairy Show that women not only are able and competent to act as testers in cow testing associations, but that they are and have for some time been doing the work in a most satisfactory manner. The women are the reserve army, and without their assistance many a cow testing association would have to discontinue. Miss Hawn's story and demonstration convinced many a doubting Thomas and encouraged women to take up this work. After talking with her, men and women felt that what has been done can be done again. The woman tester has been tried out and those who know say she is quite as satisfactory as men, and her work in many respects is superior.

It Means Milk

"We are losing every year 300,000 children under five years old, a third of whom die from preventable causes." Thus speaks Mrs. Ira Couch Wood, chairman of the Child Welfare Committee for the Illinois Council of Defense. Continuing Mrs. Wood says:

"One of three things is the matter—either they are not getting enough food or they are not getting the right kind of food, or they have physical defects which could be remedied to make for proper growth. We have a very small percentage of people who cannot secure enough food. It is not a matter of poverty but of ignorance. Parents need education and re-education to bring home the fact that there are standards in child development and that the proper food in the majority of cases will bring the child up to the standard.

"Our children should be one hundred per cent perfect in this great free country where we have boasted that every man has his chance. Of course, some will be handicapped by heredity, but if our children are fed properly, we should be the foremost nation in the world. It means milk and butterfat and plenty of green vegetables, very little meat, and you get a sound diet for children."

In the past eight years South Dakota has nearly trebled the value of her manufacture of butter and cheese. In 1910 it was $8,185,890, and in 1918 it had increased to $23,454,825. Her annual butter production is 35 million pounds, an increase of 75 per cent over that produced eight years ago.

Beware of Cheaply-Built Separators

—They Cost More in the End

So-called "bargain machines" are usually made from poor, cheap material by unskilled workmen. They do not skim clean. They cannot stand hard, continuous service. Broken parts mean long delays and expense for repairs—and while the separator is standing idle, butterfat is being wasted.

With saving of fats so essential and butter values so great, no farmer should take chances with a wasteful, unreliable separator.

When you buy a Sharples, you are sure of its service. The great Sharples institution is behind it—as well as a nearby dealer. Sharples Suction-feed Separator is the only one that *skims clean at any speed.* No discs or blades in the bowl.

Victrola

The messenger of cheer

In homes throughout the land where the boys are absent in the service of Uncle Sam, the Victrola with its corps of noted artists is cheering the home-folks with its superb music and entertainment.

In the camps where our soldiers and sailors are gathered, the Victrola is also in active service doing its musical duty. Its cheering music and wholesome entertainment afford a welcome diversion to pleasantly while away the spare moments.

The Victrola is the messenger of cheer whose inspiring music is so necessary in these stirring war times. During the coming holiday season, it will find its way into many additional homes. And many new Victrolas and Victor Records will be among the Christmas gifts to bring joy to the hearts of the soldier and sailor boys in camp.

Victors and Victrolas $12 to $950.

There are Victor dealers everywhere and they will gladly demonstrate the Victrola and play any music you wish to hear. Write to us today for the handsome illustrated Victor catalogs and name and address of nearest Victor dealer.

Victor Talking Machine Co., Camden, N. J.

Important Notice. Victor Records and Victor Machines are scientifically coordinated and synchronized in the processes of manufacture, and their use, one with the other, is absolutely essential to a perfect reproduction.

New Victor Records demonstrated at all dealers on the 1st of each month

"Victrola" is the Registered Trademark of the Victor Talking Machine Company designating the products of this Company only.

To insure Victor quality, always look for the famous trademark, "His Master's Voice." It is on all products of the Victor Talking Machine Company.

YOU KNOW! If you're an experienced grocer **you know** that the housewife demands butter with the rich golden shade—**you know** that **DANDELION BRAND**—the old reliable butter color—gives just the right shade.

BUT DO YOUR DAIRY CUSTOMERS KNOW IT?

Sell them **DANDELION BRAND BUTTER COLOR.** It means higher butter prices for both of you.

We guarantee that Dandelion Brand Butter Color is PURELY VEGETABLE and that it meets the FULL REQUIREMENTS OF ALL FOOD LAWS,—STATE AND NATIONAL.

Association Notes

St. Joseph Co., Michigan—The co-operative feed stores and creameries are doing much to help solve the problems of the farmers of this county. Most of the farmers have one or more silos and are putting up more silage and of a better quality than for several years. Most of the members have their own pure-bred sires and will use nothing else. A large percentage are drying up their cows as fall freshening is the method followed. In September market milk sold for $3.30 per 100 lbs., the creamery paying 50 to 62 cents per pound fat. Milk retails for 12 cents per quart and butter 60 cents per pound. Alfalfa costs $40 a ton; oats, $45; bran, $38; oil meal, $60; cottonseed meal, $50; silage, $5 to $9. Pasture is very poor. A great number fed silage or hay all summer and maintained a fair flow of milk. The tester says: "The milking machine, the corn binder and husker, and the silo are the farmer's guns that will throw shells against the Huns with such force that nothing can resist them."

Claremont, New Hampshire:—One fine pure-bred bull has been bought. Farmers are buying nearly all their grain through the Farmers' Exchange. Milk sold for $3.33 per hundred in September, the average test required being 3.5%. The creamery paid 60 cents per pound for fat. Milk sells for 12 cents per quart and butter 55 cents per pound.

Rutherford Co., Tennessee:—J. Butler saved $50 in one month on his feed bill; W. R. Clark, $11; E. Carlson, $21; and R. L. Smith, $15. Three new silos were erected. B. B. Taylor purchased a pure-bred bull and Register of Merit work was started on 5 cows owned by Geo. Calhoun. Three unprofitable cows were sold. Milk sold for 30 cents per gallon in September. The creamery paid 56 cents per pound fat and butter sold for 40 cents a pound. September feed prices were about the same as for August, with exception of a decrease of $1.50 on pasture bills.

Whitman—Spokane, Washington:—In September market milk sold for $3.55 per hundred, the average test required being 3.6% and for each point above 5 cents were paid. Milk retails for 15 cents per quart and butter 60 cents per pound. Corn sells for $80 per ton; bran, $35; oats, $65; barley, $60; oil meal, $100; cocoanut meal, $70; alfalfa, $30; corn silage, $10; oat and pea silage, $10.

Lawsville, Pennsylvania:—In September 3% milk sold for $2.88 per hundred and 4 cents for each point above. The creamery paid 81 cents per pound for fat the last half of September. Prices for roughage in this association are: Silage without ears, $6.50 per ton; silage with ears, $8; corn stover, $12; clover and timothy hay, mixed, $25.

Sheboygan Falls, Wisconsin:—Four poor producers were sold during the month. Some members have been buying their winter's supply feed at the Equity to which all association members belong. In September market milk sold for $2.15 $2.30 per cwt. and retailed for cents per quart. Butter sold for to 67 cents per pound and cheese f 37c. Oats sold for $2.25 per cwt barley, $.98 per bushel; oil meal, $ to $63 per ton.

Greenville, Wisconsin—One registered cow was bought to replace unprofitable one that was sold. O member sold a registered sire to a other breeder after he had no mo use for him, thereby saving a prov bull. The condensery paid $.71¼ p pound fat and the creamery paid $. in September. Butter sold for 60c. pound and cheese for 37 cents. Fee cost as follows: Gluten, $56 per to bran, $34; oats, $50; barley, $5 corn silage, $5; corn stover, $7.

Pioneer, Idaho:—This report co ers the first 9 months of the thi year's work and compares favorabl with the corresponding periods for t two previous years. As heretofo some members have failed to profit the greatest extent because of failu to grasp the facts about different co in their herds as proven by the mon ly records left by the tester. The m progressive of the members—a n jority—have "doped out" the reas for this difference and the future is ing to see better herds as a result. is the consensus of opinion that weakest thing about fully nine-ten of the members is that their standa of herd sires is too low. If more them realized that an increase in production of their herds of from to 50 per cent could be realized just one generation they wo raise their standard. "A bull is o half of the herd", but how many as much for the bull as they do for rest of the herd? Some pay only o half as much for their bull as they for a single individual in their h The proper selection of the herd and proper rearing of the you heifer calves is of equal importanc the individual records of cows in n and the greatest improvement can be made until this fact is appreci

It is interesting to note, howe the achievements of our best da men who have made a large 50 per cow butterfat list each mo Over 40 cows were sold during th 9 months for beef and about 40 be cows purchased in their stead incl ing a great many registered fem from high producing ancestry. On average of about 1 pure-bred bull month has been purchased makin bought during the 9 months.

While feed has been high an great many have given this as an

Cut Out *ALL* Cream Waste

Get $20 More Butter-Fat Profit Per Cow

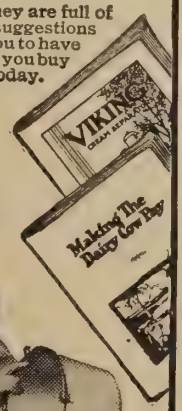
STOP losing cream through out-of-date and inefficient separation methods. Take a lesson from the Swedish farmers. Their farming conditions have compelled them to put out *all* cream waste. Their demand for *perfect* cream separation has produced the most efficient cream separator in the world—the VIKING. Get ALL the cream—ALL the profit that it is possible to make from each cow. Use a

VIKING CREAM SEPARATOR

Lower in Price—Greater in Capacity

You save money when you buy a VIKING. You add to your butter-fat profits every day you use a VIKING. Expert's tests prove that the VIKING actually has 100 pounds of milk greater capacity per hour than many separators costing more than the VIKING. World-wide demand for VIKINGS has built up the largest separator factory in existence: 180,000 VIKINGS are sold every year.

More Than ONE MILLION in Use



It is the simplest separator made today. Easiest running. Operation starts **at once** with the turn of the handle. Whole bowl can be cleansed in 3 minutes. Nothing but the highest grade steel enters its construction.

It is Guaranteed For a Lifetime

Everywhere it is used it proves itself a profit maker for the farmer. It will pay you to investigate. Drop in on your local dealer and see the VIKING in operation.

Get These 2 Books FREE

Send for these books. They are full of practical, profit-making suggestions for the farmer. We want you to have the profit by them whether you buy VIKING or not. Write today.

cuse for selling out, the only real excuse should be the inability to secure competent labor, as a comparison of cost of production shows that last year's average returns for $1.00 expended for feed was $2.60 while this year it is $2.86. Last year's cost of producing 1 lb. fat was 18 cents while this year it is only 21 cents with butterfat selling for 52 cents. Last year it was only 47 cents.

R. M. SHARP, Tester.

Sweet Cream Rule Explained

By a new rule specifying that cream sold for direct consumption shall contain no more than 20 per cent butterfat, the U. S. Food Administration seeks to limit the luxury use of this important fatty nutrient. The 20 per cent maximum restricts the sale of so called "double" and "whipped cream" and other kinds prepared chiefly for special purposes not permissible in the face of present shortages of fats abroad. The rule applies directly to licensed dealers and through them restricts ultimate consumers, including housewives, hotels, restaurants, and institutions.

To prevent misunderstanding of this regulation by dairymen the Food Administration states very clearly that it does not affect or in any way apply to cream used for buttermaking, ice cream making, or other manufacturing purposes. In fact, a richer cream—one testing between 30 and 40 per cent butterfat—is more desirable for most manufacturing operations, especially buttermaking, where a high butterfat content means a minimum of labor and a generally lower cost of operation.

The full text of the cream rule which is now in effect follows:

"No licensee shall sell sweet cream which contains more than twenty per cent butterfat to consumers or retail distributors of cream, provided that this rule shall not prevent the licensee from selling sweet cream containing more than twenty per cent butterfat to manufacturers for manufacturing purposes."

Amongst other benefits that should result from this rule is a somewhat greater supply of market milk for larger cities. The luxury cream trade is most highly developed in large centers of population and a considerable quantity of milk must be skimmed to secure the extra richness now prohibited by the need to conserve fats.—U. S. FOOD ADMINISTRATION.

A New Zealand Milk Man

A perfect milkman appeared before the Second Military Service Board of New Zealand at Wellington last month. The Wellington Times reports that he said his milk went straight from the cows to the consumer's belly. He sold his milk only to families where there were babies crying for pure milk. He had numerous testimonials from grown-ups as to the purity of his milk. His coolers did not leak, and he sold his milk a penny cheaper per pint than other milkmen. Letters produced to the board showed that the curate of the district spoke of appellant's "glorious milk". A communication from a milk inspector testified to the fact that it was waste of time to examine appellant's milk. Another letter spoke of the grave concern of the mothers of the district if their milkmen had to go into camp. Finally there was a letter from a proud mother stating that after giving her baby the wonderful milk of this wonderful milkman the infant put on 10 lbs. in less than three months. The board did not hesitate a moment but granted the appeal.—Leader (Australia.)

Five dollars will provide a lot of good things for your boy at the front.

Rubber Footwear in "No Man's Land"

"Over there" our boys are fighting knee-deep in mud. Keeping fit under these conditions is difficult. Rubber footwear has therefore become almost indispensable for men in the trenches.

To keep America's troops supplied with rubber footwear is all-important. Men who are fighting must have first choice. This limits home supplies but saves valuable lives overseas.

Our outdoor-working customers, we are sure, will cheerfully meet this situation. We regret our inability to take care of every demand for "U. S. Protected" rubber footwear. We thank our patrons and look forward to serving them again. Until then, look for the "U. S. Seal" on every pair and remember the name.

When writing advertisers please mention Hoard's Dairyman.

"Yep! I like milking, now I've got a light to see by!"

"WITH that big globe of Carbide Light shining down on everything it seems as though I could almost find a needle in the hay. When Winter comes on and the days are short it makes a powerful sight of difference, now we've got a Colt Lighting Plant. Seems like living!

"I got another light fixed outside the barn. When we come in at night from visiting, I can unhitch, as you might say, in broad daylight.

"The Lord was good to us last year. The crops paid fine. The one thing we'd been longing for was modern, up-to-date lighting. So we got a Colt Plant. Now we're happy. Yep! *real* happy.

"Why a Colt Plant?

"Where is there a plant can touch it? Look at the light! Beats the others all to pieces! Makes them look like lightning bugs!

"Listen! Once a month I drop a little of this carbide — it's like crushed stone—into the generator that stands in the corner of the cellar—and add a little water. For the rest of the time we don't even know the Colt Plant is in the house.

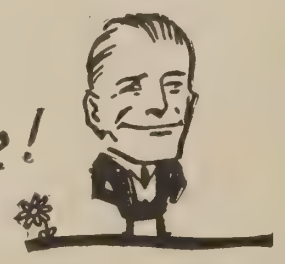
"Couple of years ago, when I was down the river, I saw miners going down into the coal mines, each with a little carbide lamp on the front of his cap. They've got the whole town lighted up with Carbide Light down there.

"Thinks I, if it's good enough for them, it's good enough for me! Later, I found a number of our neighbors have them. Judge Foster has a Colt Plant.

"Here comes the wife to tell me supper's ready. She cooks it on the Colt Gas Stove, you know—'bout ten or fifteen minutes over the same gas that lights the house and barns. So long."

Carbide Lighting COLT and Cooking Plant

TRADE MARK



There is no other system so economical as the Colt Carbide Lighting and Cooking Plant. There is nothing to get out of order, nothing to wear out. It is practically indestructible. Silently, automatically, it gives the most powerful, soft white light known to scientists. After 18 years of competition it still outsells all rival lighting systems for country homes.

Write today for the names and addresses of neighbors, who are enthusiastic in its praise. Over 250,000 families light their homes and do their cooking in this way.

J. B. COLT COMPANY, 42nd Street Building, New York

902

That good Gravely taste!

Real Gravely is the common-sense chew for men. It is economical. A man gets his tobacco satisfaction out of a smaller chew and fewer of them. The good Gravely taste lasts a long while. Two or three small squares of Real Gravely stays with you longer than a big hunk of ordinary plug. Each piece is packed in a pouch. These are the plain facts about Gravely Plug Tobacco.

• • • •

It goes further—that's why you can get the good taste of this class of tobacco without extra cost.

PEYTON BRAND

The Cost of Producing Milk

(Continued from page 512)

to our computations the corrective factor for the Michigan formula would be 45.8%, but owing to the lack of complete data we are unable to give it for the Indiana formula.

To illustrate the comparative approximate cost of producing 100 lbs. of milk according to the various formulae, the following prices may be assumed: Grain, $50 per ton; hay, $20 per ton; silage, $6 per ton; labor, 25 cents per hour. Applying these arbitrary prices and using the corrective factors previously described we procure the results shown in Table VI.

Table V—Comparison of Several Surveys Showing the Items Entering Into the Cost of Produ 100 Lbs. Milk

Factors in Formula	Pearson	Modified Pearson	Warren	Hoover	Indiana	Mich
Grain, lbs.	44.00	44.00	33.80	33.50	28.9	28.
Hay, lbs.	50.00	110.00	43.30	45.30	38.1	34.
Silage, lbs.	188.00		100.50	102.60	104.8	110.
Roughage, lbs.	39.00		10.80	11.50	9.9	15.
Labor, hrs.	2.42	3.00	3.02	2.88	2.4	2.
Corrective factor	0	0	25%	23.7%		45.

Table VI—Cost of Producing 100 Lbs. Milk According to Certain Fixed Prices as Applie Different Formulae

Dairymen Must Co-operate

(Continued from first page.)

and the consumers.

Farmers must organize or be lost in the onward movement. Milk producers have understood this and have federated their organizations, and their federation has united with the greater federation of all other farm organizations that is here convening.

The National Milk Producers' Federation now covers the greater portion of the dairying territory of the nation from the Pacific to the Atlantic. Not yet does it take in all producers, but does incorporate most of the larger organizations.

It is growing rapidly, notwithstanding the obstacles placed in its way during the first few months of its life. Dead and sleeping laws are dug up and used by prosecuting officials in some of our cities to indict our officers. All kinds of propaganda were used against us. The government did not understand our business, our trials, our profits, and our losses any better than we did ourselves; and why should it?

We were fought by great interests and we are yet; we were preyed upon by adroit and well financed concerns wearing the garb of innocence, but sapping our life with low prices perfectly agreed upon; by some feed companies selling us ground weed seed, oat hulls, and dirt at great prices, in fact we were the easiest marks in this great republic.

We have gained much in the time since we organized, and we have only started.

1. We have gained the respect of an honest press, because we have convinced them that our cause is just. I consider this the most important gain of all.

II. We have secured the co-operation of the general government in our cause. The Food Administration and The Department of Agriculture have rendered valuable service to the producers and as valuable to the consumers.

(a) A natural prejudice against the industry created by the interests (oleo dealers and manufacturers) has been changed to one of friendship.

(b) Investigations have been conducted into the cost of producing milk, and many profiteering, unfair agents of the middlemen in the dairy business have found other fields for their activities than in these departments.

(c) The government, both food and agricultural, have through scientific investigation ascertained the absolute necessity of milk and milk products to the perpetuity of the race, and have so advised the people.

(d) They have taught the people the cheapness of milk and milk products as a food as compared with other foods even at the advanced costs.

III. We have secured the respect and we trust the continued friendship of state and city officials over the country. Indictments and prosecutions have all been dismissed or practically abandoned; public sentiment has been changed. The justice of our cause has been established, for no other industry has so completely offered itself to the country as ours. We have dedicated it for the war at cost of production plus such reasonable profit as the government may be willing to fix.

We have shown the powers that milk products for food value, for lesser shipping space, in cost to the government and consumers, was many times more economical than canned meat, and that the demand was as great as the consumers were to be consulted.

We are denied equal opportunity in the feeding of the army and navy. Our products are no part of the army rations, while the great packing industry and others are given attention that is only explained by telling that the buying boards do not call for our products.

If this be true, then why is it that when the people of the allied nations are without them, and paying inordinate prices for them as food?

We are satisfied so long as patriotism demands our acquiescence, but not when profiteering interests are at the base.

We do not ask the government for protection, for its active support or insurance against loss, except as the government destroys our law of supply and demand either by regulation in the home market or denies us the foreign market.

We have been promised that better prices would prevail generally, and are assured by the government that the cow population of Europe is greatly decimated that milk and milk products are practically unknown, that our industry must replenish the allied nations after the war, and that we have held on to our cows, though knowing that we are doing so at a positive loss.

But there are at least two remedies. One of them is to sell the cows and get for them the best meat prices that have ever prevailed. This seems a pity, with the world suffering for milk and milk products. It would

reat sacrifice to the farmer who
a at least two billions of dollars
n sted in his preparation for pro-
du ng milk. If he quits it will take
re s to return.

ne other course is through or-
ga zation and co-operation.

his government is spending tens
of billions of dollars for war pur-
po s. Untold billions are being spent
fo munitions, for cantonments, for
cl ing, for manufacturers of all
ki s and no dollar of it all, except
h dollars paid to the farmer, is used
n he purchase of commodities at
es than cost.

hen condensed milk, butter, and
h se, evaporated milk, etc., is pur-
h ed for war or civilian purposes
y he government, care is taken to
a the manufacturer cost plus a
pr it, but no attention is paid to the
co of the farmers' milk from which
h product is made.

the preservation of the dairy in-
du ry is one of the vital necessities
fr the war and now, would it not
be vell for the government to insist
h the manufacturer who sells to
h government should certify that
h product he offers has been made
fr a milk at a price to the farmer
co ring cost plus a reasonable
pr it?

hese manufacturers are licensees
f he government. The law provides:
Whenever the President shall find
a any storage charge, commission,
pr it, or practice of any licensee is
un ust, or unreasonable, or discrim-
in ory or unfair, etc.", the license
m be revoked, penalties inflicted, or
th President may order the course of
be ing to correct the same.

his, of course, related to the Food
ad inistration and other appointive
of ers of the President.

would seem to the layman that
ad le power is given to protect the
in producers from the oppressive
ac ics that are being used against
in by the conspirators from whom
th government is buying.

ntil every remedy is exhausted,
fr l every petition has failed, we
sh l hope for such relief as will per-
in the farmer to continue in the
da y business.

he consuming public would not be
di ult to convince about the justice
of ur cause. The American people
ar fair when given the facts, but the
ma ipulators of our business and of
ou markets are unfortunately the
pr ers and manufacturers. They
ar presumed to know the ropes and
ca use them.

Herbert Hoover, Food Adminis-
tor, could personally give the time
to he details of our cause, he would
ex t the wrongs under which we suf-
fe at once, but he cannot. He is hon-
es and never hesitates to hew to the
li when he sees it.

is duties are so multitudinous, so
ld-wide, that others must be sub-
sti ted for detail work and for exec-
ti e action.

ut there is hard work ahead and
we are going to do it.

We will go over the top in every
pa l and patriotic duty, we will sup-
po the government and follow our
le ers, we will cheerfully aid our
sa iers and sailors and give our sons
fo he cause for which they are fight-
in but we will not remain silent
wh le the greed of inordinate prof-
its rs rifle our pockets and destroy
ou business.

ur sure relief is in organization
an if necessary in legislation. We do
no believe that the country will re-
ma n deaf to our appeals.

he above are extracts from the
re ess given at the Farmers' Con-
en nce in Washington, August 27th
an 9th.

When the boys are home and back
in civilian garb we can cease work-
ing for them. But not before.

Good Roads Will Triple Truck Value to Nation!

Trucks—more trucks—hundreds of thousands of motor trucks are working day and night to help the nation in this great struggle.

Every train that moves—every ship that sails—every factory that works depends on trucks for hurry-up haulage. 585,000 trucks will be in service this year—capacity to handle 5,585,000 tons daily.

An invaluable service—almost incomputable—yet seemingly impossible, when you consider the horrible roads over which these trucks are many times compelled to travel.

No one can help but realize the terrible economic waste! The inefficiency! The awful handicap of this weak link in America's haulage system. The value of motor trucks to the nation—to American Industry—could easily be doubled, probably tripled, if good highways were provided.

Federal made a test. A truck, heavily loaded, going over various types of roads. The results are startling! Here are the mileages recorded:

Dirt Roads - - 4.6 miles per hour
Gravel Roads - 9.5 miles per hour
Concrete Roads - 16.4 miles per hour

The answer must be better highways! And they should be built immediately! You and I must be interested; therefore every citizen should lend his voice to the cause, now!

Hoover Telegraphs Cooper

The United States Food Administration has made public the following telegram to Mr. R. D. Cooper, President of the Dairymen's League of New York City:

"I understand from various parts of the country, that while negotiations are proceeding in New York with a view to arriving at a fair voluntary arrangement of milk prices between producers, in which your association is represented, together with consumers and distributors, you have been telegraphing over the country asking milk producers' associations to make demands in Congress for congressional investigation of Food Administration's efforts to secure agreements in milk disputes.

"I wish to state plainly that the Food Administration is not intimated by such tactics, and I do not believe they are supported by the responsible dairymen of the country, whose proper interests we have at all times endeavored to protect.

"We have not the slightest objection to any investigation, but it is desirable for you and the people of New York to consider that while every district in the country east of the Mississippi has been able to arrive at agreements satisfactory to all sides, your association is demanding more than any other section of the country, even after consideration of every fundamental difference in your economic situation.

"The patient, painstaking negotiations in New York have extended for weeks under the guidance of Messrs. John Mitchell and Arthur Williams, assisted by Doctor King and Judge Lamb, all fair minded men of no interest but justice to both sides. The two latter have assisted in settling satisfactorily disputes all over the country, and I have the fullest confidence in the knowledge of all these gentlemen of intrinsic conditions in the industry, and their desire to maintain milk production and give a square deal to the consumer.

"The price proposed by them for the New York district of $3.81 for three per cent milk is based upon a profitable return to the producer, as evidenced by all other agreements in the country and differences in your local situation, and takes full account of increased wages and other expenses. With some sacrifice by the distributors, it will result in sixteen cent milk to the New York consumer, the highest price ever paid for milk.

"Your demands, which result in seventeen cent milk, I consider are based upon an attempt to profiteer, and will react upon the dairymen by decreased consumption. This decrease in consumption will come from the poor children of the city to whom milk is vital.

"The Food Administration has no authority or wish to impose prices upon producers. We entered these negotiations at the instance of all interests, lending ourselves as mediators, to arrive at collective bargains, with the Administration giving effect by agreement to such fair conclusions as may be adopted by all interests.

"If, in failure to secure agreement among parties as in this case, you are not prepared to accept our impartial views, and play the game fairly, we can do no more and will leave the matter in the hands of the citizens and authorities of New York to take such measures as they may see fit.—HERBERT HOOVER."

[EDITORS' NOTE:—Mr. Hoover speaks of $3.81 as the price proposed by representatives of the Food Administration. We take it, this must be the November price, as the price for October was set at $3.57].

New York Butter Market

NEW YORK CITY, Oct. 29—Houses are literally full of under-grade butter; buyers are extremely critical; demand is limited; and handlers are very nervous. As those conditions have been prevalent for better than ten days the conditions of the market cannot be said to be very satisfactory. There has been, as usual even under the most trying of conditions, a good demand for butter of high quality, which again supports the old contention that the creamery that makes quality its watchword need have no worry about a constant and desirable outlet for its butter. At this time jobbers and retailers are especially hard to satisfy. If they can not find extras or better at the source of their regular supply they do not hesitate to pass from one store to another until their desires have been satisfied. As a consequence there is a great accumulation of under-grade butter and a corresponding scarcity of higher scoring butter. Creameries which have been shipping butter that would score extras or better seem to be having considerable trouble with their quality at present. For some unknown reason a high percentage of butter being received has a strong oily flavor which is very unpopular among butter handlers. At this time with buyers extremely critical that feature stands out more markedly than it would otherwise.

Even with conditions as they have been for several days the market quotations have had a tendency to rise. That is due entirely to the fact that there is a strong demand for high quality butter. It is very noticeable, however, that under-grade butter has not risen in price in proportion to the advance of high quality butter. There is an extreme effort being exerted on the part of buyers to purchase under-grades at an extremely low price which has a tendency to hurt their sale. Handlers will not sell much of their holdings of low scoring butter for the prices that are being offered at present.

Bigger Money In Butter

"BUTTER prices are to soar," say the men who know.

"ARMY and Navy needs must be supplied!"

"PRICES are likely to reach levels never before heard of in the history of the trade!"

BUTTER PRICES ARE TO SOAR
Consumer Need Not Fear Cold Storage Supply; Lucky to Get Any.
The butter consumer need not fear storage butter being forced upon him this winter. In fact, he will be fortunate if he is able to buy butter at all. Army and navy needs must be supplied and most of the butter in cold storage has already been shipped or is in the process of being transported to camps and cantonments in the United States or across the ocean. As a result the domestic consumer will have to rely chiefly on the fresh receipts.
The winter months are those of lean production and prices are likely to reach levels never before heard of in the history of the trade. An ineffectual effort was made to have the food administration fix a maximum price.
TRIED FREE; TIME: 1 HOUR

Clipping from Chicago Daily News, Oct. 22

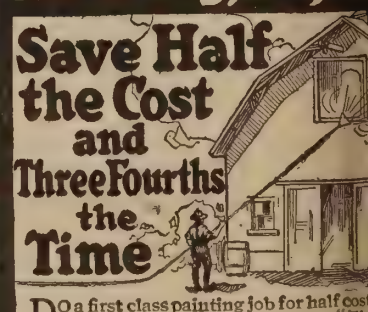
MAN ALIVE, there's the chance of a lifetime, this winter, to turn your cream into money by turning it into butter. If you're not making every pound of butter you can—if you're not making it the easiest, quickest, most profitable way—if you're not using a modern, labor-saving, money-making butter machine—get in shape right now to take advantage of this unusual opportunity!

Now's the Time to "Cash In" On This!

The MINNETONNA BUTTER MACHINE is built to meet the present demand for quick, profitable butter making—to overcome labor shortage.

It churns, rinses, salts and works the butter in 25 minutes—does it better than it can be done by hand—does it while you go about your other work.

It turns every ounce of butterfat into rich, fine flavored creamery butter that brings creamery butter prices, or better.



The illustrated Minnetonna Book is packed with money-making butter secrets. Have you seen it? If not, don't wait until someone else has "cornered" the MINNETONNA butter market in your community—*write for it now!*

No obligation, no expense—but it will put you in touch with the livest money making opportunity the country has ever known.

A postcard will bring it—postpaid.

ons on extras advanced one-fourth one-half cent, establishing a price 57¼@57½c. On Thursday the iotation became established at 57½c hich held on Friday and Saturday. n Monday there was an advance of half cent and there is no further ange today which leaves the estab-shed quotations as follows: Extras 92 score), 58c; higher scoring than tras (93 score or higher) 58½@ c; firsts (88 to 91 score), 56@ ½c; and seconds (83 to 87 score), @55½c. Unsalted butter is mov-g very slowly and is selling for nat it will bring.

W. B. LIVERANCE.

iscussion of Milk Situation in Greater New York

Mr. John D. Miller, representing e Dairymen's League, has prepared brief on the milk price controversy New York which has been forward-to Herbert Hoover, U. S. Food Ad-inistrator. The representatives and embers of the Dairymen's League el that the U. S. Food Administra-on has not comprehended fully the eatment which has been accorded to em and they have set forth in pam-let form the reasons why the milk oducers for the city of New York e dissatisfied. The following is a eral extract from the brief.

"Declared Purpose of the Food Ad-inistration: It was orally stated by r. Hoover to representatives of this ganization, in October, 1917, that e purpose of the Food Administra-on was that the producer should ve cost of production plus a fair ofit.

"In the light of these declarations rmit us to review subsequent ents.

"Summer Prices to Producers: For e months of April to September, in-sive, the prices to dairy farmers re were below those paid in ad-ning districts; below the average tion-wide prices, and far below sts of production.

"These low prices to farmers were t voluntary on their part but were e result of market conditions, one which was the obstructed foreign rkets. In other words, the law of pply and demand determined these ces, which without exaggeration y be termed cruelly low.

"During these months no depart-nt of the government interfered protect the farmers, or to give m their costs of production, much s a profit. Apparently the Food lministration sat by, content if only ices to consumers were low. This s a wide departure from your as-rances of costs plus a profit.

"Autumn Prices: Market condi-ns have now materially changed. e law of supply and demand now stifies and requires a price that will e the farmers their costs plus a ofit. When they attempted, how-er, to adjust their prices in accord-ce with such market condition, the od Administration immediately in-fered to prevent the operation of e law of supply and demand, and quired the farmer to sell for a price ver than that determined by such v.

"In other words, the effect of the in-ence of the Food Administration on the entire industry during the ar has been that the law of supply d demand is permitted to operate en it results in a low price to farm-, but it is not permitted to operate en it results in a high price to m. Such a course will destroy any lustry. This again is a departure from your announced policy of costs plus a profit.

"October Price: To maintain any industry, price and confidence are both important. After repeated conferences with the dealers and with your representative, no price for October was agreed upon. Your representative neither adjusted the differences nor determined the price. The time was growing short. The farmers were compelled to act. They found that the cost of production of October milk was $3.65 per hundred pounds. The dealers, several hundred in number, agreed to accept this production cost as the price, and contracts were made accordingly.

"After all this was done, and after the farmers had accordingly contracted for their October feeds and labor, your representative, over our solemn protest, insisted upon the abrogation of all these contracts and named a lower price, closing his eyes to the danger and confusion that would result and has resulted in so doing.

"Consumers are more able to pay a fair price than are farmers to sell at less than cost. Milk at 17c a quart is the cheapest form of animal fat food on the market, and if consumers cannot afford to buy it, it follows that they are unable to buy such food in any form. This means that the farmers are asked to reduce their prices not as a business proposition, but as a charitable one. We do not believe that the people of the city want charity. They want, and should have justice. Convince them that the prices charged them are reasonable based on costs of production and distribution, and they will pay such prices.

"Effect on Consumption of Giving Farmers Their Costs: It is suggested that to give farmers their present costs will decrease consumption and thereby react on producers. We answer that this is not necessarily so. Much depends on the Food Administration. If such Administration announces to the public in clear and concise terms that the prices are reasonable, based on costs of production and distribution, consumption will very soon return to normal. We repeat that the consuming public is willing to pay a fair price if they know it to be fair.

"We recognize that the producers and consumers are bound together by economic laws which they did not make, and which they cannot repeal. It is to the interest of the consumers to pay the farmer a fair price, thus insuring adequate production.

"Comparative Prices: It is fair to state that it costs as much to produce milk in this territory as throughout the country. A comparison of prices received by the farmers in this territory with nation-wide prices is of interest. In the following table we state in the left hand column the average nation-wide prices paid to producers for milk at wholesale, and in the right-hand column the price received by producers here for the month, stated, to-wit:

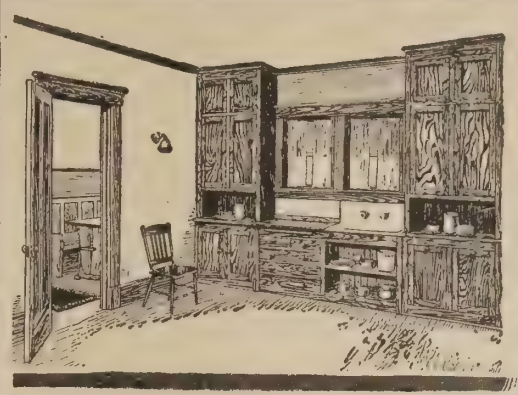
	Cents per quart	Cents per quart
April	5.5	6
May	7.5	5.6
June	7.5	4.5
July	7.4	5.4
August	7.7	6.4

"The nation-wide prices are taken from the Government Crop Report. Can the industry here survive if this disparity in price continues?"

Regulations to Save Tin

Canners of evaporated and condensed milk, at a conference on September 27, with officials of the Food Administration, agreed to lend their influence in the conservation of tin plate. Evaporated and condensed milk, which heretofore has been put up in four sizes, namely, 6, 12, 14 and 15 ounce cans, will, when the supply of tin plate now on hand is exhausted, market their product in only 14 and 15 ounce cans.

The elimination of the 6 and 12 ounce cans, commonly termed "baby" and "family" sizes by the trade, will effect a saving of 10 per cent in the amount of tin plate used in this industry, exclusive of that which is needed by the army and navy.



Those in attendance at the conference were: L. R. Hardinbergh, Carnation Products Milk Company; Walter Page, Libby, McNeill, and Libby; Charles S. Parson, Borden's Condensed Milk Company; John Harris, Wisconsin Butter and Cheese Company; Taylor Wilson, Indiana Condensed Milk Company; and H. C. Hooks, Hire's Condensed Milk Company.—FOOD ADMINISTRATION.

The U. S. Public Health Service reports that the southern disease, pellagra, is largely, if not entirely, due to a faulty diet. When meat and milk are supplied in adequate quantity there is a practical security against this disease which last year caused 3,700 deaths.

EDITORIAL COMMENT

FEEDING CULL BEANS

We purchased the other day two tons of cull beans from a Michigan firm as an experiment in feeding dairy cows. Beans are rich in protein, and serve well to balance up against ground barley and corn. They are said to be a very profitable feed for young hogs, taking the place to a certain extent of tankage and oil meal. They should be clean, well dried, and cured and ground before being fed. As to the proportion with other feed we will know more after experimenting with them. They are sold for $42 a ton, bags included, to which freight should be added.

SILAGE SETTLING AWAY FROM THE WALL

In the issue of Oct. 18 this question was discussed but the real reason was very lightly touched upon. When silage settles toward the center and away from the wall it is because of a fault in filling. The outside should be constantly kept at least two feet higher than the center. The silage drops mainly in the center unless handled with a flexible distributor at the end of the blow pipe. All silos filled from a carrier drop the silage in the center or nearly so. This makes the center hard. If forked out to the wall and well tread the center as it rises wedges out and holds the outside silage snug to the wall, thus preventing the air from getting in and molding the contents.

Silos should never be kept level when filling. Rather the outside should be high enough to resemble a large saucer. Hoard's Dairyman Farm adopted this rule twenty years ago and has never been troubled with the silage settling away from the wall. In this way we can make good silage of rather uncertain corn because the heat and settling expels the air and the contents hug the wall snugly.

MILK FOR WOUNDED SOLDIERS

The Dairy Division is laying plans with the American Red Cross for the purpose of establishing a 1,000-cow dairy at Bordeaux, France. The principal base hospital is located at Bordeaux and it has a capacity of about 40,000 beds. The Division has been informed that a certain number of men, particularly those who have been gassed, require fresh milk and that the milk supply in Bordeaux is very short and a great many children are suffering for the need of it.

It seems out of the question for the War Department, according to Mr. Rawl, Chief of the Dairy Division, to secure anything like a sufficient amount of milk for the patients who need it. Many patients do not require fresh milk, so milk powder, condensed milk, etc., are fairly satisfactory.

Mr. Rawl informs us that the Red Cross has secured the services of Mr. W. H. Jeffers to go to France as chairman of the committee to organize this 1,000-cow dairy. It is quite possible that some one from the Division will also take part in this undertaking. It is not an easy affair, under existing conditions in France, to operate a large dairy but if the wounded soldiers need the milk, as no doubt they do, the Dairy Division is only too glad to put forth every effort possible to secure it for them. The matter has not been finally decided but it is hoped it will be definitely determined at an early date.

THE COST OF PRODUCING MILK

It would be interesting, if it were practical, to bring together all the milk cost accounting data that has been developed in various sections of the country during the past few years, but the discussion elsewhere in this issue is restricted to what was shown at the National Dairy Show this year. It is to be remembered that the data given are concerned with the average costs of production in various market milk producing sections, and are presented with the purpose of driving home the thought that adequate prices must be paid for milk that the average producer will be induced to continue its production.

At a later date, it will be interesting and instructive to study the data somewhat more thoroughly in order to learn what made the costs of production lower on one farm than another. More intelligent feeding, with a larger use of legume hay and silage, would doubtless be found to be one of the large factors, as would also the breeding and feeding of higher producing cows. Then, too, in all this cost accounting work it must be remembered that, on most dairy farms, the cows and the general farm work are closely interwoven and they work together harmoniously for most economical production. Again, there is the large psychological factor (or economic factor, if one prefers) to be considered, dairy farming offers the man most concerned the opportunity of making the best use of labor and feed that would otherwise be wasted.

For their particular purpose the figures quoted in the discussion referred to are excellent and necessary, but considering the future of the industry they should and must be supplemented with constructive information as to how these costs may be reduced. We have traveled this road for many years and some men have grown weary with the repetition, but the fact remains that any industry must ever seek to adopt the most economical methods of production if it is to succeed in the competition to which it is subjected. In our fight for adequate milk prices, let not the other factors of success be overlooked or neglected.

TIGHTEN UP OUR BELTS

"America must this year send to the armies and the allies 50 per cent more food than last year—three times the normal exports. When the war ends, she must supply with food 180 million people who are facing starvation unless help comes quickly."

These are the opening words of a circular recently issued by the United States Food Administration in its appeal to save food. It is directed primarily at the consumer, but to the producer it is at once a challenge and an assurance. It challenges him to continue his productive efforts, to tighten up his belt, as it were, and dig into the job of making his acres and his live stock produce as much or more than when labor was more plentiful. It is an assurance in that it indicates something of the demand there will be for food after the war is over.

"When the war ends in democracy's triumph," continues the appeal, "new obligations will fall upon us. We shall be called upon to send not less food, but more.

"The allies will by no means produce a new harvest overnight. Eighty millions of men can not be taken out of production for four years without lasting losses of yield. It will be years before their fields recuperate, farms are restored, and herds are restocked.

"But another demand even more insistent will come to us—the cry of the hungering victims of Germany and the war. Every country in Europe has suffered shortage of food, lessened yield, weakened production, most of all the great tracts overrun and pillaged by Germany, tortured and sacked by Germany's partners, wrecked by the Russian madness.

"Their woes are increasing; they are facing now a terrible winter. Many will starve. As yet we can not help them except where the Belgian Relief Commission extends its succor. We can not prevent starvation behind the war barrier or beyond the limits of shipping, where every cubic foot and every second's time is needed in the effort for victory.

"After the war the needs of 180,000,000 hungering people will press on America. We could not choose but help them. As we believe in the kindred of all humanity, America will save food to rescue and restore them."

ACCREDITED HERDS

The Bureau of Animal Industry, co-operating with several state live stock sanitary boards, is attempting to control and eradicate tuberculosis in cattle. About a year ago the United States Live Stock Sanitary Association, representatives of pure-bred cattle breeders' associations, and the United States Bureau of Animal Industry adopted rules which provide a uniform method for securing tuberculosis-free accredited herds. The purpose of this work is to eventually eradicate tuberculosis in cattle by systematic efforts of federal and state authorities co-operating with the cattle breeders' associations and herd owners.

An accredited herd is one that has successfully passed two annual or three semi-annual tuberculin tests applied by regularly employed veterinary inspectors of the Bureau of Animal Industry or of the state where co-operative work is conducted, and its owner has otherwise complied with the regulations governing the work.

The work has been in progress long enough to justify publication of the results. We gather from the pamphlet issued by the Bureau of Animal Industry that a total of 854 dairy herds are on the accredited list, which means they have been found free from tuberculosis for the required length of time. Of the number, 3 are Brown Swiss herds, 157 Guernsey herds, 423 Holstein-Friesian herds, 250 Jersey herds, and 21 Ayrshire herds.

We are highly in favor of this systematic work of eradicating tuberculosis, for we have felt for some time that with promiscuous testing, as it has been done in the past, very little headway was being made in the eradication of bovine tuberculosis.

The rules and regulations as they are laid down by those in charge of this work make it obligatory for those whose herds are being tested to follow systematic rules, which we believe will reduce the chances of a herd contracting tuberculosis to the minimum. So very few people realize that tuberculosis is an insidious disease and that it is easily introduced into a healthy herd. It is not enough for an animal to pass the tuberculin test, but a certain length of time must be required after it has been exposed to tuberculosis germs before it is safe to take into a healthy herd. The rules and regulations promulgated by those interested in the establishment of tuberculosis-free herds provide that no animal shall enter a clean herd until placed in quarantine for a period long enough to establish beyond reasonable doubt that the animal is free from tuberculosis. Further, there is necessity of determining the strength of the tuberculin. Many tuberculous animals have passed as clean because of the low strength of the tuberculin used for testing. Too much care can not be exercised in the application of the tuberculin test or in admitting animals into a clean herd. The rules provided in the establishment of accredited herds assist the breeder in all these essential matters.

DAIRYMEN MUST ORGANIZE

Elsewhere in this issue we publish an extract from an address delivered by Milo D. Campbell in Washington before the Federation of Farmers Organizations. The statements in Mr. Campbell's address show the necessity of farmers organizing for the purpose of protecting their own rights.

For years Hoard's Dairyman has challenged the producers of dairy products to co-operate for the purpose of controlling their own business. We have set forth the best we knew how, every successful co-operative enterprise in the country and pointed out the many advantages which come to the producer when he controls his products until they are ready to be delivered to the consumer. We have not urged that the producer attempt to market his own product in the large cities for we believe the first step which must be taken is to co-operate in the establishment of creameries, cheese factories and such other institutions that will prepare his products for market. When the producer learns how to prepare his product for market, then it will be time enough to take upon himself the duty of marketing his products.

We have little faith in bringing about satisfaction to the producer by the arbitrary fixing of prices. We believe that supply and demand when not interfered with will regulate the prices and that the farmer will govern his production according to the prices which he is paid for his product. If the prices of butter, cheese, and condensed milk are not sufficient to yield him a reasonable profit for his milk, the average producer will quit producing milk and engage in some other farm enterprise. It also seems to us that the prices of butter, cheese and condensed milk will form the basis for determining the prices of market milk. If co-operative enterprises are established by the farmer to manufacture his product into butter, cheese, or condensed milk, it will then be possible to divert his milk into these various products according to the relative profitableness of their several markets. If it is found more profitable to make butter and feed the skimmilk, that will be followed until the prices for market milk will give him larger compensation for his product. At the present time cheese selling for 32c a pound brings a larger return than butter selling at 55c a pound. It must be taken into consideration that the feeding value of whey is not equal to that of skimmilk, but even allowing the difference in favor of skimmilk cheesemaking at 32c a pound is more profitable than buttermaking at 55c a pound.

The solution of the producers' problems in their various forms, as we see it, is through organization and co-operation. We appreciate that the dairy farmer is passing through a rather critical period, but we trust that the experience will teach a valuable lesson and lead the producers to see the necessity of co-operative enterprises.

ould be nothing short of a calamity for the dairy- en at this time to dispose of their good producing ws, for the future holds splendid opportunities r them. Further, the dairyman is not looking en- rely for the dollar. He realizes that he owes an bligation to his country and that it is his patri- ic duty to produce dairy products at this time.

Sheep May Eat Larkspur

Please tell me if sheep are poisoned by eating rkspur.

Denver, Colo. C. R.

Farmers' Bulletin 988 reports that "careful and tended experiments upon the tall and low larks- rs, growing about the Mount Carbou Experiment ation in Colorado, showed conclusively that sheep n graze upon the plants without any harm. Cor- l feeding experiments showed that sheep can eat ry large quantities of larkspur not only without rm but with apparent benefit. The experimental ork at the Greycliff Station in Montana corrob- ated that in Colorado, and there is every reason believe that sheep are not injured by feeding on larkspur."

Ration With Velvet Bean Meal

I have a herd of 30 grade Guernsey and Jersey ws and sell bottled milk. Please give me a bal- ced ration from the following feeds: Cotton- ed meal, velvet bean meal, wheat middlings, and ts. I can sometimes get cocoanut meal and could e some corn. My hay is sorghum and peas mixed d shredded corn fodder. I am not giving you ices as I have to use what I can get, but want a ed that will give a good flow of milk.

Fredericksburg, Va. J. L. P.

We suggest a mixture consisting of 200 lbs. ound corn, 200 lbs. wheat middlings, 200 lbs. vel- t bean meal, and 100 lbs. of cottonseed meal. is mixture will supplement roughage very well. r moderate milk flows, feed one pound of this xture for every 3½ lbs. of milk produced. Let ch cow have daily a liberal allowance of sor- um and pea hay and then give each one some of e corn stover to pick over, not forcing them to t the coarser parts.

We would prefer wheat bran to wheat middlings it could be obtained at about the same price.

Day's Work for Corn Binder

What do you consider a good day's work for a rn binder and how many horses do you advise ng?

Rockford, Ill. R. T.

Under normal conditions a corn binder drawn by ee horses should cover about 7 acres in a 10- ur day. If the corn is planted in rows 42 inches art it takes 2½ miles of travel to cover an acre d about 18 miles to cover 7 acres. This is at the e of a little less than 2 miles per hour for 10 urs and should not be difficult of accomplishment less the corn is very heavy or conditions other- se unfavorable. If the machine is working well, corn all standing upright, and if the team walks t, the accomplishment may easily exceed this ure by an acre or two. On the other hand, it y happen that heavy or tangled corn and a little chinery trouble will reduce the acreage for a rticular day considerably below 7 acres. Some mers use only two horses on the corn binder, t it is a heavy load for two horses and such an fit does not generally cover as much ground as en three horses are used. Other farmers find t the use of four horses in heavy corn or on hilly d results in an increased acreage. In cutting n for fodder two men will ordinarily be able to p up with the binder in shocking if a bundle rier is used to reduce to a minimum the amount carrying which the men must do. This makes 7 es a normal day's work for three men when aid- by a binder in cutting and shocking corn.—mers' Bulletin 992.

Sweet Clover for Silage

am having good success pasturing sweet clover; et fully twice as much milk per acre as I did m blue grass. And I now have twenty acres that would like to silo next spring if I thought it uld make good feed. Have you any records of ing it?

Decatur, Ill. F. C. B.

Sweet clover has been used for silage and it is imed that for this purpose it is superior to either alfa or clover. Sweet clover is a high protein d and does not cure out in the silo as well as a en material which contains a higher proportion carbohydrates. Silage from legumes is very lia- ble to be strong smelling and, in some cases, may even spoil in the silo.

Some time ago an Iowa correspondent sent us the following information concerning the use of sweet clover for silage in that state:

"Sweet clover has proved to be a valuable plant for pasture and hay. It is now coming into prominence as a splendid silage plant. A number of growers use it for this purpose, and all report very satisfactory results. One of these sweet clover growers who has used the plant for silage states: 'We had no trouble in getting stock to eat sweet clover silage. However, they were used to pasturing it. I put in loads of sweet clover alternate with corn, and it was sweet and smelled the same as corn silage.'

"Another farmer reports that the great amount of leaching that occurred was the only drawback he found in using sweet clover for silage. He states that the liquid material would flow off in a stream at the bottom of the silo. In this case the sweet clover had been siloed when very succulent. On the other hand, a farmer who siloed sweet clover and did not cut the plants until they were in full bloom experienced no loss of this kind. 'We have used it for silage purposes,' he says, 'and had excellent results from feeding it. We fed it to cattle, hogs, and colts, and after a few feeds they ate it readily. It seemed to come out in just about the same condition that corn silage does. It heated considerably, but there was no mold. There was quite a clover odor to the silage, and of course it was somewhat different from corn silage, yet it had a similar pungent odor.'

"Some of the evidence shows that it is better to cut sweet clover for silage when it is in full bloom rather than when the plants are extremely succulent. It is safe to say that sweet clover will be used more and more for silage in the future. Indications are that in some localities it is likely to become a very important crop for this purpose. Those farmers who have used sweet clover for silage regard it of such great value that they intend to continue using it for this purpose."

Garlic in Pasture—A Ration

There is garlic in our pasture and the milk is flavored with it. What is the best way to get rid of this?

Our cows are mostly Holsteins, grade cattle, and they give an average of 9 lbs. at a milking. Now we have no clover or alfalfa but we have corn and corn fodder, and can buy a mixture molasses feed. We can get bran only 100 lbs. at a time. What would be the best ration with these feeds?

Rosedale, Pa. E. R. D.

There are two important steps to be taken by the dairyman in protecting himself from this trouble. The first is to prevent the cows, so far as possible, from obtaining garlic; the second is to manage the herd on garlic pasture in such a way as to have it suffer the least harmful results.

Garlic makes a growth much earlier in the spring than pasture grasses, and therefore is usually most troublesome when cows are first turned to pasture and when grass is not plentiful. In many cases garlic is localized in the pasture and these places should be fenced off and used for pasturing stock other than milk producing cows. When the garlic is scattered about the fields it is impossible to do so, and the dairyman who would not have the flavor of the milk of his cows impaired must so manage his herd as to overcome the difficulty. The unpleasant odor and flavor are strongest in milk from cows that have just eaten the garlic. If, three or four hours before milking, the cows are placed in a garlic free field, the trouble will be reduced to a minimum. If such a field is not available, they may be brought to the stable yard and fed on silage or hay and allowed to remain out of doors until the regular milking time. This practice the dairyman can usually follow without serious inconveniences.

The trouble caused by garlic is not liable to last long, as the weed is usually cropped off by the cows within a few days after they are turned to pasture, and as soon as the grass becomes plentiful they will eat that in preference.

The complete eradication of the garlic plant is the most satisfactory method of avoiding trouble and is practicable on the ordinary dairy farm. Those interested in such eradication should write to the Department of Agriculture, Washington, D. C., for Farmers' Bulletin 610, entitled, "Wild Onion; Methods of Eradication", and Farmers' Bulletin 608, which gives directions for removing the garlic flavor from milk.

The most economical basis for a dairy ration is a liberal supply of nutritious roughages. At the present price of roughages, we believe our inquirer can very well afford to purchase a legume hay, such as clover or alfalfa, and feed it in as large amounts as the cows will clean up. The prices of these hays seem high, but under most markets they will supply nutrients much more economically than they can be purchased in concentrates. In addition to such a hay, we would feed corn fodder in as large amounts as the cows care to consume it.

In addition to this, feed a concentrate mixture to the heavier producers if they are to make their best production. A mixture of 300 lbs. corn, 200 lbs. of a light protein feed, such as ground oats or bran, and 100 lbs. of a high protein concentrate, such as oil meal, cottonseed meal, cocoanut meal, or peanut meal should be satisfactory. Such a grain mixture should be fed to the cows, in addition to the roughages of hay and fodder, at the rate of 1 lb. for each 3½ to 4 lbs. of milk produced.

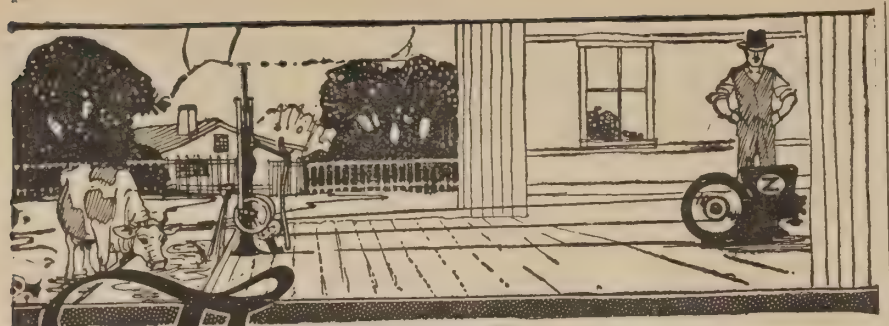
Danish Cattle and Butter Figures

Due chiefly to shortage of feed, the number of cows in Denmark is expected to decrease by about 100,000 within the next six months. The present estimated number of cows in that country is 950,000, which is about 200,000 less than in the summer of 1917. According to reliable reports received by the United States Food Administration the reduction in Denmark's butter supply will exceed 2,000,000 lbs. during the coming year.

Facts like these should remind United States dairymen of the growing dependence of foreign populations on American dairy products. In prewar years Denmark exported butter to the British Isles which now must look to other sources of supply.

Continued shortage of feeding stuffs in Denmark has resulted in the use of ground heather as a fodder substitute. The heather is reduced to a coarse flour and when mixed with blood from slaughter houses is used to replace peanut meal, copra meal, and other fodder which can no longer be obtained in Denmark. A mill recently erected for the manufacture of this feed now has a daily output of about 200 bags.

This development in the foreign fodder situation is mentioned by the United States Food Administration as showing the ability of other nations to meet difficult conditions imposed by the war. With the greater and more varied natural resources of the United States, our dairymen have the opportunity to exercise equal ingenuity in maintaining production when customary feeds cannot be secured in normal quantities. Farmers are asked to prevent all waste of feed as well as of food. This can be accomplished in large measure by storing fodder and other coarse feeds carefully to prevent loss of nutritive value through weathering.—United States Food Administration.



New York Dairy News

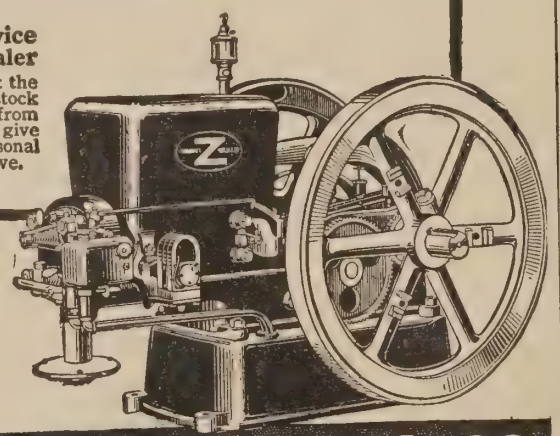
HOARD'S DAIRYMAN:—More calves are being raised than in previous years according to the reports that we get. It is not likely that these will sell for as much as it costs to raise them in a majority of cases. It is by no means certain that there is a serious shortage of stock in the world at present, and in the warring countries when the war is over there will be none too much money to buy with. It is all right to raise calves if one wants them. Beyond that it may be something of a question.

Cows are being offered for sale to quite an extent, but the buyers are in fair supply. One difficulty is the fact that the farmers and the buyers both want the same cows. It is a good sign when dairymen want to sell the poorer cows and keep the best ones. Not long ago the farmer wanted money so badly that he sold the best and kept the poorer ones. In my locality I have heard of no sales above $150 for grade cows, and the common price is nearer a hundred. Inferior cows are rather slow sale, but they can be sold if the price is cut close enough. Shippers of dairy cows to other localities do not want to look at these and the shipper of the poorer sort pays much less for his stock. They must be sound and four-teated if to be shipped for dairy purposes. Buying under such circumstances takes a lot of travel. In the days before the auto it would be more than the job is worth. I am glad dairymen have a better idea of the difference in cows.

Corn Being Displaced for Silage

Silos have been filled quite well this season but I think that less corn has been raised than for many years. Clover and the grasses were used to fill the silo partly; in some cases second crop clover has been added and sometimes millet is used. In most cases there has been some corn, although I have heard of a few who raised no corn at all but filled the silo in haying time. Practically all agree that

The Engine Selected by over 150,000 Farmers



RECORDS made by over 150,000 practical farmers buying over $10,000,000 worth of Fairbanks-Morse "Z" Farm Engines have never been equaled in Engine history.

Demand, as they did:

1. Fairbanks-Morse Quality.
2. Economy in first and fuel cost, and low upkeep.
3. Simplicity and Staunch Durability.
4. Light-weight, Substantial, Fool-proof.
5. Gun-barrel Cylinder Bore.
6. Leak-proof Compression.
7. Complete with Built-in Magneto.
8. More than Rated Power.

You Also Get Service from your Local Dealer

Your local dealer has just the type "Z" for your needs in stock—waiting for you. Buy from him. He is prepared to give prompt delivery and personal service right where you live.

The 3 and 6 H. P. sizes are built to use kerosene, distillate, stove oil, tops or gasoline. The 1½ H.P. size uses gasoline only.

The Farmer's Concrete Mixer
SHELDON Batch Mixer Price $11.50 Up

Concrete saves lumber and steel for ships. A Sheldon Mixer saves labor and gets the work done besides. Designed especially for the farmer. Highly praised by users. Farmers everywhere say it's the ideal machine for them. Used now in every State and in a dozen foreign countries. Small enough to move easily—big enough to keep six men busy. Lowest in price. Build your own feeding floors, silos, tanks, troughs, foundations, cribs and buildings.

Read What These Sheldon Owners Say

I and my hired man laid a feeding floor for my hogs, 24x14, in one day; also put floor in my cow barn. My neighbor liked it so well I am not able to keep it at home—ANDREW CHRISTENSEN, Hancock, Minn., Rt. 1.

We have used the mixer during past year for putting in cement foundations for a complete set of farm buildings, including silo, and like it very much—DANA WRIGHT, Jamestown, N. D.

Last year I bought a cement mixer from you with which I am well satisfied. It did not take long for it to pay for itself and I surely can recommend it to anyone needing a *big mixer at a small price*—WM. PARKS, Martinton, Ill.

I am more than busy with my Sheldon Concrete Mixer. Have more work than I can do. *I get $10 a day when I work out*—JESSE L. WITTER, Wellsville, N. Y.

The machine works fine. Have already *got the job* of mixing concrete for the bridges in this township—JOHN ROSE, Spartansburg, Pennsylvania.

Last spring we purchased of you a set of castings to make a concrete mixer. It was constructed per the plans furnished and it *surely worked great*—D. M. BEDBAKER, Freeport, Ill.

FREE PLANS

Make your own concrete mixer. You can do it at a cost so low you can not afford to mix concrete by the shovel method. Along with our iron parts we send Free Plans and permit for making your own machine. A good way to get a practical mixer at a small expense. Or, we will sell you the complete machine, ready built.

Make Big Money at Concreting

If you buy a Sheldon Mixer for your own use, you can make many times its cost in a season by renting it to your neighbors. Or, if you want to go out with the mixer on contracts, you can easily earn $8 to $20 a day. Our customers are doing it right now. The jobs go to the man with a Sheldon Mixer every time.

Write For Our New FREE Catalog

Shows our full line of mixers which are sold direct to you on strong guarantee. *Thirty days trial* privilege. No other like it. Patented. Two styles, hand and power. Mixes 2 1-2 cubic feet a minute. One man can operate it, but it will keep 2, 3, 4, 5 or 6 men busy. Continuous chain drive. Tilting dump. Easily and quickly moved. All parts guaranteed. Does work equal to $400 mixers. Be sure to get the catalog. Write today.

My New Special Offer

I want to tell you about my co-operative plan by which you can get my time-tried, thoroughly proven Sheldon Batch Concrete Mixer at little or no cost to you. I want ten men in every county to accept my special co-operative offer right now. Are you going to be one of the ten? Write and say: "Send me special offer."

The Sheldon will pay for itself on first small job. Takes the backache out of concrete. Makes possible those many small improvements that add so much to the value of your land.

SHELDON MANUFACTURING COMPANY, Box 735, Nehawka, Neb.

When Writing to Advertisers, Mention Hoard's Dairyman

hay makes good silage. Sometimes this is without clover at all, although usually there is more or less clover in the mixture. A few new silos have gone up the past season, but such would not have been the case except for the use of hay for filling. Of course I do not mean dry hay, but grasses that would make dry hay if the weather and time permitted. It is labor saving that causes the change from corn and that put clover and the grasses into the silo. Bad weather makes but little difference in doing the work.

The labor question has been a really serious one in my locality the past season and the seriousness is not over yet. Another season it looks to be the most bothersome ever, and the hardest problem of the dairy farmer. The trouble is seriously aggravated by the fact that manufacturing and business are so profitable that they can outbid us in point of wages. So long as we cannot compete with business in securing help we must go without it for the most part. We hear of localities where business men volunteer to go out and help farmers in the busy season. Some are said to go and carry men from the factories and elsewhere after three o'clock, for example. This sounds like a good thing and really right from whatever angle we look at it. As far as I have been able to search out those reports, they are almost groundless.

A Question of Wages

A question comes up as to how much we better pay next year for help. I know of a case where a man was hired for the year at forty dollars a month and board. He was a good man but rather slow. It was this man who got under the influence of the slacker and then would not work after five o'clock, but who did somewhat better after the trouble-maker had gone. A short time ago the factory offered him three dollars a day and he left the farm and went to town. He is to get 45 cents an hour for overtime, and if he gets his work done at five he goes without loss of pay. Of course he should have done as he agreed, and had the farmer been informed, as he should have been when negotiations with the factory commenced, he might have made it possible for the man to stay. However, the man is gone and it is doubtful if a dairy farmer can compete with such wages, although when board is considered rightly he might be. How much should a dairy farmer pay next year?

Forty or fifty dollars a month besides board is more than he can get from the work that the man can really do. There are two other points to consider. One is the necessity of producing foods and the other is keeping the farm from running down. Taking these two into account it may be better to pay out all one can get and keep the farm going. I do not believe that the farmer is the only one who should sacrifice. That hired man ought to do his share, but who is going to blame him if he does not, except in cases where he breaks his word in leaving?

One writer has a plan for the dairyman which is good in its way. Add to the dairy business that of pure-bred cattle. That is not dairying; it is another line. Many dairymen cannot follow it, but a few can. A few less cows and some pure-bred calves may help somebody out a little. It might lessen the labor and if there are not too many payments to make and too much interest to meet it may put one in position for a little profit a year or two or three hence.

Speculating About Rain

Ever since the European war commenced there has been some excess of rain in many sections of the country, and this is true of my own locality. Other sections have been too dr at least a part of the time. That th excess of rainfall is due to the wa is believed by many, but the weath department says that such is not th truth.

It is often claimed that the sudde jar as of thunder or possibly th from a monster gun causes rain. Fo lowing a sharp clap of thunder the is usually heavier rainfall, and it not strange that people ascribe this the jar. Many have seen the little e periment of a very fine spray of w ter brought together by the influen of electricity, however. The old sto experiment of inducing static ele tricity by rubbing a rod of glass hard rubber and then holding the ele trically excited rod near the fine spr brings the tiny drops closer togeth and forms larger drops. This c be readily observed if the spray fa on some tin object so that it makes slight noise. When the drops a larger they strike harder and ma more noise. No more water falls a the same is possibly true when t rainfall seems harder after the ele tric discharge causing thunder. No then does not necessarily make ra fall.

There is another view held by so scientists and which is also dis proved by the weather departme It has been observed by many th following an eruption of a volca with much attending dust there more rainfall. It is also said by so that drops of water are alwa formed on dust particles. If th were no dust there would be no m and no less moisture but it would fall as rain but cover the trees, bu ings, and the earth and other obje as a blanket. The air would be sa rated all the time with moisture never knew how the scientists pro their contention. They always some fascination for me, althoug never tried to defend the notion. weather bureau does not explain their bulletin any of these matt but simply says that they are not able. We cannot make it rain shooting cannon unless there is m ture in the air, and possibly not th Presumably one cannot make it by throwing dust in the air either.

New York. H. H. LYON

Importations of Cream Separa

In accordance with a new ruling the War Trade Board, no licenses be issued for the importation cream separators of types which not permitted to be manufacture the United States.

Before the issuance of any lic for the importation of cream s rators the applicant must state firmatively that the separators so to be imported are one of the t permitted to be manufactured in United States. This ruling has adopted by the War Trade Board the protection of American manu turers of cream separators who, ruling of the War Industries Bo are limited to the manufacture of tain specified types of cream sep tors. It was felt that it would be fair to permit foreign manufa ers to sell in the United States ant types which could not be manu tured in American factories.

Lake Mills Holstein Sale

Holsteins at the semi-annual Lake ills (Wis.) Consignment Sale, Oct. and 23, did not aver age quite as gh as at previous sales but it was vertheless a fairly successful sale. ie factor that held down prices was at quite a large number of cattle re not in sale condition. The avage buyer at a public sale pays the st prices for animals that please e eye, other things being equal, and ny of the animals led into the ring re thin and out of condition.

There were, however, some excelt animals, in real sale shape, ofred and these brought good prices. ost of them were from the herds of e regular consignors to the Lake ills sale and in the main commandprices satisfactory to the men who tered them.

Lady Oak Bessie Homestead, a autiful yearling heifer consigned by nj. Berg, topped the sale, going to drew Frank, Wisconsin, for $1,675. ie is from a 34.14-lb. daughter of omestead Jr. DeKol and sired by nary Fobes Bessie Homestead, a 31- grandson of Homestead Jr. DeKol d Canary Paul.

Pabst Korndyke Arnold, a 31-lb., ne-month-old grandson of King Ponc Champion and Johanna McKinley gis, was the highest priced bull sold. e was consigned by the Pabst Stock rm, Wisconsin, and purchased by ank Shadewold, Wisconsin, for ,000.

The entire 184 animals sold avered $202.

F. H. Everson managed the sale. aeger, Kelley, and Mack did the lling, with S. T. Wood in the box.

A detailed list of animals sold and rchasers follows:

P. Linde, Wisconsin
Laura of Deerfield $140
wn & Keller, Wisconsin

Increases Farm Efficiency

IT'S no hardship to do the chores after dark these long evenings if you have Delco-Light.

Plenty of bright, clean, safe light, in house, barn and yard.

Running water everywhere.

Electric power to operate the churn and cream separator, the washing machine, the vacuum cleaner and the milking machine.

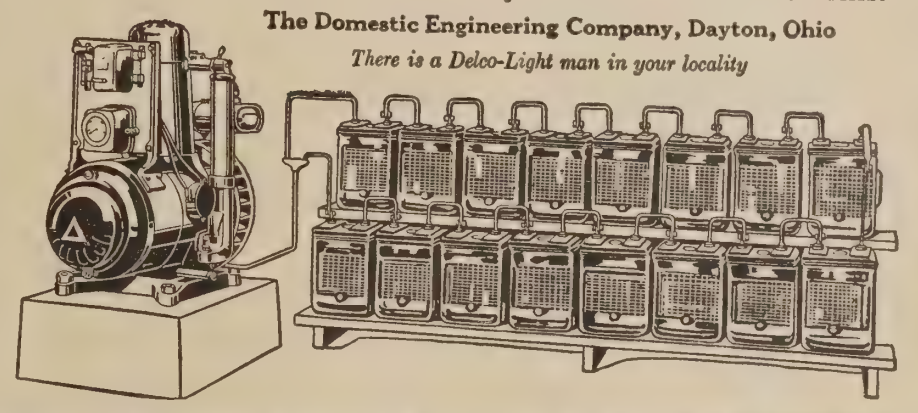
Delco-Light is making farm life attractive and profitable on over sixty thousand American farms.

The Domestic Engineering Company, Dayton, Ohio

There is a Delco-Light man in your locality

Delco-Light is a complete electric light and power plant for farm or country home.

It is self-cranking.



Air cooled.

Ball bearing.

Has thick plate, long lived storage battery.

No belts.

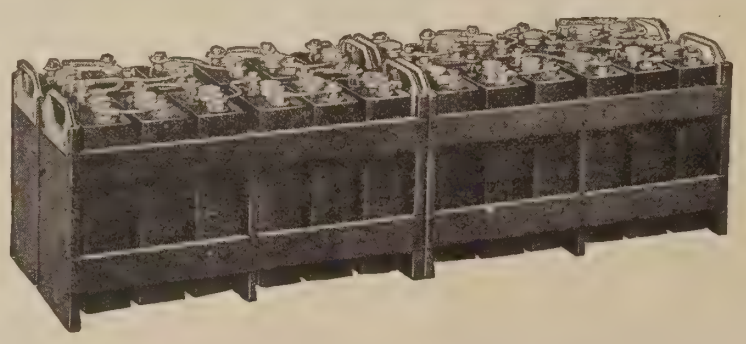
A maxim: "If you would love mankind, you must not expect too much from them."

The great Chicago fire was caused by an upset kerosene lantern in a barn. It was spectacular and everyone knew about it. But every year similar accidents cause the loss of millions of dollars in buildings and live stock of which you hear little because the fires are scattered throughout the country.

Protect yourself by installing electric light. Make your barn safe—make your home cheerful. Enjoy the advantage of electrically-operated milking machines, separators, churns. Let the women folk know the comfort of electric fans, sewing machines, irons, washing machines, vacuum cleaners.

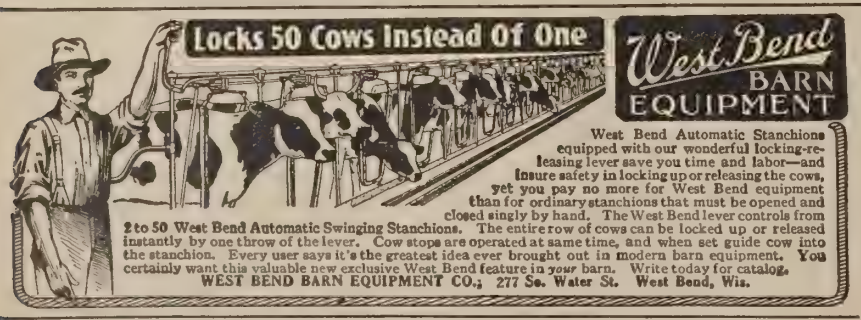
When you come to select your lighting and power plant remember that

YOU CAN SPECIFY AND SECURE THE



EDISON STORAGE BATTERY

WITH *ANY* RELIABLE POWER AND LIGHT PLANT



No matter what make of plant you select, ***insist*** that it be equipped with the Edison Storage Battery. The battery is the vital part of the plant; it must be right or you cannot get good service and economical light and power.

The Edison Storage Battery is the one different battery, the only one made of steel—rugged, durable, good for years of service without repairs or replacements, with no attention other than the occasional addition of a little distilled water.

There are still some dealers who do not know that the plants they sell can be equipped with the Edison Storage Battery. If your dealer is doubtful, write us at once and we will see that you are supplied.

EDISON STORAGE BATTERY CO., 263 Lakeside Avenue, Orange, New Jersey

West Bend Automatic Stanchions equipped with our wonderful locking-releasing lever save you time and labor—and insure safety in locking up or releasing the cows, yet you pay no more for West Bend equipment than for ordinary stanchions that must be opened and closed singly by hand. The West Bend lever controls from 2 to 50 West Bend Automatic Swinging Stanchions. The entire row of cows can be locked up or released instantly by one throw of the lever. Cow stops are operated at same time, and when set guide cow into the stanchion. Every user says it's the greatest idea ever brought out in modern barn equipment. You certainly want this valuable new exclusive West Bend feature in *your* barn. Write today for catalog.

Hairless Pigs---The Cause and Remedy

(Continued from page 511)

Again, a farmer may lose 90 per cent of his spring pigs by this malady and yet that same breeding stock may produce under summer conditions, such as pasture and exercise, good litters in the fall. It is such conditions as summer pasture and exercise that are important factors in preventing this malady without the use of potassium iodide.

Proper Rearing May Prevent Hairless Pigs

We have reared a considerable number of sows on rations made partly of grains, but with 25 per cent of alfalfa in the ration and under these conditions have never had a case of hairless pigs. They were even confined in pens while on these rations. But when our young stock was started at weaning time on concentrates such as grains and skimmilk, and little or no roughage was used in the ration, hairless pigs often resulted; and there was just as much iodine in the ration as in the other.

Alfalfa or clover hay should form 25 per cent of the ration. If choice leafy hay is fed in a rack, sows will (usually) eat this proportion of hay. However, if they do not eat enough of the uncut hay to make about 25 per cent of the ration, the hay may be cut and mixed with the other feed.

An extraordinary outbreak of hairless pigs occurred in the spring of 1917 in areas in Montana not previously affected. There had been a cold, long winter, roughage was scarce, and the animals were wintered mainly on grains. In the spring of 1918, after a mild winter, with practically no snow and plenty of hay, there were almost no cases of hairless pigs in the "unaffected" areas.

In Wisconsin, the spring of 1918 saw some of our breeders experiencing this malady for the first time. The winter had been extremely severe and roughages were scarce among those suffering most. Our experience indicates that the liberal use of roughage and the feeding of rations not excessively high in protein are by far the safest rules to follow in the rearing of gilts for breeding purposes, if the common occurrence of hairless pigs is to be prevented. Farmers should not rely wholly on grains and skimmilk for their breeding gilts. Introduce 25 per cent of the ration as cut alfalfa or clover. This gives bulk to the ration and insures proper elimination of waste through the intestines. It keeps the intestines in a healthy condition and will allow the absorption of sufficient amounts of iodine naturally present in the feed to meet the sow's needs without the use of potassium iodide. Keep the animals out and provide exercise. Goiter is most prevalent in northern, mountainous districts with cold, long, damp winters and little sunshine, than in the warmer climates with plenty of sunshine and opportunity for exercise.

The suggested method of rearing breeding swine may not always prevent goiter—some cases will need the potassium iodide treatment—but we believe proper rearing will go a long way toward solving a growing difficulty in this state. However, if you had hairless pigs in the spring of 1918 it will be advisable to use the potassium iodide treatment this winter.

Summary

Goiter, or an enlarged thyroid gland the function of which is disturbed, is the cause of hairless pigs. Both old and young are afflicted with enlarged glands.

The enlarged glands are deficient in iodine, which is essential to the proper action of this gland and the production of normal young.

Iodine, supplied the female breeding

it stock during the gestation period, wi prevent this trouble. One-third to one-sixth of an ounce of potassium iodide to each 100 pounds of feed will pvent hairless pigs. Do not use mre.

Nearing the breeding sows with plenty (25 per cent) of good roughage, such as alfalfa or clover hay, in the ration and not an excessive amount of protein may do much toward preventing this trouble and thus avoid the necessity for using the potassium iodide treatment later.—Wisconsin Bulletin 297.

Agricultural Reconstruction After the War

(Continued from page 513)

upon good live stock with which to begin over again.

Meat is high and is badly needed for war purposes and this is the time to sell the scrub. Send it to the shambles, get it off the farm and replace it with better bred, more profitable stock that can be produced by intelligent breeding and handling.

These suggestions are not intended to influence farmers to let up in their activities or to reduce their flocks and herds below a workable basis. On the contrary, now is the time to work harder and longer, plan more wisely, and save more scrupulously than ever before. A man's time is worth more now than ever before, if he only takes advantage of the situation. Therefore, he should use it to the limit. *Save;* I repeat again. The first way to save is to pay debts, and second, to buy government securities. You should buy bonds anyway if you cannot do both because that is investing cheap money in a security that will represent dear money after the war.

Anticipate the change. Don't be caught with a lot of scrub, unprofitable live stock on your hands that is now needed for food for our soldiers and that will bring good prices.

Buy only real necessities, wait for absolutely certain lower prices, and take the profit yourselves.

Market Reports on Dairy Products

The Bureau of Markets of the United States Department of Agriculture has established a market news service on dairy products, and daily bulletins are issued from the Washington office and the branch offices in Boston, New York City, Philadelphia, Chicago, Minneapolis, and San Francisco.

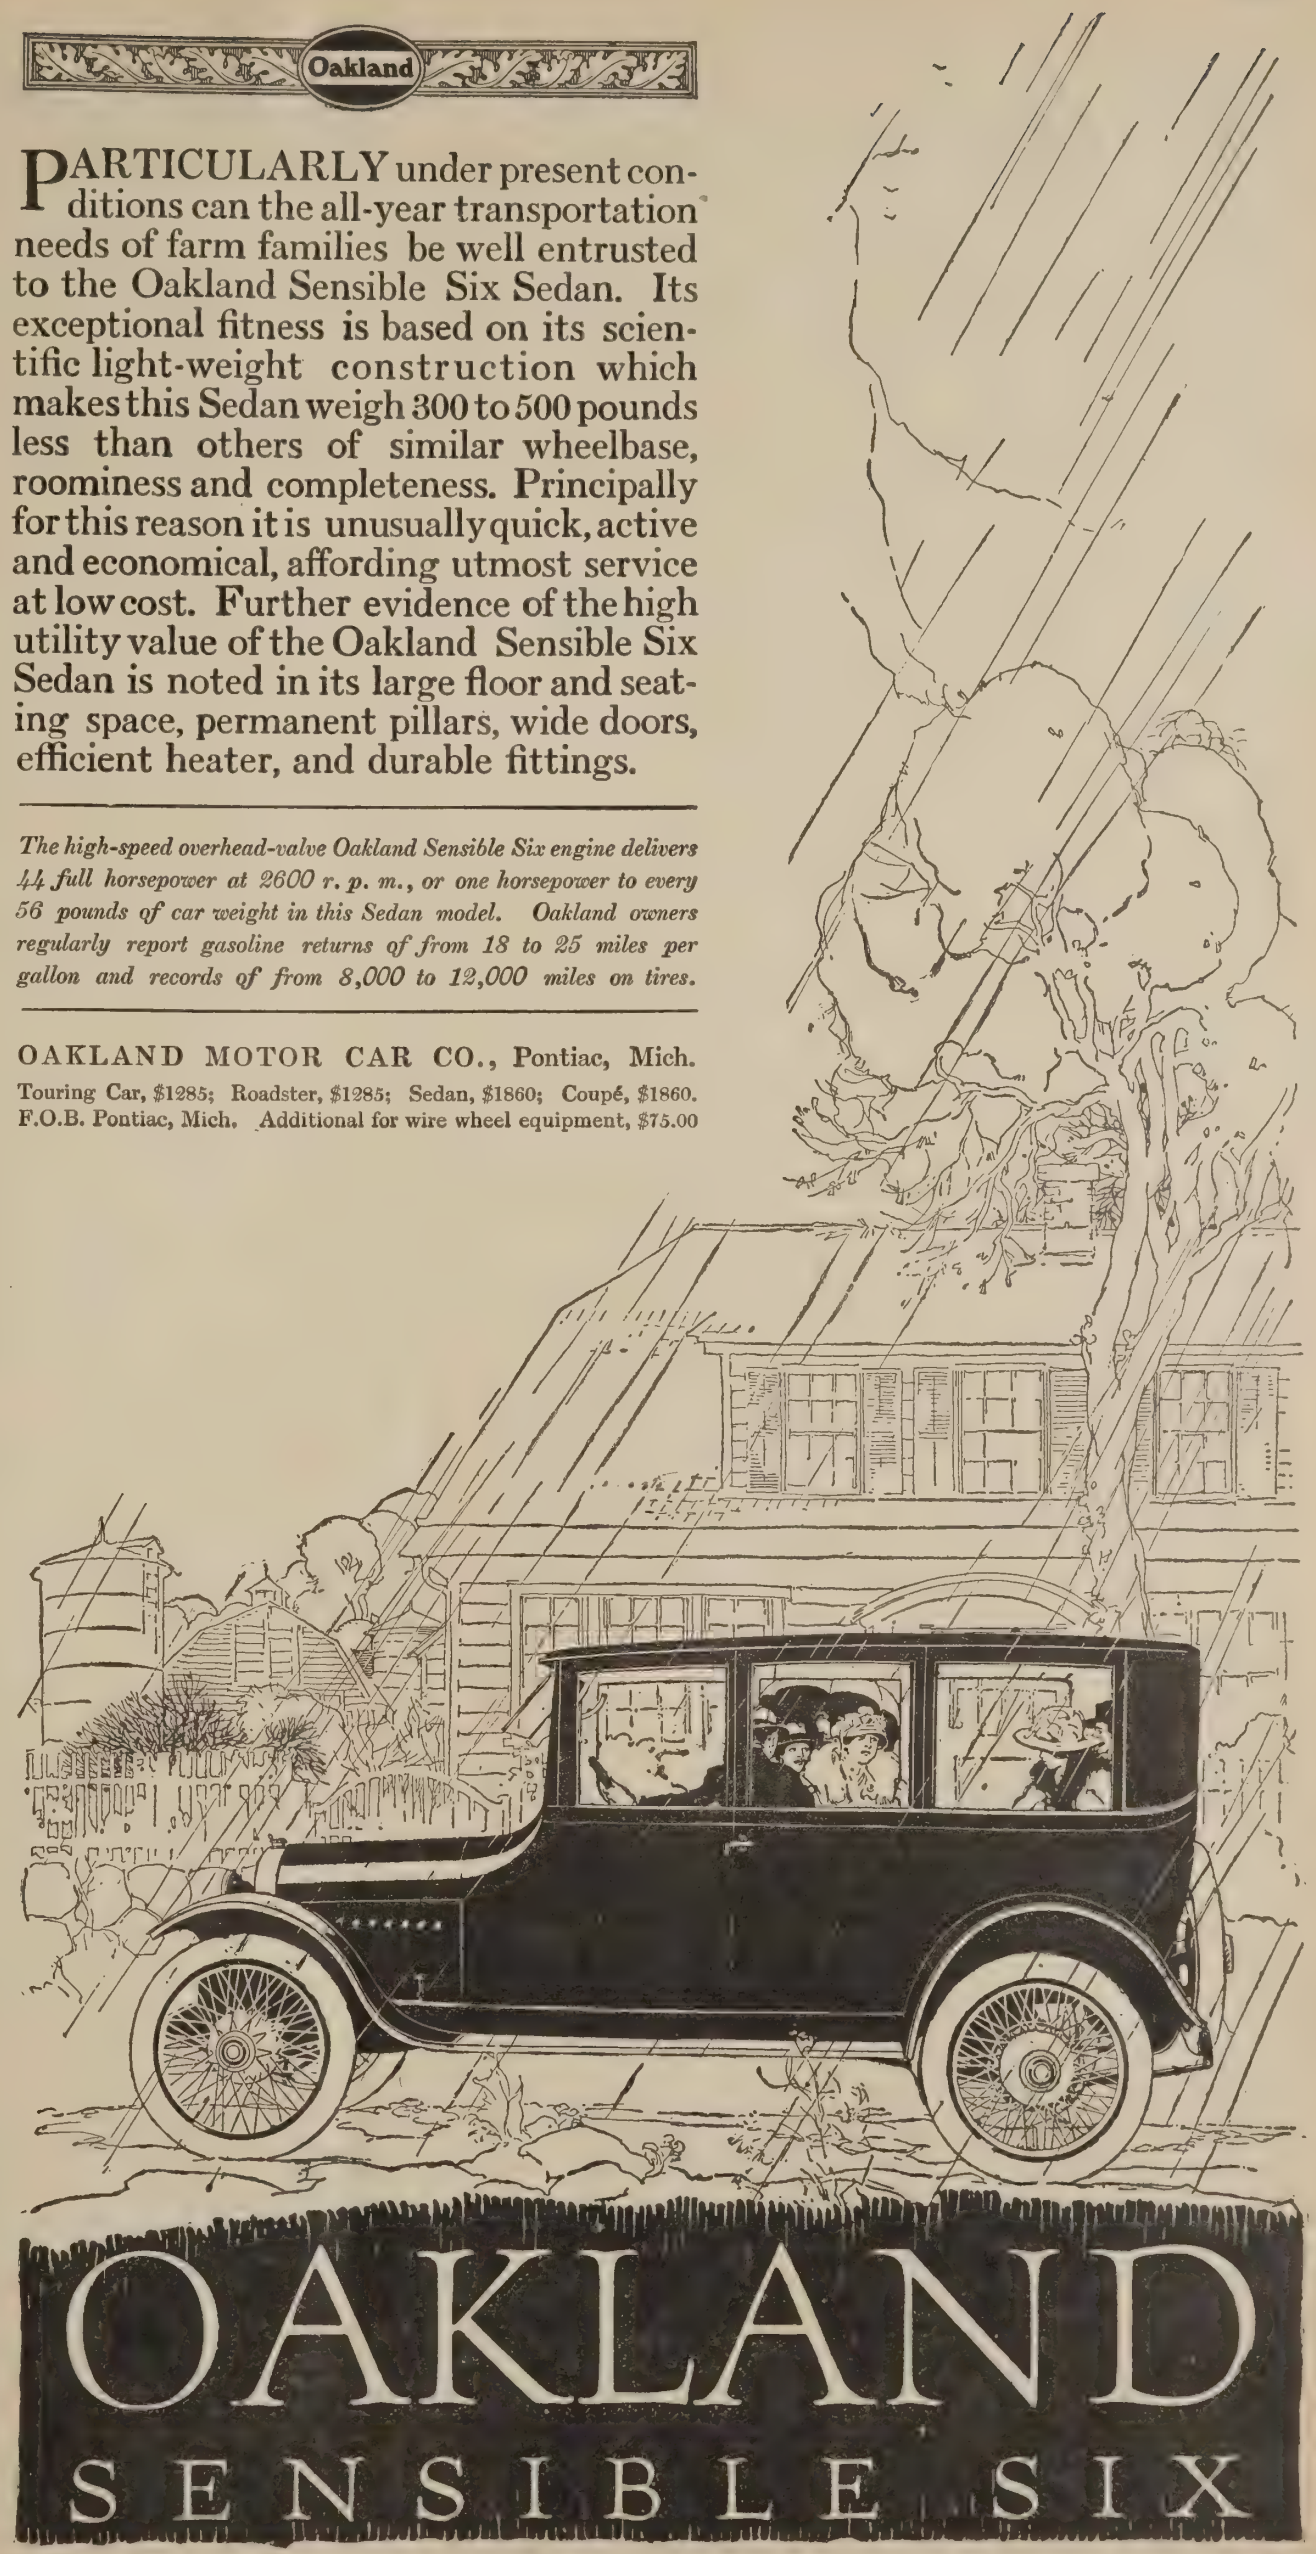
The Daily Butter Bulletin gives a daily summary of the receipts, shipments, supplies on local dealers' floors, cold storage movement, prices, and a brief comment on the market conditions at each of the large markets.

The Daily Egg Bulletin gives statistical information of the principal markets, as arrangements for reports of prices and market conditions are now pending.

Each week a summary of the cheese supplies, holdings, and storage movement is issued in addition to a daily cheese bulletin.

Monthly reports of production and cold storage holdings of various dairy products are issued, including fluid milk prices in the larger centers and prices paid to market milk producers and supplying condenseries.

Persons interested in these bulletins may secure same upon request to the Bureau of Markets, Washington, D. C.



Boys can't go to war now with their fathers as they did in the wars of old. But they can give a fine service just the same by earning and giving to the funds to make the soldiers' lives easier. Victory boys and Victory girls are unselfish.

Oakland

PARTICULARLY under present conditions can the all-year transportation needs of farm families be well entrusted to the Oakland Sensible Six Sedan. Its exceptional fitness is based on its scientific light-weight construction which makes this Sedan weigh 300 to 500 pounds less than others of similar wheelbase, roominess and completeness. Principally for this reason it is unusually quick, active and economical, affording utmost service at low cost. Further evidence of the high utility value of the Oakland Sensible Six Sedan is noted in its large floor and seating space, permanent pillars, wide doors, efficient heater, and durable fittings.

The high-speed overhead-valve Oakland Sensible Six engine delivers 44 full horsepower at 2600 r. p. m., or one horsepower to every 56 pounds of car weight in this Sedan model. Oakland owners regularly report gasoline returns of from 18 to 25 miles per gallon and records of from 8,000 to 12,000 miles on tires.

Boys Get 100 Bushels from Acre Corn Plots

The reports of the Acre-of-Corn Club boys are proof that neither high price nor scarcity of seed corn last spring kept the club members from getting good yields from their Wisconsin pure-bred strains. Yields of more than 100 bushels to the acre have already been reported, and the record is, thus far, 110 bushels.

T. L. Bewick, state leader of boys' clubs of Wisconsin, urges that the young corn growers select and cure their seed corn carefully this year, and continue the practice, so that the state may never again suffer such a dearth of seed as it did last year. He announces that a plan is now under way to list the names of the young growers who have for sale pure-bred seed from fields planted at least 40 rods from any other variety. Those who wish to sell the seed can obtain names of buyers by writing J. L. Bewick, College of Agriculture, Madison, Wis.

Willowmoor Farms Still Breed Ayrshire Cattle

A report has been made to the effect that J. W. Clise, owner of Willowmoor Farms and prominent breeder of Ayrshire cattle, Washington, sold his herd to Mr. Gossard of Indiana. Many have assumed from this report the entire Willowmoor herd had been sold, whereas Mr. Clise still owns over eighty head after selling ninety-nine well bred animals to Mr. Gossard. Mr. Clise retained his herd bull and will continue the breeding of fine Ayrshire cattle as in the past.

AN INTERESTING SHORT STORY

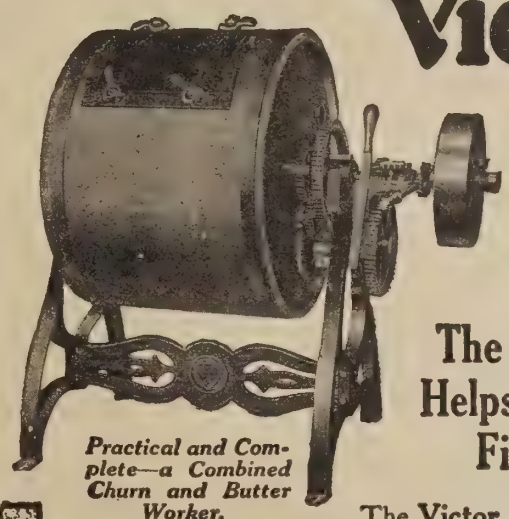
We cannot prepare any better advertisement for

GOMBAULT'S CAUSTIC BALSAM

than the following voluntary testimonial from a man who stands very high in all business and social circles where he is known:

No. 2131 Wyoming Avenue, Washington, D. C., November 26, 1917.

The Lawrence-Williams Co.,



Dear Sirs:—I have had GOMBAULT'S CAUSTIC BALSAM constantly in my home for thirty-three years and have used it for a large number of animal and human ailments. It is by far the most effective, reliable and economical medical preparation that I have ever known. Its persistent use for chronic rheumatism, lumbago, neuritis and kindred troubles bring sure relief. For sore throat, pains in chest and acute cramps it penetrates and relieves pain. For mosquito bites, bee stings and bites of all other vermin it instantly stops all irritation. For itching between the toes and on limbs, it is an instantaneous cure. For fresh cuts, wounds and old sores, it eliminates all danger from blood poisoning and hastens a cure. A few drops of CAUSTIC BALSAM is more effective than half a bottle of any other application that I know of.

Truly yours, M. J. LAWRENCE.

GOMBAULT'S CAUSTIC BALSAM has had a steady, reliable sale in France, where it is made, for forty-five years. In the United States and Canada, with only moderate advertising, it has had an increasing sale for thirty-five years. The demand is produced strictly by its merits. Price $1.75 per bottle. Sold by druggists, or sent by Parcel Post on receipt of price. Guaranteed to give satisfaction. For further particulars and unlimited testimonials, address

The Lawrence-Williams Co., Cleveland, Ohio
Sole Proprietors and Distributors for the U. S and Canada

Victor Jr. Churn

Practical and Complete—a Combined Churn and Butter Worker.

The Churn That Helps You to Make Firm Butter

The **Victor Junior** Churn puts butter making on the farm on a level with creamery butter making. It keeps the temperature down much better than the ordinary churn both during the churning and the butter working.

The mechanism of the churn is such that it will not only churn quickly but will get all of the butter. It also preserves the butter from dust and flies because when the churning is done, the butter can be salted and worked right in the churn. It does not have to be removed until finished.

To get the best butter, the temperature of cream for churning should be from 50° to 60° F. according to the density of the cream. A rich or dense cream requires a lower temperature than a thin cream. Having the cream at the right temperature to start with counts much in producing firm butter of good appearance.

The **Victor Jr.** will do the rest. The drum of the churn is built of heavy, well seasoned lumber. Under average conditions the temperature in the churn should not rise more than a few degrees during the churning and working process. The rolls work the butter thoroughly. It comes out with a good grain and firm.

We make and sell more churns for creamery use than all the other concerns combined so you can depend on our recommendation of the Victor Jr. as the ideal farm churn. It is covered with our iron clad Guarantee.

HOARD'S DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

Portage County Calf Club

The Portage County, Wis., Calf Club is developing into a strong county organization. The Club consists of twenty-four wide awake members, representing eight towns of the county; new applications for membership are already coming in for next year. An exhibit of twenty-two calves was shown at the Stevens Point Fair the latter part of August. It would be difficult to get together an exhibit of young dairy cattle, so uniform in size, age, and of such high quality and finish as the Portage County Calf Club exhibit at the Central Wisconsin District fair, held at Stevens Point, August 20-23.

The club sent an exhibit of six calves to the Wisconsin State Fair at Milwaukee, where they were entered in the State Junior Club contest. It was an inspiring sight to see the boys and girls there from all parts of the state, putting on the finishing touches and leading their beautiful calves into the show ring. The amphitheatre was packed with spectators, there to see the best things in the world, bright eyed boys and girls, and handsome, well bred, domestic animals; there they stood, a long line of pure gold. Five individual places in the classes were won by the Portage County Calf Club; Ray Halverson, first prize Guernsey; Clarence Gordon, second prize Guernsey; Esther Newby, first prize Holstein; Marion Cate, fourth prize Holstein; Leonard O'Keefe, second prize Jersey. The Portage County Calf Club was awarded the champion calf club prize.

These young people from Portage County are going into the stock business in a businesslike way; they have kept records of the cost of production since they began their feeding projects. They are well impressed with the following important facts relative to the dairy industry: It costs more than is commonly supposed to produce a dairy cow. There is a big difference between a calf that is properly developed and one that is not. It costs as much to raise an inferior bred animal as it does to raise one that is better bred. A well bred animal properly developed is a great source of satisfaction as well as a profitable business enterprise. Many people know these fundamental principles, but few realize the truth of them from actual practice. The Portage County Calf Club knows the value of these facts. Portage County is becoming more and more of a dairy county. Practically every one of these club calves means the beginning of a good herd of dairy cattle. The leading dairymen and dairy interests of the county are interested in promoting this kind of work.

J. M. COYNER,
Portage Co. Agr'l. Agent.

EARL O'KEEFE AND HIS PRIZE WINNING JERSEY CALF. EARL IS A MEMBER OF THE PORTAGE COUNTY CALF CLUB

Boys and Girls to Help Win the War

America's boys and girls are to have a chance this fall to help win the war. Seven great organizations engaged in providing for the comfort and happiness of our soldiers and sailors the whole world over have joined to give the young generation this opportunity to do its share.

The Young Men's Christian Association, the Young Women's Christian Association, the National Catholic War Council (Knights of Columbus), the Jewish Welfare Board, the War Camp Community Service, the American Library Association, and the Salvation Army, in their United War Work Campaign to raise $170,500,000 for the continuance of their war activities, will challenge every boy and girl in the country to serve and to sacrifice in the "great cause". A separate division of the campaign, that of the Victory Boys, will have for its goal the lining up of "a million boys behind a million fighters". The girls too will have a separate division to be known as the Victory Girls.

Those enrolling in either division must pledge to earn and give an amount to be individually determined for welfare work among our soldiers and sailors, and this means that no boy or girl can give any money he or she has not earned.

The war has called half our workers away from their ordinary peace-time occupations, leaving much work undone in the homes and in the home communities. As the boys and girls will find their tasks in these now neglected fields their united effort will go a long way toward helping us keep our affairs in order over here, while the giving of money earned will make for the comfort and morale of our fighters. — NATIONAL PUBLICITY DEPT.

ESTHER NEWBY OF PORTAGE COUNTY, WISCONSIN, AND HER HEIFER CALF THAT WAS GRAND CHAMPION AT THE COUNTY FAIR AND FIRST PRIZE HOLSTEIN HEIFER IN THE JUNIOR EXHIBIT AT THE WISCONSIN STATE FAIR.

My Experience with Flemish Giants

HOARD'S DAIRYMAN JUNIORS:—I have not written in a long time, having been away from home since the first of May. I bought a seven-eighths Jersey cow before I left that gave 42 pounds of milk daily.

My Flemish Giants have been doing fine. I have twenty-four now and one doe is working on her nest and will have young in two or three days. Nearly all my young ones are does. I have four does four months old and two six months old the 18th of Oct., that weigh eight pounds. I sold the mother of these two rabbits to a Hoard's Dairyman Junior, Gordon Ball of West Virginia, after breeding her and she had eleven young. I read a letter from a junior who said he couldn't have any success with his Belgian Hares. Lack of attention, I suppose. Rabbits and hares are like a cow in many ways. If a cow does not have proper care and feed she will not do good work. The same with hares and rabbits. If this or any other junior will write me I will try to help him out.

Another junior wanted to know how to build hutches. I have built an addition to our barn 12 ft. by 16 ft. and am now working on the hutches. They are built three tiers high and each pen is 5 ft. long, 30 inches wide, and 28 inches high. There are two sliding doors to each pen, the frames being made from ¾ inch by 3 inch dressed poplar. The floor is of 6 inch tongued and grooved flooring. The material cost me $80. Father and I did the building of the house and I am making the hutches myself.

I have over 1500 lbs. of soy beans, also some pure clover hay to feed this winter. The soy beans were nearly 5 feet high. In feeding alfalfa hay care must be taken not to feed too much as it will cause kidney trouble. The hutches must be kept clean. With cleanliness, good feed, but not too much, and plenty of cool, fresh water I don't see why anyone can't succeed.

The picture I am enclosing is of 3 dark steel gray does four months old, that I am keeping to breed from. Pure-bred Flemish Giants is all the kind I have. My address is Johnson Tenn., R. No. 1.

Reasons why Styleplus Clothes are worn everywhere

Because they are stylish in appearance—designed and tailored by experts.

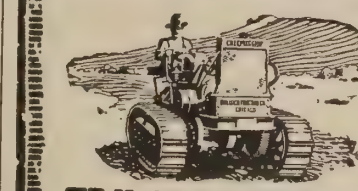
Because they are built for service—carefully constructed of good materials that can be depended on to wear well.

Because they are moderate in price—enable you to dress well and practice thrift.

Styleplus are manufactured on the standardized plan—a few grades in big volume, with costs reduced and clothing values increased.

At the price, each grade is always an exceptional value.

There is a big advantage in buying clothes at a store. You can *see* the different styles, try them on, and make the best selection. You can be certain of the fit *before* you order the clothes.



So make your pick today at the Styleplus Store in your neighborhood.

Two grades in Styleplus suits: $25 and $30.
Three grades in Styleplus overcoats: $25, $30 and $35.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. AG) for Styleplus booklet and name of local dealer.

Address BOX 296, care Hoard's Dairyman.

Empire Milking Machine in operation in the dairy barn of Mr. Wm. Van Liere, Bristol, Wis.

That Waster May Be a Producer

PERHAPS that cow you've been intending to sell may not be a "Waster" after all. Perhaps her low milk records are due to tender teats and extra-sensitive nerves, set on edge by erratic hand milking. Many good milk producers are too nervous and high-strung to yield the maximum milk flow when milked by hand.

But do not condemn them to the block before you *know* they're worthless milkers.

Thousands of such cows have responded to the *gentle, soothing, regular* action of EMPIRE Milking Machines. EMPIRES have saved many a dairyman hundreds of dollars that would have been thrown away if he had sent his so-called "Wasters" to the block.

Mr. L. E. Reynolds of Greenwich, N. Y., wrote us the following unsolicited letter about the results of EMPIRE Milking Machines in his dairy:

"The Empire Milker I purchased from you in June, 1917, is working in a most satisfactory way. For some years back I have been troubled with a few hard milking cows, and have disposed of several on this account that were exceptional good cows for milk production. My milker milks the hard ones just the same as the easy ones. I consider it the greatest labor-saving piece of machinery I have on my farm."

Put EMPIRE Milking Machines to work in *your* dairy. They will not only increase the production of the nervous cows that now "hold-up" their milk; but they'll also cut dairy costs and increase milk profits. They'll make you independent of hired help. They'll relieve you of the drudgery of hand milking.

Get these EMPIRE benefits now. Write at once for catalog 31 and complete information. We'll send it without obligation on your part.

Keep Tab on Your Cows!

Send 5c in stamps for samples and prices of our weekly and monthly Milk Record Sheets. **Hoard's Dairyman, Fort Atkinson, Wis.**

Don't Let Your Stock Lose their Summer's gain through November neglect

Your animals are now going on dry feed—hay and grain.

It's a big change from the succulent, nutritious grasses of summer pastures which supply the needed laxatives and tonics.

Keep your animals' bowels open and regular—drive out the worms—keep their blood rich—keep their digestive apparatus in order—by feeding Dr. Hess Stock Tonic.

A Conditioner and Worm Expeller

Don't allow your stock to "get off feed" and in a run-down condition.

Condition your cows for calving by feeding Dr. Hess Stock Tonic before freshing. Then feed it regularly to increase the flow of milk. It lengthens the milking period.

Buy Stock Tonic according to the size of your herd. *Here's a suggestion for your guidance:* Get from your dealer 2 pounds for each average hog, 5 pounds for each horse, cow or steer to start with, feed as directed and then watch results.

Why Pay the Peddler Twice My Price?

You buy Dr. Hess Stock Tonic at an honest price from a responsible dealer in your own town who guarantees it, and who refunds your money if it does not do as claimed.

25-lb. Pail, $2.25; 100-lb. Drum, $7.50

Except in the far West, South and Canada
Smaller packages in proportion.

Louisiana Dairymen Meet

HOARD'S DAIRYMAN:—A speci meeting of the Louisiana Dairymer Co-operative Association, Inc., w held in Hammond, La., October 4th.

The matter of the action of t Hammond local dairymen in pulli away from their state association w investigated and a spirited probe w conducted to uncover the real motiv behind this unwise move on the pa of these local dairymen. Commissio er of Agriculture Wilson led straight from the shoulder attack such men as were posing as dairym and at the same time seeking to d stroy its organization. The inves gation of the association clea showed that the only opposition the association emanated from pro ganda spread among the producers such men who are seeking to bre down the solid front of the organiz producers and by false statemer calculated to embarass the assoc tion. After some very plain wor addressed to such of these men were present and after the false sta ments that were uncovered had be explained and corrected, membersh blanks were distributed with the sult that all of the Hammond dai men present, with the exception two, promptly joined.

The question of present costs a the winter price for milk was d cussed at length with the result t several illuminating points on the creased cost of production, due pr cipally to the war and the extraor nary weather conditions this summ were brought out. J. C. Wallace ported that it now cost him 43c a g lon to produce milk. J. G. Pricha reported a cost of 41c a gallon. W. Brooke reported 43c. L. H. Bo den reported a cost of 40c and S. Pendarvis 41c. All of these dairym said that they could back their ures with data as they kept acco of all operations in the dairy. Mess Wallace, Prichard, and Bowden erate silos, raise the greater part their feed, and keep high produc cows. But the high prices offered hay, corn, and other locally rai feeds, together with the scarcity farm and dairy labor which forced the dairymen to compete w the government and large industr for labor, has caused this 31% crease over last year at this ti Nothing was done by the associat regarding the setting of a price, being left to the Board of Direct who meet soon.

After several other topics of a lo character were discussed and dispo of, the meeting, amid pledges of alty from all sections, adjourned meet again for its regular fall m ing on the second Tuesday in Nov ber at a place to be decided upon ter.

SECRETARY

Canada Commandeers Butte

In response to an urgent ap from the British Ministry of F for increased shipments of bu from Canada, the Canadian gov ment has commandeered all cre ery butter made in the provinces Alberta, Saskatchewan, Manitoba, tario, and Quebec between Septem 30th and November 9th inclus and put Canadian consumers on allowance of two pounds of crea butter per person per month.

Great Britain and the Allies h been short of butter for many mon and although an Englishman's al ance is only one-half pound of bu and one pound of oleomargarin month, the government finds it cult to maintain this meagre ra The principle of the "Common Ta is the basis of this order limiting consumption of creamery butte Canada. If tonnage permitted gr er shipments of butter, Canada w

ubt limit home consumption still
rer in order to supply a fairer ra-
n for the English table.—U. S.

Where Sanitary Conditions Prevail — ARDEN FARMS, Inc. St. Paul, Minn. — PURE BRED HOLSTEIN FRIESIANS

The Quaker Oats Co., Chicago, Ill.
Gentlemen:—We have been feeding SCHUMACHER FEED to the two new World's Champion heifers, JEWEL PONTIAC SEGIS and BEAUTY BEETS WALKER SEGIS, for some time and are pleased with the results. We also enclose herewith a circular showing the World's Records made by BEAUTY GIRL PONTIAC SEGIS another of our young heifers that has broken twenty records in all. I am pleased to advise that she was also fed on SCHUMACHER FEED.
Yours very truly,
J. M. HACKNEY

Jewel Pontiac Segis, World's Champion Senior 3-year-old Holstein.

Making 31 World's Champions to the credit of Schumacher Feed

HARDLY a month passes that does not see a new World's Champion record added to the laurels of this wonderful Dairy Feed.

This month JEWEL PONTIAC SEGIS and BEAUTY BEETS WALKER SEGIS of Arden Farms, Inc., have completed new World's Records while fitted and fed on SCHUMACHER FEED. (See owner's letter.)

SCHUMACHER FEED fed as the carbohydrate part of the dairy ration, has

More World's Champion Milk and Butter Records
to its credit than all other feeds combined.

The "top-notchers" in the dairy industry have discovered long ago that SCHUMACHER FEED is the "OLD RELIABLE" standby that helps them to increase the production of their herds. It is the feed of World's Champions because it helps to make World Champions.

You may not expect to make any world's records, but if you follow the example of most successful dairymen, whether fitting and feeding for records or for maximum dairy production—day in and year out—SCHUMACHER FEED will more than make good for you. It will prove that it is indeed the world's greatest carbohydrate dairy feed. Try it and be convinced. (107)

Keep Tab on Your Cows!

Send 5c in stamps for samples and prices of our weekly and monthly Milk Record Sheets. Hoard's Dairyman, Fort Atkinson, Wis.

You should use
UNICORN DAIRY RATION

Because—it will make more milk and cut down your milk costs.

Because—you can save from 10 to 20% of your feed costs through the use of fewer pounds of grain per cow and the increase in milk or fat per cow.

Because—there is 10% more available food material in Unicorn than in any ration on the market.

Because—it saves labor and the mistakes of mixing and feeding. It is always uniform and reliable.

Because—Unicorn Dairy Ration is suitable for feeding alone, or can be fed with home-grown corn, oats or barley. Unicorn contains ample protein and may therefore be used either as a protein feed or as a complete ration.

Why Your Boy Needs Hel

If ever you have doubt about t importance of giving money to United War Work Campaign, you c clear your mind completely by co paring the history of your countr early days with the history of western front. If, perchance, you h forgotten the history you studied the eighth grade, or in high school would be a good thing to go over again. When the first American ar went into battle a hundred and fo years ago, very little thought w given to anything except fight. Th were no comforts and very often th was no food. You will remem Valley Forge, even if you have f gotten the story word for word. Y certainly remember the picture Washington standing on snow cove ground, usually with one foot o tree stump, worrying about his h gry, shivering soldiers. You kn what a terrible time they had all t winter.

Compare the story of Valley Fo with the history of the last th winters in the European war. haven't heard of any frozen soldier not among the British, the Fren the Italians, or the Americans. W because of the perfect organizat for comfort physically and spiritu under which the great associati are employed, now consolidated in United War Work Campaign. Whet they be in American camps or on western front, our boys are cared by some of these organizations. doesn't matter whether they are P testants, Jews, or Catholics, some c petent person with more thought comfort than for creed is there, re and willing to help, There are alw men and women present to cheer homesick boy, to keep up the c munication line between him and home. This is the influence that k your boy clean and cheerful. It is influence that saves him, someti from himself, because there are cumstances you may know not about in which boy or man is tem beyond his strength to resist. A accustomed to the freedom of cou life is likely to feel himself a str figure among the thousands of e class encountered in a great army from his native land. The seven or izations I mention are asking for ey to keep up their good work an the soldiers here and across the They are represented by men and w en who understand the country just as they understand the man town. They know something a country mothers, and when they to a boy it is with those mothe mind.

President Wilson thought it a plan for seven big bodies to ge gether—Young Men's Christian sociation, Young Women's Chri Association, National Catholic Council (K. of C.), Jewish We Board, War Camp Community ice, American Library Associa and the Salvation Army—and the country in the week of Nov. for funds that are needed to car this work. It will take $170,500,0 about one dollar a week for soldier in the American army. farmers of America are expect contribute about forty per ce this money. I know they will do i cause they have learned to giv to lend since this war began. the solicitor goes around for part of the fund be sure that write your name in his book. The he is doing is for you and yours. getting nothing out of it excep satisfaction it gives a man to he country. He is giving his time strength. Surely you can give money.—CHAS. DILLON, Directo ral Publicity War Work Campai

JERSEYS *How much are a cow's teats worth?*

This depends on how much it costs to fill the udder and how rich the yield in butter fat. Jerseys are famous for the richest let-down at the lowest possible up-keep. Jerseys are known as "the profit breed" because they are natural money makers. Beautiful and hardy, their perfection has been standardized for over two hundred years.

Ask breeders for pedigrees and prices. Let us send you some very unusual information about this record-breaking breed.

JERSEYS

Please Remember That

Jersey Crest Farms are in a position to furnish you with either matured bulls or bull calves, from heavy producing dams and sired by bulls whose records are a credit to the breed.

Not only are these calves and bulls bred from high producing families but they are properly grown. In the first place, our Herd is absolutely free from all contagious diseases, have never had a case of tuberculosis or abortion in our herd. Calves get their skimmilk until they are at least a year old, plenty of grain and clover hay. A good start in life means Success in the future, with both health and strength combined.

When you are looking for beauty, look for it in the offspring of the Jersey Crest Farms Herd. Visitors always welcome.

A Guernsey Dispersion

THAT WILL INTEREST YOU

31 PURE-BRED GUERNSEYS 31

Will Be Sold

Wednesday, Nov. 20th, 1918, at Fort Atkinson, Wis.

THIS INCLUDES THE ENTIRE HERD OF RUSH CHAPMAN

15 head of milking age, either fresh since Sept. 1 or ie to freshen during the remainder of the fall and early inter. These cows have never been officially tested but ey are very good producers, well bred, of good size and ceptionally good individuals. The oldest animal is 9 ears old.

There will also be

7 open heifers from 1 to 2 years old.
2 heifer calves—2 bull calves.
3 young bulls 10 to 11 months old.

Our herd sire will be sold. He is a 3-year-old son of ob Rilma Superior, he a grandson of May Rilma, 1,073.4 s. butterfat,—(World's record for all breeds in 1914) nd of Imp. Galaxy's Sequel (32 A. R. O. daughters).

This young sire is a most promising individual, very well grown, and the sire of some splendid calves,—5 sons and 5 daughters in the sale.

Our previous herd sire, Massasoit of Bon Ayre, was a son of Langwater Demonstrator and from a cow with an A. R. record of 525 lbs. butterfat. Langwater Demonstrator was a grandson of Imp. King of the May (25 A. R. daughters) and Dolly Dimple, 906.89 lbs. fat as a 3-year-old.

3 yearling daughters and 2 3-year-old daughters of Massasoit will be sold.

All but 3 animals in this herd were bred on the farm. The herd has been tuberculin tested regularly for the past 5 years without a single reactor.

Write me for catalogs and further information.

RUSH CHAPMAN, Fort Atkinson, Wisconsin.

You Can't Afford to Overlook This Young Bull

Canary Ormsby Johanna De Kol 256894.

A SON OF THIS THREE-YEAR OLD FOR SALE.

Canary Ormsby Johanna DeKol produced 28.18 lbs. butter, 503 lbs. milk in 7 days and 111.95 lbs. butter, 2,318.6 lbs. milk in 30 days at the age of 3 years, 1 month, 6 days. Her sire, Canary Fobes Bessie Homestead (20 A. R. O. daughters), is a 31-lb. grandson of Canary Paul and Homestead Jr. DeKol. Her dam is a 17-lb. 2-year-old daughter of Sir Ormsby Johanna DeKol (31 A. R. O. daughters, 2 above 30 lbs.). Every dam in her 4-generation pedigree has a good A. R. O. record.

The Sire of This Young Bull is Mutual Fobes Longfield DeKol 82959, a son of Mooie Mutual DeKol and from a daughter of Homestead Jr. DeKol that, as a Jr. 3-yr.-old, made 30.04 lbs. butter, 630.8 lbs. milk in 7 days and 124.42 lbs. butter, 2,651.6 lbs. milk in 30 days.

This youngster is well marked and as straight as they make them; so are his sire and dam. Moreover, he's a descendant of proven producers from one end of his pedigree to the other. His dam's record as a 3-yr.-old is bound to be increased. There's no question but that he'll prove to be a top notch herd sire. He was born April 10, '18. Write us about him today, for he won't be here long.

MILFORD MEADOW'S STOCK FARM, Lake Mills, Wis.

Ormsby Jane King 2nd

Two Nearest Dams Average 35.64

Ready For Service

HERE IS AN OPPORTUNITY for some small breeder to get a sire of exceptionally rich breeding and splendid type at a very reasonable figure.

ORMSBY JANE KING 2nd was a year old June 24th. He carries a straight topline and is nicely marked.

HIS SIRE, ORMSBY JANE KING, is a son of the "Great White Heifer", Ormsby Jane Segis Aaggie, who has a record of 46.33 lbs. butter and 879 lbs. milk in 7 days.

AS A FOUR-YEAR-OLD she broke the world's records by producing 44.42 lbs. in 7 days and 183.16 lbs. in 30 days.

NO OTHER COW IN THE WORLD has ever made two records above 44 lbs.

ORMSBY JANE SEGIS AAGGIE has a three-quarter sister, Ormsby Jane Piebe, with 38 lbs. in 7 days.

ORMSBY JANE KING'S dam and two nearest dams of his sire average 37.16 lbs. butter in 7 days and 147 lbs. in 30 days. Nothing left to be desired on the sire's side of the pedigree, is there?

THE DAM OF ORMSBY Jane King 2nd is Moneta Pietje with a record of 24.95 lbs. butter in 7 days.

SHE IS A SISTER TO Agnes Pietje and Ilmata Pietje, both with seven-day records above 34 lbs. as three-year-olds. Another 3-year-old sister made over 31 lbs.

THE DAM IS SIRED BY Hillside Della Pender Pietje who has three daughters with records from 31 to 34.86 lbs. as three-year-olds and six three-year-olds averaging above 30 lbs.

THE NEXT SIRE IS Woodcrest Pietje with 60 A. R. O. daughters, over half of them having over 20 lbs.

SO YOU SEE both sides of the pedigree are full of great sires and producing dams and besides this Ormsby Jane King 2nd is one of the first grandsons of the "Great White Heifer".

WRITE US TODAY FOR pedigree and full particulars.

The E. C. Schroeder Farms, Box 576-H, Moorhead, Minn.

The Winship Farm Bulls

Are From Persistent Milking Dams

The 18 cows milking in my herd during April averaged 960 lbs. milk per day and 52 lbs. butterfat, each, for the month. This included heifers milking since last September, October and November. These dams represent the best blood lines of the Creamelle, Johanna, Beets, and Ormsby families.

Sired by Aaggie Burke Cornucopia De Kol

A 29-lb. bull, who traces back directly to the two greatest foundation cows of the breed, Spring Brook Burke and Aaggie Cornucopia Pauline. He is also closely related to the two champion 31,000-lb. milk cows.

Shipping Space Conserved

"Dairy products," says the Michigan College of Agriculture, "will feed the civilian population of our allies in conserve shipping space." The following table, showing the number of pounds edible dry matter in one cubic foot of shipping space required for various products and the cost per pound of the edible dry matter in these products, is used by the college to reinforce this statement:

	Edible Dry Matter No. lbs. in	Cost per pound
	cu. ft.	Cents
Sweetened condensed milk	33.8	21.1
Cheddar cheese	26.6	33.1
Whole milk powder	16.4	35.1
Skimmed milk powder	16.4	20.6
Canned roast beef	12.5	63.8
Canned corned beef	10.1	47.1
Canned salted pork	21.9	27.1
Eggs	26.1	52.1

HOLSTEINS

Are You a Member?

The Holstein-Friesian Association of America, the organized breeders of cattle of that name, was organized in 1885, then having 275 life members. Today it has nearly 12,000 members and is recording 80,000 Holstein-Friesian cattle per year, giving employment to 150 clerks, and has a reserve fund of nearly a quarter of a million dollars. It spends nearly $50,000 per year for publicity and extension work, promoting the interests of the breed and membership. The Holsteins are prosperous and popular.

Your Profit Makers

THE Moline Wide Spread Spreader helps you to get 100% profit from your live stock. It enables you to make the best of your barnyard manure, keep up the fertility of your land and increase crops.

It is strongly built and equipped with the best mechanical devices for spreading manure in the most modern and practical way. It is a low down, endless apron, wide spread spreader and is correctly built for long life, easy loading, quick and perfect work. The Moline Wide Spread Spreader is the result of many years' experience in building manure spreaders.

The manure is subjected to a second handling by the rear beater, which pulverizes it much better than a single beater can possibly do, at the same time spreads the manure in a wide sheet instead of leaving it in streaks.

See your Moline Dealer or write us for full information and spreader catalog. Address Department 18

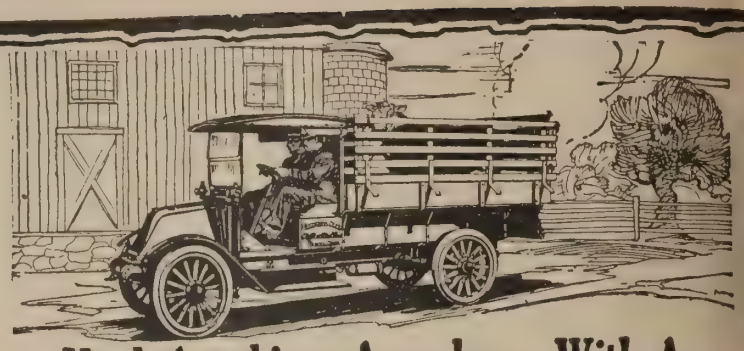
MOLINE PLOW CO., MOLINE, ILL.

Universal natural milker

Alternates, Like Milking With Hands

Milk Two Teats At A Time Two Times Every Day

Every farmer knows why he needs the time-saving, profit-increasing advantages of a milking machine, especially now with help so scarce.



But do *you* know why you need *this* milker? Do not confuse the Universal with any other. It has exclusive advantages—farmers everywhere testify to its superiority.

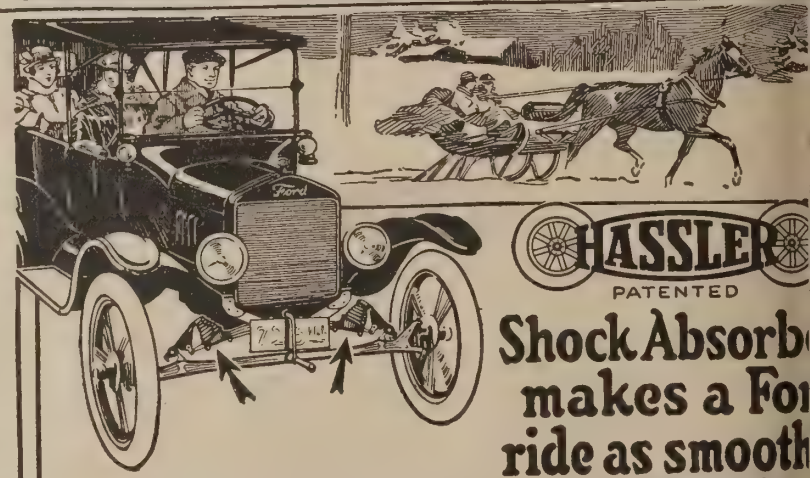
The Universal alternates, like milking with hands. While two teats are being milked, two other teats are being massaged, thus the action is stimulating, comforting and relaxing.

The cow *benefits* from the use of the Universal, and gives more milk.

Experience of farmers completely establishes the unquestioned superiority of the Universal. Write for catalog.

The Universal Milking Machine Company
407 Mound Street, Columbus, Ohio

Haul Anything, Anywhere, With An International Motor Truck



A FARMER never knows how much speedy hauling means to him until he buys an **International Motor Truck.** Ben Campbell, Minnesota stockman and farmer, says, "Looking back now I do not see how we ever got along without our International. We use it all the time."

The illustration shows Mr. Campbell hauling one of his famous pure bred bulls to market.

He uses the truck to haul livestock, farm produce, and supplies, and keeps it busy. Any farmer who owns an International will tell you that it is a necessary farm machine — one of the busiest pieces of machinery on the farm, and used more days per year than any other. New as the motor truck is to the farm there are already stories of thousands of dollars worth of crops saved by motor truck hauls when railroads were overloaded. With a motor truck a farmer can sell in the best market and make his deliveries as promised. With an International he can haul anything, anywhere, any time.

It will pay any farmer to investigate the **International Motor Truck.** We have a dealer, a branch house, or a service station somewhere near you, where the line can be seen, or we will send full information promptly if you will write us.

HASSLER PATENTED

Shock Absorb makes a Fo ride as smooth as a sleigh

A HASSLERIZED Ford glides along easily, smoothly, swiftly—just like a sleigh sliding quickly over a firm, even crust. There are no jolts, no jars, no upthrow, no sideway —practically no vibration. The car is easy to steer, safe to drive. It is just as comfortable as the old family sleigh filled with piles of soft furs.

Secure this comfort at no cost to yourself. Install a set of Hasslers and let them pay for themselves over and over again by adding to your tire mileage, giving you more miles per gallon of gasoline and oil, reducing the number and amount of your repair bills, and increasing the resale value of your car.

10-DAY FREE TRIAL OFFER

Write today for FREE TRIAL BLANK and we will have a set o Hasslers put on your Ford without a cent of expense to you Try them 10 days. Then if you are willing to do without them they will be taken off without charge. Don't ride without Has elers simply because someone discourages you from tryin them. Accept this offer and see for yourself. *Nearly a mil lion of the Patented Hasslers now in use.*

HOARD'S DAIRYMAN

A WEEKLY JOURNAL DEVOTED TO DAIRY FARMING

Volume LVI — FORT ATKINSON, WIS., NOVEMBER 15, 1918. — Number 17

tory of a Co-operative Milk Plant

H. H. LYON, NEW YORK

BRIDGE farmers have been in and have come off victorious. ave won by co-operation, the ethod by which farmers can ctories, and the method by hey can always win if the co- on is real and not divided. dge is in the midst of one of sest market milk supplies that e in New York State. For me this milk has been handled evaporating concern which in h of the summer handled as is 180,000 lbs. a day from the ding country. ssible to divert f this milk to ncerns at times mmonly it is

le arose on the July when the tors said they re milk than nted and that e first of Au- y would cut off er portion of l milk and take h as they chose This was per- nd the action on account of lity of any of lk furnished. ners are mem- the Dairymen's and the con- people said y would now he League lo- d went so far ay to certain t they now had ue right where ted it. They would cut off a the most loyal League mem- no market for the milk and e of some of the rest. The would be helpless and divi- disintegration must result. ok so, but the reckoning lefective as I will relate. nothing like pressure some- bring out the best qualities. armers of the vicinity are osperous, but not what busi- les would count well-to-do. e some who have an income ousand dollars and who pay e tax. There are others who iculty in meeting the ex- f the year and others who d and economize closely to ments as they fall due on gages. As a whole, I would the average farmer does not ving on his farm. By mak- ng I mean that he gets in- terest at five per cent, pays his running expenses, all labor employed, including the work of the wife outside the regular housework and the labor of the children, then allows depreciation at a fair rate, and finally gets a labor income of somewhere around five hundred dollars from which to live. This would be making a living from the business of the farm, and I am certain that the average farmer does not get it. Just how much he falls below this I cannot say but it may be about two hundred dollars. The average man has not far from $4,500 as his personal investment.

LARGE SANITARY CREAMERY MADE OF TILE WITH ICE HOUSE OF SAME MATERIAL, THAT COST A FEW YEARS AGO, WITH HOUSE AND LOT, $30,000. IT IS NOW OWNED CO-OPERATIVELY BY FARMERS

Under these conditions it will be seen that for a community to raise a good many thousand dollars for a creamery is a task that might try the best to accomplish. There were two creameries in the place that were idle, one lacked something in sanitation, but had considerable equipment and was offered at $8,000. It seemed difficult to raise the money even to buy this one. The other was a well-built creamery of brick tile, nearly new, and came on the market if taken promptly together with a large ice house, a good dwelling house, and a garage at $22,000. Most said that this amount could not be raised. At a meeting of farmers there was practically a unanimous vote to refuse the cheaper structure. Then the chairman asked how many felt that they could go down into their pockets deep enough to buy the better property. One hundred twenty-five men stood up. That did not mean, however, that the deal was completed. It is one thing to get a practically unanimous vote to do something and quite another to get the money to pay for the property. Subscription blanks had been prepared in advance, but when volunteers were invited to subscribe, only a few hundred dollars were put down. It was a discouraging moment. The most optimistic looked at the situation as hopeless. It seemed best to make the attempt, however, and a committee of twenty-five was armed with blanks and urged to do all possible to raise the money, or at least enough so that a mortgage on the property be floated.

It is one thing to secure a competent committee and another to get work done. A supervisor of the committee was secured and this was one of the most important items at that date. The ground had to be gone over more than once, and several had to raise their contributions. In an effort of this kind it is necessary to do a lot of planning and plans had to be made somewhat in advance. The one man in charge must be on his job, and there were times when he said the task was more than could be accomplished. In this particular case the man in charge of the soliciting committee is in politics locally. It was to his interest to make the deal go through, and later he threw himself into the game. That made it a success. No man subscribed over $650 but several put in $600.

There were several plans discussed in relation to organization, but the idea of paying dividends on the stock at five or six per cent was adopted, although no positive promise could be made of such dividends. Then the plan of one man one vote regardless of the amount of stock held was urged and adopted. This plan met with some opposition but it is doubtless the best in all such cases. The subscription list called for all subscribers to be League members and required them to patronize the co-operative association when started. In a few cases where money could not be had to pay subscriptions it was permitted to take ten cents a hundred on the milk delivered until payment was completed. After that the stock could be issued as in the case of cash paid in. It seemed advisable to accept notes in a few cases if desired although the law does not permit issuing stock on notes. The stock in such cases would remain in the treasury until the note had been paid. In the actual working out of the scheme notes were discounted at the bank instead of being delivered to the association. I mention these various methods because someone may wish to work out a similar plan some day.

Now about the success of the endeavor. Some three or four days before the first of August it was found that over $22,000 had been subscribed and practically $20,000 paid in. It was almost impossible to believe our eyes when counting the money. On the 29th of July we had to complete our contract with the owners of the plant and take it over. A paper had been prepared and signed by towards a hundred of our farmers guaranteeing the directors of the co-operative plant against personal loss beyond their individual share in case they had to borrow money to meet any payments. They hired $3,000 at the bank and not a cent of mortgage had to be placed on the plant. Partial arrangements had been made with a savings institution to take a mortgage for ten thousand or less, but farmers responded so well that this could be omitted. There was considerable equipment in the plant but a cooler was bought at $600 as it appeared that we might

Subscription Rates

Subscription in United States and Mexico $1.00 per year; 6 months, 50 cents; 3 months, 25 cents. Canada, $1.50 per year.

FOREIGN SUBSCRIPTIONS may be sent through Wm. Dawson & Sons, Cannon House, Breams Building, London, S. C., Eng., or their agents, including the news dealers and book sellers in all foreign countries.

Subscription agents for New Zealand—Bray Bros., Agricultural Hall Building, Dunedin, New Zealand. Also—The New Zealand News Co., 150 Wakefield St., Wellington, N. Z.

Subscription agents for Australia—Australasian News Co., 226 Clarence St., Sydney, Aust.

All foreign countries in the Postal Union $2.56 a year; not in the Postal Union $2.56, including postage.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of the Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome immoral and quack advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Ask For "Victory Flour"

Ask your grocer for "Victory Mixed Flour". Some grocers carry it and some do not, but ask for it anyhow—the demand may bring the supply.

The 80-20 ready mixed flour saves the trouble of measuring from two flour bins every time you bake. It saves thinking, too, for a mixture of wheat flour and substitute flour in the four to one ratio makes a sweet loaf or light biscuit.

Millers are trying to keep up with the demand for "Victory Mixed Flour", and women can help themselves and help the trade by keeping up the demand. These flours are plainly labeled with the ingredients in the order of their proportion. In many localities stores are carrying one or more of the following flours:

Mixed wheat and barley flour: Four pounds of wheat flour to one pound of barley flour.

Mixed wheat and corn flour: Four pounds of wheat flour to one pound of corn flour.

Mixed wheat and oat flour: Four pounds of wheat flour to one pound of oat flour.

Mixed wheat, barley, and corn flour: Eight pounds of wheat flour to one pound barley and one pound corn flour.

Mixed wheat and rye flour: Three pounds of wheat flour and not less than two pounds of rye flour.

Whole wheat, entire wheat, or graham flour or meal: To contain at least 95 per cent of the wheat berry.

"Victory Flours" conforming to these regulations may be sold without substitutes but at no greater price than standard wheat flour.—U. S. FOOD ADMINISTRATION.

He who hath health hath hope, and he who hath hope hath everything.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

Farmer's son:—"How do you like milkin' cows?"

Farmerette—"I like it well enough but I can't get the cows to look at it in the same way."

The Little Miss From Town

There's somethin' missin' 'round th' place;
A loneliness I can't explain.
The absence of a fair, sweet grace—
A voice I'd like to hear again.
I wander out into the fields,
And tell my troubles to th' herd.
But, nothing that the old farm yields
Can sound the beauty and the word.

At milkin' time, I'm lonely too;
My mind is never on my task.
There's nothing I can see or do—
There's nothing I can seek or ask
That fills the void—that measures up
To what I somehow seem to miss.
Ah, overflowing is my cup
With retrospective times likes this!

What is it? Why this discontent?
The cows are as they used to be.
The chores the same—yet I invent
A grouch that is no part of me.
Perhaps you've guessed! Oh, crushing gloom!
And dreams of girls that you have met!
They fade like summer-time perfume—
I miss a certain farmerette.

There are approximately 100,000 girls and boys enrolled in "Pig Clubs". Looks as if we could root our way across the Rhine if the airships can't make it.

What They Say of Dairying

The Artist:—"Profit Painted in Glowing Colors."

The Carpenter:—"A Safe Way to Build a Fortune."

The Banker:—"Every Cow is another Deposit."

The Aviator:—"On a Higher Plane Than Ever Before."

The Chauffeur:—"A Straight Drive to Success."

The Jeweler:—"Quick Returns in a Golden Setting."

The Baker:—A Fine Way to Make a Bunch of Dough."

Buying the Holstein

"Had she much sickness?"
"Well, a little this winter."
"Anything wrong with her feet?"
"The left fore has caused a limp at times."
"Good milker?"
"Not quite up to standard—no."
"Ever won any prizes?"
"Nope."
"Will she kick while being milked?"
"Never did it in her life."
"Good—that's enough. I'll take her fer spot cash."

The Little Feller on th' Farm

The little feller's eyes are bright,
The healthy cheeks are red.
And, oh, but how he sleeps at night,
Tucked in his little bed.
(But milk his diet is, I guess,
Touched off with heaps of cream.
Th' herd has helped to build a man,
Along a very rugged plan,
Of which all mothers dream.)

The little feller's stride is strong;
His voice is sweet and clear.
He sings the whole gay day-time long
And songs one loves to hear.
(But, oh, he drinks a lot of milk!
He has his private cow!
And when he eats a slice o' bread,
With golden butter wealth it's spread,
Let mother show you how!)

The little feller's kiss is sweet,
His hug is mighty tight.
He's active on his toddling feet;
His big blue eyes are bright.
(But, Gee! he's sipping all th' while,
Some dairy cow's precious brew.
And, so, it paints his cheeks—and seems
To bring him happy, smiling dreams,
Of things th' fairies do.)

Don't Wait till next
spring to get your new

County Agent Work in Shawano County, Wis.

UNLOADING 60 TONS OF LIME ORDERED FOR FARMERS WITH SOUR LAND
his is only one of several such cars. Lime has made possible successful growing of 15 times as much alfalfa as was ever grown in the county before. The agent also procured a lime spreader and inoculation for this farmer.

"A SILO ON EVERY THIRD FARM" WAS THE MOTTO IN A CAMPAIGN THAT ERECTED 192 SILOS; NOW THE MOTTO IS "A SILO ON EVERY FARM"

OUTSIDE OF A MILK HOUSE PLANNED BY THE COUNTY AGENT. "IN STONEY COUNTRY USE STONE"

RT COURSES IN AGICULTURE WERE HELD ALL VER THE COUNTY LAST WINTER. THESE BOYS CAME IN 5 MILES AND MORE TO ATTEND

THIS BULL CALF AT 15 MONTHS OLD WEIGHED 1,300 LBS. He was purchased by the county agent for Frank Steffle. His grandam produced more milk in one year than any other cow of the breed. In one year 20 scrub bulls on as many farms were replaced by pure-bred sires.

SEVENTY DEMONSTRATIONS, SHOWING FARMERS THE GOOD AND POOR POINTS IN THEIR STOCK, WERE HELD

S MACHINE TREATED 5,000 BUS. OF OATS FOR SMUT
ne farmer had 47% of smut on his field last year. This tment cost him 28 cents and saved him $400 worth of oats.

AN estimate at the end of the first year of county agent work in Shawano County, Wisconsin, showed that $12.90 in cash was returned to the county for very dollar expended for the work. This did not include any work that did not actually bring in cash to the farmer. For instance, a pure-bred bull added to a herd of grades and a scrub bull sold from the herd may be of immense value to the farmer, but cannot be estimated in cash.

The one thing that brings me most satisfaction personally is that we are growing a little alfalfa on nearly one-fifth of our farms and the great cry even a year ago was that we could not grow alfalfa. Lime, inoculation, and the use of Grimm seed has helped us greatly, and the big stands that did not winter-kill are stimulating enthusiasm as no words could. Mr. Herman Naber of Cecil has reported that when he ran out of clover hay in the winter and substituted alfalfa hay without changing any other condition, his cows increased their milk flow one-fourth.—MERTON MOORE, County Agent.

"Which Milking Machine is Best?"

C. LARSEN, South Dakota College of Agriculture

everyone who contemplates purhasing a milking machine the 're question is foremost, and it is estion frequently asked.

here are only three classes of peowho would, and who are in a poin to, answer the above question ctly. One class would include e who contemplate buying a mae and who have been studying different machines, and have de-d for themselves which is the best hem under their conditions.

nother class would include those have been operating a certain hine with success for some time. ich men form their opinions en-y from the work of the machine, such opinions are valuable.

he third class includes the agents people who are connected in any with the selling and manufacture he particular machine. These men, ourse, are believers in their own ing machine. They would not ufacture it and they could not rtise and sell it unless they be-d it to be the best.

hich milking machine is the best? To say that it can not be answered correctly would not be proper. There is a best machine for particular herds, for certain barn surroundings, and for certain operators. There are differences in the various machines, but on the whole the standard milking machines are similar in effect.

Personal Choice Important

There are certain things that every dairy farmer can decide for himself:

First, the price. If a person has only so much money to put into a machine and his herd is not large, then the price is a deciding factor.

Second, shall it be a pipe line machine? If so, shall it be a double pipe line employing both pressure and vacuum, or shall it be the type that employs only vacuum?

Third, shall the milking machine be of the kind having the universal cup, or one sized cup for all cows; or shall it be a machine having cups of different sizes to fit the different cows?

Fourth, should the milking machine be a single unit machine, or should it be of the double unit kind; that is, should the machine milk one cow into one pail at a time or should two cows be milked into the pail at one time?

Fifth, if the double unit type is selected, should there be a partition in the pail to separate the milk given by the two cows?

Sixth, shall it be a machine having a pulsator that produces release and suction of equal lengths, or shall it be a machine having a pulsator whose duration of release and suction strokes may be regulated?

Knowledge of Herd Conditions Vital

Most dairy farmers have individual views on these questions. No one else can decide them as well as can the prospective users. If some one else should render a decision the owner may later decide that another type selected by a neighbor would prove more desirable.

At any rate, the person who has milked the herd of cows by hand regularly, and who is intimately in touch with each cow, and who understands his surroundings, is in the best possible position to select the machine that will milk that particular herd most successfully.

Study of the Different Machines

The dairy farmer who contemplates buying a milking machine should make it a business to study the different machines. He should visit the different fairs and the different dairy shows and make milking machines a study, and while doing so keep in mind his home herd and home conditions.

The results of such study will reveal much light of great help in the future successful operation of the machine finally chosen.

No matter how much knowledge and experience a person has with the different milking machines with a certain herd and under certain surroundings, he can not, as a deduction, point out that a certain milking machine is best. If such an experienced milking machine operator could have the opportunity of milking the different cows and become intimately acquainted with the different cows in the particular herd; if he could become familiar with the men who are to operate the machine; and if he could know the barn surroundings and facilities for caring for the milking machines and the personal likings of the owner, then such a person could come much nearer selecting the

(Continued on page 571)

How Strictly Vegetable Diets Influence Growth and Reproduction of Swine

E. B. HART, Wisconsin Experiment Station

THERE have been a number of experiments made in different parts of the world to determine whether animals can grow on rations compounded strictly from vegetable sources. The more modern disclosures that vegetable proteins may be essentially different in structure from animal proteins and that seeds probably have a lower concentration of fat soluble vitamines than certain animal products, would lend support to the idea that strictly vegetable diets might be found insufficient for normal growth and reproduction. The curious fact, however, that the animals which normally eat mostly vegetables appear to grow and reproduce on vegetable diets would indicate that there were certain factors not understood in the problem; for example, guinea pigs, sheep, cattle, etc., often make 80 per cent of their growth from strictly vegetable sources.

In our experimental work swine have been used. A grain mixture made up from oats, corn, middlings, and oil meal, with the proper protein intake, and same mixture modified by additions of skimmilk, meat scraps, or alfalfa meal, have been made the basis for these studies. Distilled water has been used in some cases, while in other cases natural water was used. Sugar beets have been added to the diet two or three times a week and alfalfa hay given the same number of times, involving, of course, only a very moderate consumption of this material. On strictly vegetable diets (practically a grain diet) growth ceases with either distilled or natural water after the animals have reached about 100 pounds and been on the ration about three months. They become miserably poor in physical appearance, loss of weight sets in, and proper correlation of the muscles disappears. They lose their ability to get up on their feet, except with very great pain, one predominating characteristic symptom being an attempt to walk on the knees. The microscopic examination of the cord of such animals shows a marked swollen condition, with the motor cells surrounded by considerable serous fluid and the entire motor cell markedly contracted. The microscopic picture of the cord is not unlike that of beri-beri which has been a common disease among the people of the orient, brought on by too excessive consumption of polished rice.

Where skimmilk has been added to the diet equivalent in solids to one or five per cent of the solids of the ration great help to the animals followed, but perfect nutrition did not result. These animals likewise passed into a condition very similar to those confined to the grain ration. It should be understood, of course, that these animals were confined in pens large enough for ample exercise, but wholly restricted to the known food mixture. With other farm animals, such as the chicken, we have had perfect success in growth where milk solids constituted 10 per cent of the solids of the ration. It is, therefore, not unlikely that had we used a larger proportion of milk we would have been more successful with swine than these earlier experiments indicate.

Where tankage has been added we have had normal nutrition. With tankage constituting but 1 per cent of the solids of the ration growth has been normal, the animals showed early oestrum and reproduced. These animals started at an initial weight of about 75 pounds. On a strictly grain diet the animals grew from 50 to 100 pounds, while on the grain diet plus the small amount of meat (1 per cent) they grew in the same time to 250 pounds. With 5 per cent of tankage in the diet normal growth and reproduction also resulted. The rate of growth where the grains were supplemented with skimmilk or tankage was a normal one, in some cases even being above the normal.

When the grain diet was mixed, so as to contain 15 to 25 per cent of alfalfa meal, growth and physical soundness followed. In the experiments where the sugar beets and alfalfa hay were thrown into the pen the animals consumed only relatively small quantities of these materials and for young growing animals such practice is not the best. When, however, they are forced to take as high as 15 per cent of the roughage the improvement that follows may be attributed to the fact that the animals were forced to consume a larger mass of this material. These animals receiving the alfalfa meal either in proportions of 15 per cent or 25 per cent of the ration grew very well, but their rate of growth was not up to normal. They remained physically sound, showed no signs, after two years on the ration, of physical degeneration and have produced normal offspring. Their ration consisted of 20 parts of corn, 20 parts of oats, 20 parts of middlings, 10 parts of oil meal, 25 parts of alfalfa meal, and 5 parts of corn starch. In other lots where a ration of 50 parts of corn, 20 parts of peas, and 30 parts of alfalfa were fed, physical soundness was maintained and reproduction has occurred. The curves of growth, however, are somewhat below the normal rate.

These experiments indicate that skimmilk, while furnishing better protein than the grains and improving the salt mixture of the diet very materially, is somewhat constipating in its effects and over a long period of time would not be conducive to normal growth and reproduction in the amounts used in these experiments. By using a somewhat larger quantity of skimmilk, providing thereby a splendid protein mixture and introducing more salts, the constipating effects can be overcome and the continued well being of the animal maintained. The crawling on the knees and physical degeneration of such animals, we believe, have their primary origin in a constipating ration.

These experiments indicate, however, that meat scraps or tankage carry all the necessary supplementing qualities for the grains, improving them through the introduction of better proteins, and especially through the introduction of bone meal or calcium salts. It does not seem probable that the mineral mixture of a strictly grain diet is the only inadequate factor, but that poor proteins and probably a lower quantity of fat soluble vitamines are two additional factors contributing to the failure of strictly grain rations. The introduction of tankage brings into the ration these factors and thereby modifies the inadequacy of the diet. The wonderful effect of the extra supply of calcium salts as introduced with tankage is of very great importance. It does not appear to be needed as a building material, but possibly serves its usefulness in regulating some intestinal function with which we are as yet little acquainted. It is indeed probable that the grains are somewhat deficient in fat soluble vitamines, excepting possibly corn, and when a roughage such as alfalfa is introduced and the animal forced to consume a large mass, as when 15 to 25 per cent of alfalfa constitutes the ration through intimate mixing with the grains, an additional supply of fat soluble vitamines, salts, especially calcium salts, and somewhat bulky intestinal residues are provided. These results would then explain why animals which naturally eat mostly vegetables can succeed on vegetable diets, while animals which naturally eat meat will not succeed when strictly confined to the grains; why pasture and forage are helpful in the successful management of swine; and why, for growth, grains or a mixture of grains under strict confinement will be a failure. They must be supplemented with either a plentiful supply of skimmilk, a supply of tankage, or with the leafy portion of the plant. Because of the bulkiness of roughage and its poor proteins it alone as a supplement to the grains will not give a maximum rate of growth. Only when the combination of grains and roughage has its protein mixture improved by the use of skimmilk or tankage will the maximum rates of growth be attained.

It might be inferred from the above discussions that the tissue changes in the cord of those animals going to pieces on grain diets were brought about by a low concentration of fat soluble vitamines. This probably is not true and other factors undoubtedly enter into the degenerate causes. In most of these rations wheat middlings occur in some cases as high as 30 per cent. We are led to believe from other experiments that the wheat embryo carries some poisonous material which interferes with the normal development of animals and specifically disturbs reproduction. It is, therefore, probable that in rations carrying the wheat embryo (middlings) success was only obtained when all the factors for growth were very perfectly adjusted to the body, making it possible for the animal to resist the poison of the wheat embryo. With better proteins, better salt mixture, and an abundance of fat soluble vitamines, all factors of relatively low efficiency in a strictly grain diet, it might become possible for the organisms to destroy or overcome the depressing action of the poison of the wheat middlings.

We believe, however, that the primal cause of physical degeneration of these animals on a strictly grain diet is of intestinal origin and due primarily to a poor salt mixture which causes retarded motions of the intestine followed, consequently, by constipation and absorption of poisonous materials from the intestine. An animal confined strictly to corn which, so far as we know, contains no poisonous material, will ultimately fail to grow and likewise pass into very poor condition. We have had animals pass into this condition when given wheat rations to which was added 2 per cent of butterfat, the ration containing, therefore, plenty of fat soluble vitamines. The cord showed the same changes as that from pigs receiving nothing but the grains.

It is, therefore, clear that omnivorous such as swine, can be reared on strictly vegetable diets, but not by grain alone, and the great function of the stem and leafy portion of the plant such as the summer pasture, or the winter clover or alfalfa, is to maintain a normal and healthy condition of the digestive tract.

We have some preliminary results on the maintenance and reproduction of swine on grains alone. It appears possible to maintain swine and have normal reproduction when confined wholly to the grains but only after the animal has reached maturity; but whether there should be much protein of vegetable origin in the ration, or grains from special sources, is still a matter of experiment.

Feeding Value of Skimmilk

Experiment station trials on 7 pigs show that when properly fed as a supplement to cereal grains (say 1 lb. grain to 3 lbs. milk), 100 lbs. skimmilk will replace 28 lbs. of grain that would otherwise have to be fed without the skimmilk. Using this as a basis the Michigan College of Agriculture figures out the relative value of 100 pounds of skimmilk with grain at varying prices:

Cereal grains Price per 100 lbs.	Relative value of 100 lbs. skimmilk
$1.00	$ .23
1.25	.35
1.50	.42
1.75	.49
2.00	.56
2.25	.63
2.50	.70
2.75	.77
3.00	.84
3.25	.91
3.50	.98
3.75	1.05
4.00	1.12
4.25	1.20

Use your gifts faithfully and they shall be enlarged. Practice what you know, and you shall attain to higher knowledge.—ARNOLD.

Aims of a higher order may not be entirely fulfilled and yet at that may often prove more valuable than those of a lower order entirely fulfilled.

TWO ASSOCIATIONS THAT GO HAND IN HAND

Bull associations are getting a new lease of life and are now being organized on a more permanent and satisfactory basis. Cow testing associations have proved their worth, but the scarcity of young men has made it difficult to meet the demand for new testers. A representative of the 18 woman testers in Wisconsin came to the National to show and to tell that women can do the work satisfactorily. Her booth was one of the best patronized and she was kept busy answering questions and demonstrating the work of a cow tester.

Directions for Making Cottage Cheese on the Farm

COTTAGE cheese is one of the few varieties of cheese that can be profitably manufactured on a small scale by the dairy farmer. Little additional equipment will be needed other than that which can be made on the farm.

The following equipment will be needed: Metal stirrer, or large tinned spoon; measuring cup; dairy thermometer; cans, about 8" diameter, 20" deep, made of heavy tin. These will hold about 3 gallons of milk; draining racks (one for each two cans); press boards (one set of two for each two cans); and junket tablets.

The cans may be made by the local tinsmith, or purchased from dairy supply houses. The draining rack and press boards can be made on the farm. They should be of cypress, white wood, maple or clear pine, free from pitch or resin.

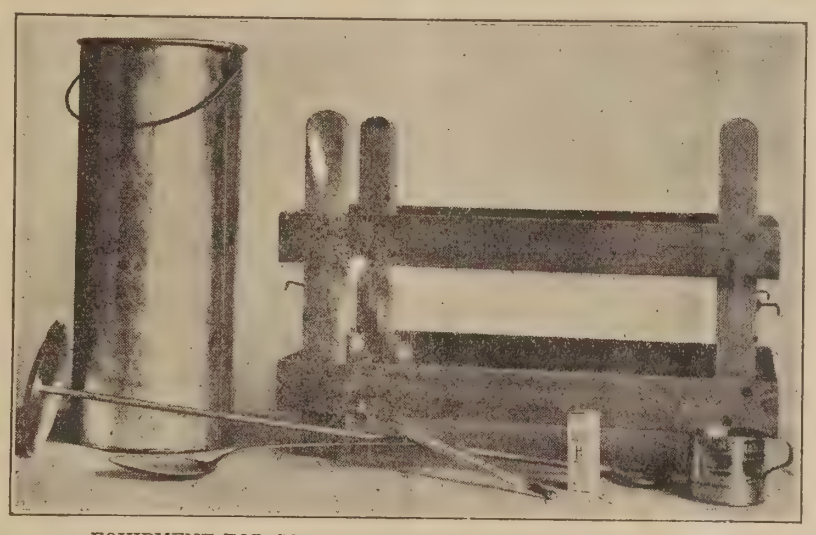
For the draining rack which is 12" wide, 24" long, and 14" high, the following pieces will be needed: 4 pieces for posts, 2" x 2" x 14"; 4 pieces for side rails, 1" x 2" x 25"; and 4 pieces for end rails, 1" x 2" x 11". To make the press boards, the following will be needed: 4 pieces, 1" x 2" x 11"; 18 pieces, ½" x ¾" x 11"; and 8 pieces, ½" x 2" x 2". The strips are placed flatwise and spaced ½" apart.

The Milk

It is necessary to have fresh, clean skimmilk in order to make cottage cheese of high quality. Milk that has become slightly sour may be used, provided that no bad flavors or odors are present, but the quality of the cheese may be inferior. Either separator or dairy skimmilk may be used. Unless the skimmilk is to be made into cheese as soon as separated it should be cooled to 50°F. or lower and held at this temperature until ready for use. A good grade of cottage cheese can be made of the skimmilk from milk to which water has been added to hasten separation.

Setting the Milk

Place the skimmilk in a clean tin can or a "shotgun" can, and set in a tub or can of either hot or cold water as needed, to bring the temperature to 75°F.



If the milk is sweet, add ¾ cup of clean sour milk or buttermilk per gallon of skimmilk. Dissolve ½ of a junket tablet in 4 tablespoonfuls of cold water, and add to the milk. Stir thoroughly to insure uniform distribution of the dissolved junket tablet and the sour milk or buttermilk through the whole.

If the milk is sweet and no sour milk or buttermilk is available, let the milk stand at 75°F. for five or six hours before adding the junket tablet.

The milk must be kept at 75°F. until firmly curdled (coagulated). This can best be done by placing the can of milk in a wooden tub or a half barrel and surrounding the can with water at 75°F. A double boiler may be used. Do not disturb the milk after setting until ready to drain. Milk set in the afternoon should be ready to make up the next morning. Milk set as above should coagulate in twelve or fifteen hours.

Draining the Curd

The curd is ready to drain when the milk has become firmly curdled so that a very little whey appears on top. The object of draining is to remove the whey. Pour the curd into a cotton or cheese cloth bag, breaking the curd as little as possible. This pouring can best be done by the use of a draining rack. Place the cloth over the rack and fasten it at the corners by hooks. Slide the curd out of the can as gently as possible to avoid breaking the curd. After the draining has proceeded for about 15 minutes, raise and lower the draining cloth at the corners and sides, first one corner, then the other, in order to loosen the curd from it and hasten the draining. The draining may be completed by tying the corners of the cloth together and hanging up or pressing. By the former method it will require from 12 to 24 hours to drain out sufficiently. The curd at the outside dries out faster than that in the center and may form lumps. This can be prevented by kneading the curd slightly two or three times during the draining process.

EQUIPMENT FOR COTTAGE CHEESE MAKING ON THE FARM

PRESSING THE CURD

The draining process can be finished by pressing in 30 or 45 minutes. The press consists of two slatted press boards made up of three-fourth inch by one-half inch strips placed one-half inch apart. Tie the bag of curd securely and place between these slatted pieces. Press by placing on top of the press boards a pail filled with either water, bricks, stones, or sand. Usually 25 lbs. pressure is sufficient. Two or three times during pressing the position of the curd should be changed slightly to prevent uneven drying. The pressing can be done very nicely by placing the bottom press board in a shallow pan, thus saving the whey. Press until the curd is dry enough so that it will not leak whey after salting. This point can be determined by experience alone. Cheese containing too much moisture will not keep well. If the cheese is pressed too dry it may be moistened by adding a little cream or milk before using.

Salting the Curd

Salt is added to the cheese to improve the flavor, the amount depending upon the individual taste. Usually 1 to 2 teaspoonfuls to the curd from one gallon of milk, or 2½ to 4 ounces to 10 lbs. curd is sufficient. All lumps of salt should be broken up before adding to the curd. When adding the salt, place the curd in a pail or pan, add the salt, and mix with a butter ladle or spoon just enough to thoroughly distribute the salt. Too much mixing causes the cheese to be sticky, pasty, or salvy.

Adding Cream

The flavor of the cottage cheese may be improved by adding a little sweet or sour cream. The cream may be added at the same time as the salt, thus making one mixing do for both. Heavy cream added at the rate of one-half pint to each 20 lbs. of cheese will improve the flavor greatly and give the cheese a mild creamy taste. More cream may be added if desired.

Preparing for Market

Cooling. Place the cottage cheese as soon as made in a cool room or refrigerator and keep cold until used. If stored in a refrigerator at 40°F., it will keep in good condition for several days.

Packing. Cottage cheese may be marketed very satisfactorily in single service containers. These containers are made of wood pulp treated with paraffin to prevent the paper from softening. They can be secured in 4, 8, 10, 12 ounces, or larger sizes. They make a neat package and the smaller sizes are very convenient for retail trade in grocery stores and meat markets. The name and address of the manufacturer or other advertising material may be printed on the containers.

Yield. 1¼ to 1½ lbs. of cheese will be secured from 1 gallon skimmilk, or at the rate of 15 lbs. to 18 lbs. of cheese per 100 lbs. of skimmilk.—Extension Circular 55, Massachusetts Agricultural College.

Butter Dealers Found Guilty of Profiteering

News despatches report that on October 25 the federal food board for New York City ordered eight wholesale dealers in butter and eggs to close their establishments for a week, following their conviction on charges of profiteering in butter. The dealers were also ordered to refund all over charges to customers and to display posters announcing their offense. Under Food Administration rulings, butter, both storage and fresh, must be sold at prices not to exceed a stipulated margin over cost, and dealers are not allowed to profit by abnormal advances in market quotations.

Does Education Pay?

The short course in agriculture was established at the University of Wisconsin in 1885 under the direction of Dean W. A. Henry. It was born under the discouragements of ridicule and lack of interest, but it long ago justified its establishment. Today it boasts of 5,012 students who have attended these courses, and they are well distributed over the United States. But, does it pay? The college answers this question in its announcement for next year's work:

"That Short Course training pays is shown by the fact, based on 825 records, that the Short Course graduates are making labor incomes—the amount left over to pay for the farmer's labor after paying all expenses and deducting 5 per cent interest on the total investment—of $739 a year, as against only $632 made by common school graduates; and the Short Course men live in more expensive houses; more often have modern bath equipment, lighting systems, and furnace heat; and one-fourth of them, as against one-fifth of the grade school graduates, have automobiles.

"The equipment of the College of Agriculture is thoroughly modern and practical. The buildings stand for the best types of farm architecture and the ideas represented in their construction can be readily adapted to the average farm. For years attention has been given to securing breeds of live stock that will be representative and true to type. The instruction in the short course is given by the regular members of the staff of the University, and the students have every advantage offered the students in the other courses.

"The short course consists of three terms of five weeks each. Students may enter at the beginning of any term. The course is so planned that a definite unit of work is completed during each five-week period. The course will start the middle of November and the studies for the first term (five weeks) will be completed at the time of the Christmas holidays. The second term will start after the vacation and the work of this term will close at the end of the first week in February. The third term will begin the second week in February and close the middle of March. The course will be completed in good time to permit the students to return to the farm to begin the spring work.

"Under this new plan Short Course students will concentrate upon a few subjects for each term and complete them before taking up other subjects. Instruction is given by means of lectures, recitations, laboratory practice, demonstrations, and conferences. Opportunity is given for students to secure answers to individual questions, which makes the work practical and helpful to them."

Buy Direct

From Dairy Supply Headquarters When You Need

Dairy Supplies or Equipment of Any Kind

We are manufacturers as well as dealers and we are therefore in a position to give the dairyman the very best value for his money considering the high quality of goods.

The following are some items selected from our big Dairy Catalog. They are pieces of equipment which every dairyman can use to advantage and are sold under The Creamery Package Mfg. Company's guarantee of quality.

New Elgin Pattern Milk Can, 10 Gal. Size	$6.15
Ideal Milking Pail, 10 Quart Size	$1.25
Chapman Changeable Strainer	$1.75
Jupiter Can Brush	.40
Pail Balancing Scale 30-lb Capacity	$2.85

Complete description of these and all other equipment in our catalog will be sent on request. Send your check for items you want and they will be shipped direct to you.

Water and Light in the Home EITHER OR BOTH

The Milwaukee Water and Light System gives you the same conveniences found in city homes. A turn of the faucet brings a plentiful supply of water—a turn of the switch brings a flood of light. No running to the pump. No fussing with dirty lamps.

Only one engine required. The same engine that supplies the air pressure for the water system charges the storage batteries for the lighting plant and furnishes power for cream separator, churn, washer, shop and home.

Write for Catalog. Let us tell you how economically you can add a lighting plant to your water system or a water system to your lighting plant, or if you have neither one let us tell you about both. This information is free.

The War Cripple in the Dairy

W. M. HUSSIE, NEW YORK

THE United States government certifies that of every million American soldiers in the field for one year ten thousand will be so disabled as to preclude the possibility of them following their previous occupations. They will require special training, calculated to prepare them for gainful employment in the post-war period. When trained, they will be skilled workmen, their impaired physical powers compensated for by superior knowledge along their chosen lines of work. They will be fitted to secure, and to hold, positions in competition with normal men, because they will possess the much desired "know how". Employers will welcome them for the reason that their employment will be based not at all upon charity, or the glamor of service in the army, but on merit.

According to the vocational rehabilitation act recently enacted by Congress, those disabled in the military and naval forces of the United States have been placed under the joint authority of the Surgeon General of the army and the Federal Board for Vocational Education. The Surgeon General has jurisdiction from the time the person is injured until he is restored to good physical condition, when he receives his honorable discharge from the service. The federal board then offers him vocational re-education and training which will enable him to return to useful active employment, and the U. S. Employment Service will find him a job.

The French, British, Italians, Germans, and Austro-Hungarians have blazed the trail. The Red Cross Institute for Crippled and Disabled Men of New York, a national activity of the American Red Cross, collects from the clinics and re-educational institutions of the world the results of the many experiments carried on. It, also, itself experiments with men of various disabilities, having accumulated much valuable data at first hand. The benefits of this work will be felt by American industry and agriculture throughout this generation.

In France between sixty-five and seventy-five per cent of those re-educated for profitable employment are farmers, although of all workers in the list of gainful occupations in France before 1914, the farmers furnished only forty per cent. There is no doubt, whatever, that the French farmer has furnished almost double his quota in filling the ranks of the dashing French infantry. The French farmer, one may almost say, has saved France in war, as he supports her in peace. In the United States before the war, roughly, thirty-six per cent of all our male population over the age of ten years were farmers. Since our draft applies to all citizens alike, it is safe to estimate that thirty-six per cent or more of all our soldiers and sailors are recruited from the ranks of the farmers and sons of farmers.

The experience of our neighbor, Canada, in re-educating disabled soldiers, shows that 2,077 men taking training for employment only some six per cent took agricultural wor in animal husbandry, farming, far tractor operation and care, garde ing, and horticulture. In other word out of 2,077 men only 131 elected return to the soil. And yet, for mar types of war disabilities a return the out of doors life indubitab means a guarantee of life and healt It is hoped that the Federal Board Vocational Education, (the gover ment department charged with t training of our disabled soldiers a sailors) will produce a much more i pressive percentage of sturdy, re-ed cated American fighting men return to the soil.

Re-education, the science of ada ing disabled men to serious occup tion, has made rapid strides, und the spur of necessity, since 1914. is advisable for all of us to form hard and fast preconceptions as to t industrial worth of any disabled ma until we realize what has been complished. It may seem prepost ous to assert that men, for examp with leg or arm amputations can s

cessfully engage in farming or d ing. There are, however, hundre instances where men so handica are actually doing such work ent successfully. Take, for illustrati case of a farm laborer, with a leg putation. The reader may re imagine that complicated, arti legs, costing hundreds of dollars, hardly prove practicable for wo on a farm, although very usefu walking about a city. That is and the re-educated British or F farmer or dairyman works we the ordinary "peg-and-bucket" "peg" leg. But, it will be obje while this sort of leg is very we hard ground, how can the man on, or traverse soft, or marshy The French have provided a wooden pad, clamping on the e the peg leg. This provides a pe ly workable apparatus by mea which the one-legged, or, for matter, the legless farmer equally comfortably and we marshy or hard ground. Agai training such a man in the u farm machinery, so that he fin specialty in operating it, the ve cessity of working on the soft g can be eliminated. These are on of numerous methods of g

ound a single difficulty. There is no stacle which, in a proper case, the voted men who have given their skill d knowledge to the education of the sabled soldier have not and cannot rmount. It may be stated, with comete assurance, also, that there are deed few farms or dairy operations at an ingenious, determined, onemed soldier can not master.

Forecasting the American establishents, one may glance at the institun provided by the new dairymen France, who have been forced to rn from the trenches to the soil by ason of wounds received in service. -educational schools for French ldiers for training in butter and eese making have been established Manirolle, Poligny, Surgeres, and rillec. The list of students has not en large, but some fifty have been rned out, it is estimated from the ta at hand, and are now equipped earn about fifty dollars a month, cording to the state of the market. is, it should be remembered, is a ench wage. The most seriously disled men are not received in these ools, as considerable activity is reired and the aim is to turn out, in ery branch of re-education, above , capable men. Many of the gradtes are acting as inspectors of milk. ose electing to specialize in butterking are able to begin work at ges of about twenty-eight dollars a nth, with opportunities to increase ir compensation as they become ll better acquainted with the work d the demands of the market. The -operative Dairy Association of arente and Piotau has worked with schools, generously guaranteeing alary of fifteen dollars per month graduates who are native to the partments of Charente-Inferieure, ux Sevres, and Vendee. This is ind practical co-operation with the orts of the government of France replace in productive occupations men who have risked all for the tion. It should be noted that the ability compensation received by ry French soldier is paid regards of his after-required earning wer. His wages have no effect atever on his pension or compenion. Our government has officially opted a like provision. Our allies' perience shows that all such train- institutions should be situated r adequate medical centers, that men's physical wants may be atded to while they are receiving ir technical training.

Our government has determined to fit by all experiences of foreign ntries. The Surgeon General of army, for example, has prepared agricultural training in connecn with hospitals of the army. It is less, obviously, to train men, howr well, if their physical needs are attended to until the man is comtely recovered, however long a e the process may require. And to illustrate this provision, the lter Reed Hospital in Washing- has equipment for agricultural ining for the disabled soldier dur- his convalescence.

t is expected that many soldiers m the farm will be apt to fancy the vn pursuits after recovery, and k training for them. This tenncy, except in extraordinary cases l, it is believed, be gently but firmcombatted by the medical and vo- ional authorities. The requirents of the farm must not be overked at any time.

All re-educational authorities hope t American re-education will bear part in populating our farms with manly, sturdy men who come k from the war, impaired, it may to a degree, physically but with rt intelligence, and unimpaired fidence and ability to take up the rk of the dairy, the farm, and the est.

Southeastern Fair

HOARD'S DAIRYMAN:—The Southeastern Fair held annually at Atlanta, Ga., was held during the week of October 14—19, and in spite of the influenza scare was declared by those in charge to be a success in every particular.

The most notable feature of the fair was its live stock exhibit, particularly of swine. More than 2,000 pure-bred hogs were shown, most of them being Georgia grown. Exhibitors from the North and West were present to compete for the fairly good premiums. The honors were taken by Georgia hogs, and what is most surprising, a large number of the hogs belonged to pig club members. The winners in the bunch were bred, for the most part, during the past three or four years by Georgia boys under the guidance of James L. Downing, the state agent of the College of Agriculture and of the United States Department of Agriculture.

Next in point of numbers in live stock was the beef animal exhibit, mostly Georgia bred. There were 16 Hereford exhibitors, 6 Shorthorn, 3 Aberdeen-Angus, and 1 Poll Durham, most of these being herds. It has been only within the last few years that live stock of the beef breeds was shown at southern fairs except in a very limited way. Now, however, they are always seen in large numbers and there is always a great deal of interest manifested. The cotton farmer who has begun to diversify his agricultural crops has taken to the beef animal with a good deal of favor and has been especially interested in pure-bred animals. As a consequence some very fine breeding herds are being built up in the South.

No small amount of interest centered in the dairy exhibits. Here, too, were found some classy southern bred animals out of well selected strains of the country. Southern dairymen have been fortunate in getting some very good dairy animals from various sources and have exercised very creditable care and shown good understanding in breeding.

Three Jersey herds were on exhibit. The Jersey is quite a southern favorite. Two Guernsey herds were displayed. This breed is catching on in the South and there is a widespread belief that it is going to prove well adapted to southern conditions. Four Holstein exhibits were made. In all of these classes there were several cattle that got high rank on the score card.

There is not as much interest, however, among dairymen in fairs this year as usual. The labor situation has been so acute as to make many of those who wanted to exhibit, give up their hopes. Several southern fairs have been cancelled on account of the spread of influenza.

Georgia. C. A. WHITTLE.

The S. O. S. of Dairying

Silage and Soiling

Saves feed.
Indispensable to dairying.
Labor saving.
Always in season.
Good for all stock.
Enhances milk production.

Saves land.
Obviates unproductiveness.
Increases milk production.
Lowers cost of milk production.
Improves the flavor of product.
Not dependent on unlimited capital.
Gives variety to the ration.

Silage is essential, soiling advisable for dairying.

A. C. MCCANDLISH.
Iowa College of Agriculture.

The Pioneer American Separator

and the

Most Efficient

P. M. Sharples, President of the Sharples Separator Company, invented the first American Cream Separator. For over a third of a century, he has been manufacturing and improving this remarkable saver of butterfat.

Tests show that all separators are turned at the wrong speed some of the time; some separators are turned at the wrong speed most of the time—but the Sharples Suction-feed Separator skims clean at *any* speed *all* of the time.

The Sharples provides a method of positive conservation of millions of pounds of butterfat at a time when such food is so valuable.

The Sharples factories are the most extensive of their kind—and the Sharples institution is the largest American-owned separator and milker business in the United States.

Association Notes

Canton, Pennsylvania:—Dairymen are on the lookout for better sires and the testing association work covering the past five years is having good effect. In October market milk sold for $3.50 per hundred, the average test required being 3 per cent and for each point above, 4 cents were paid. Milk retailed for 14 cents per quart, butter 60 cents per pound, and cheese 30 cents per pound. Corn meal sells for $3 per cwt.; bran, $2.15; gluten, $2.80.

Eastern Bradford, Pennsylvania:—Ten boarder cows were sold during the past month. In September market milk sold for $2.84 per hundred, the average test required being 3%, and for each point above, 4 cents were paid. The creamery paid $.53 per pound fat. Butter sold for 60 cents per pound. The prices of feeds are: Gluten, $2.37 to $2.95 per cwt.; oil meal, $2.68 to $3.10; Arcady Dairy Feed, $2.60; Unicorn, $3; buckwheat feed, $1.70.

Orange, Virginia:—In September market milk sold in Washington, D. C., for $3.63 per hundred. The average test required was 3.5%, 4 cents being paid for each additional point. The creamery paid 82 cents per pound for fat.

Lake County, No. 2, Illinois:—This association has been organized for another year's work. With the exception of two, all the old members have stayed in. The interest they are taking in the work is remarkable. Several of the members are in the market for pure-breds. Three new silos were built this fall. In Chicago in October market milk sold for $3.22 per hundred, the average test required being 3.5%. Unicorn costs $65 per ton; oil meal, $60; brewers grains, $58; bran, $38; Schumacher feed, $54; corn meal, $60; Planters dairy feed, $48; alfalfa hay, $30.

Arkansas Valley, Colorado:—Our near "dryland" neighbors raise considerable milo-maize, feterita, and dwarf broom corn. The dairymen here are materially reducing their feed cost by utilizing these home-grown products. The milo-maize and feterita crops are either put in the silo while green or later headed and ground. The broom corn stover while still green is ensiled. This makes a succulent although not a rich feed. The entire crop of barley and emmer is being ground and used within the county. Adding these feeds to the home-grown corn and alfalfa and supplementing them with the by-products from the local flour mills, will avoid the high freight rates to a large extent. In October market milk sold for $3.35 per hundred. The average test required was 3.5% and for each point above, 3 cents were paid. The creamery paid 58 cents per pound fat. Milk retailed for 13c per quart and butter 60 cents per pound. Local prices of feed: Alfalfa, $20 per ton; corn silage, $8; corn fodder, $6; beet tops, $6; mangels, $6; corn, $3.15 per hundred; barley, $2.50; emmer, $2.50; headed-milo, $2; bran, $1.25.

Johnstown, Colorado:—The longer I stay with the testing work, the mor important I find it. During the pas year I have found "leaks" on man dairy farms and still continue to fin them. Some dairymen have a ver poor method of feeding grain, th mangers many times being so narro that the cattle drop most of the grain in the litter in front of th manger. Other instances have bee found where the mangers have larg cracks and much of the grain fal through. Many hay feeding racks ar very wasteful of feed. I have su ceeded in getting several men to s these things and to remedy them.

The cow, Rocabie, owned by W. Purvis, has already produced 13,0 pounds of milk and 482 pounds of f in seven months, a production due a parently to systematic feeding. La year she was not fed properly an only produced 406 pounds of fat du ing the entire year.—R. M. Curti tester.

As to the benefits of keeping re ords, H. W. Cooley, a member of t Linn County Association, Orego says: "In two years' time my crea check has been increased form $142 $287 per month from the same nu ber of cows." He says he attributes th largely to the work of the testing a sociation. A Washington County A sociation member says: "Having r herd book at the sale and showi the records of each animal as she w sold, I am sure that I received fr thirty to forty dollars more per cow

"My herd average has been rais from 6,347 pounds of milk and 28 pounds of fat in 1915 to 6,578 pou of milk and 315.3 pounds of fat 1917. I attribute this to the work the testing association.—Wm. Wi iams, Oregon.

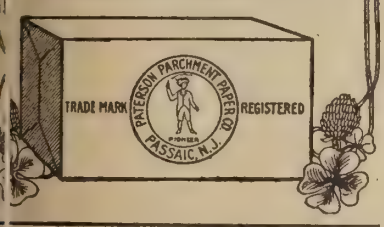
"My cream check from 27 cows the month of September, 1916, w $46.70. My cream check from 28 co for the month of September, 1918, w $515. This increase in production w due to the keeping of records."—No Black, Smith and Umpqua Assoc tion.

The Inter State Fair at Prinevi Oregon, which is in the heart of a ranching beef section, had one of best dairy shows in the state t year except the state fair. Our te ing association is largely responsi for this, as it has taught the peo how to dairy.—John Kemmli Oregon.

Stillaquamish, Washington:—T noticeable improvement of the he in the association is due to the univ sal practice of keeping registe bulls. In several herds the older c are being sent to the butcher, and daughters which show an impro ment over their dams are taking th places. A number are trying alf this year for the first time on highland.—H. M. Quimby, tester.

Clarke County, Washington:—M cows are coming fresh and the p pects are good for winter dairy Twelve cows went for beef. dairymen realize the necessity weeding out the low producers. F is bound to be high and scarce. La

"Customers, gladly pay more for butter they know is as perfect as when it first comes from the churn.



"That's why I wrap my butter in

Paterson Pioneer Parchment Paper

"Keeps it clean—sweet—pure. Makes my butter *worth* more and *sell* for more. Yet, the small cost of this Parchment Paper isn't worth considering when compared with my extra profit."

Our free booklet, "Better Butter" means better butter prices. Write for it.

saving devices must be adopted by every dairyman.—R. L. LAUDERDALE, tester.

Issaquah, Washington:—Everyone is getting ready for silo filling time. The corn is excellent so far, and will be well dented in most instances. Most of the members of the association have a good supply of roughage for the winter and with the gradual increase in the price of milk, things are looking brighter.—E. B. KINYON, tester.

Whitman—Spokane, Washington:—The report of this association shows an unusually high production among individual cows in the herds. A pure-bred Jersey owned by Jay R. Graves produced 1,589 pounds of milk and 79 pounds of fat with a total feed cost of $30.09, and a pure-bred Jersey owned by T. S. Griffith produced 1,535 pounds of milk and 64.8 pounds of fat at a feed cost of $26.17. A pure-bred Holstein owned by A. V. Bradrick & Son made 1,851 pounds milk and 62.9 pounds of fat with a feed cost of $11.75.—R. C. JOHNSON, tester.

Wahkiakum County, Washington:—Every member has a pure-bred bull, and most of them are from cows with a record behind them. One member purchased three pure-bred Jersey cows this month and another 2 pure-bred Holstein heifers. Pasture is showing up good and will probably be good until the middle of November. The past five months this association has had 718 forty-pound cows. Can you beat it?—G. E. SONNER, tester.

Walla Walla Valley, Washington:—Eight cows have been sold for beef, and three cream separators corrected. Recent auction sales of dairy stock in the Valley indicate more clearly than a page of argument the money value of having records on cows. At one sale each cow's record was read and the buyer knew what he was paying his money for. At another no records were kept, the buyer was in the dark as to the production of the cow, the bidding was low and the average sale price far below the one where the records were kept.

Ft. Atkinson, Wisconsin:—One member sold several cows. Two members bought pure-bred sires whose dams have records of 25 lbs. fat and over per week. Two more milking machines have been installed in the association, making the total five. Most members will use home-grown feeds this winter. Some have purchased oil meal. In October market milk sold for $3.25 per hundred. The average test required was 3.5% and 4c was paid for each additional point. The creamery paid 60 cents per pound fat. Oil meal costs $62 per ton; mixed dairy feeds, $55; oats, $45; barley, $45.

Craftsbury, Vermont:—Very few silos have been filled; one or two were filled with millet and clover rowen. Most every man has plenty of hay, very little being sold. Grain is hard to get. Most members are feeding ready mixed grains costing around $65 a ton. Some farmers have fed no grain since turning cows out to pasture last spring. Most herds are in good condition to come to barn. In September market milk sold for $3.50 per hundred. The average test required was 4%, and for each point above, 4 cents was paid. The creamery paid 51 cents per pound fat. Butter sold for 55c per pound.

Ambition is life's great pathway that points to the stars. It is lighted by the rays of hope that spring from the heart of man and is paved with beads of sweat that fall from his brow.—THE PEPPER BOX.

Today's Gasoline

Less volatile product raises a new lubricating problem

PRESENT-DAY gasoline is less volatile than that formerly sold. It does not readily saturate the air in carburetion. Combustion of the explosive mixture is less complete.

This risk results: Liquid gasoline may be drawn into the cylinders and combustion chambers. The use of the carburetor choker valve to start the engine aggravates the trouble.

Once in the cylinders and combustion chambers, the gasoline tends to thin out the lubricating oil. As the pistons move up and down the gasoline tends to cut away the oil film on cylinders, pistons and piston rings.

On the compression stroke this liquid gasoline is forced down past the piston rings—into the crank-case.

The amount of gasoline which reaches the crank case and mixes with the lubricating oil depends largely upon the correctness of the lubricating oil used. Oil must form and maintain a thorough piston-ring seal to prevent the escape of the fuel charge and liquid gasoline past the piston rings into the crank-case.

To withstand the cutting effect of present-day gasoline, your lubricating oil must be of the highest quality and of the correct body. The Chart below specifies a grade of Gargoyle Mobiloils for your car which fills both these requirements. The use of the correct grade of Gargoyle Mobiloils will give you scientific protection against premature thinning out of oil in your crank-case.

If you have not read the article on pages 19 and 20 of the booklet "Correct Lubrication," it will pay you to send today for a copy. This book contains valuable data in authoritative articles prepared by our Board of Engineers.

GARGOYLE

Mobiloils

A grade for each type of motor

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container. If the dealer has not the grade specified for your car, he can easily secure it for you

CORRECT AUTOMOBILE LUBRICATION

How to read the Chart:

The four grades of Gargoyle Mobiloils, for engine lubrication, purified to remove free carbon, are:

Gargoyle Mobiloil "A" **Gargoyle Mobiloil "E"**
Gargoyle Mobiloil "B" **Gargoyle Mobiloil "Arctic"**

In the Chart below, the letter opposite the car indicates the grade of Gargoyle Mobiloils that should be used. For example, "A" means Gargoyle Mobiloil "A," "Arc" means Gargoyle Mobiloil "Arctic," etc.

This Chart is compiled by the Vacuum Oil Company's Board of Engineers and represents our professional advice on Correct Tractor Lubrication.

YOUR TRACTOR

also may be lubricated efficiently with Gargoyle Mobiloils. On request we will mail you a separate Chart specifying the correct grade for each make and model of tractor.

VACUUM OIL COMPANY, Rochester, N. Y., U.S.A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world

Domestic Branches: Boston, Detroit, Kansas City, Kan., New York, Philadelphia, Chicago, Minneapolis, Indianapolis, Pittsburgh, Des Moines

Warren Formula Explained

The so-called "Warren formula" for ascertaining the cost of producing 100 lbs. of 3.8% milk in the New York district is described as follows in a circular issued by the New York Dairymen's League:

The average annual quantities of feedstuffs and labor to produce 100 lbs. of market milk of 3.8% test is: 33.79 lbs. grain, 43.3 lbs. hay, 10.8 lbs. other dry forage, 92.2 lbs. silage, 8.3 lbs. other succulent feed, 3.02 hrs. labor.

When current values are applied to the above quantities, the sum of such values is 79.7% of the average annual cost of producing 100 lbs. of milk, the remaining 20.3% being for bedding, pasture, use of buildings, cans, and other equipment, bull service at cost, horse labor at cost, depreciation of dairy cows, cash paid for milk hauling, fire and lightning insurance on cows, veterinary and medicine, louse killers, ice, salt, and numerous other minor miscellaneous expenses. From the total value of these is deducted the value of calves, manure, feed bags sold, and a few other miscellaneous credits. As the above represents but 79.7% of the entire cost, 25% must be added to the costs computed according to the above table in order to secure the entire cost.

The above formula determines average annual costs. To ascertain the costs for any particular month a table of percentages (known in the trade as Professor Warren's Scale) is used, by the application of which percentages to the average annual costs, the cost for each month is ascertained. This table of percentages is as follows:

	Per cent		Per cent
January	119.0	July	81.0
February	114.7	August	90.8
March	106.1	September	96.9
April	93.9	October	110.4
May	79.1	November	119.0
June	70.6	December	120.2

Method of Determining Values

At a conference between producers and distributors held at the request of the Federal Food Administration, Professors Warren and Larsen were requested to suggest a method of determining the value of "other dry forage" and of "silage and other succulent feed", and they reported that two-thirds of a pound of hay was equivalent in value to one pound of other dry forage and that one hundred pounds of silage and other succulent feed was equivalent in value to eight pounds of corn and sixteen pounds of hay. This report was adopted by all parties, the revised feed requirements for producing 100 lbs. milk being simplified to 33.79 lbs. grain, 50.5 lbs. hay, and 100.5 lbs. silage.

The value of hay and corn shall be determined by quotations of their farm values in New York State, as published in the Monthly Crop Report published by authority of the Secretary of Agriculture of the United States.

The value of grain feeds shall be determined by market quotations of prices charged retailers in the Utica, New York freight district, adding thereto the retailer's profit of $4.00 per ton as allowed by the rules of the Federal Food Administration, where purchases are at the warehouse and in lots of one ton or more.

The value of labor per hour shall be determined by investigation at different points in this milk producing territory, and shall be based upon the average price as near as can be ascertained of hired men's wages and the value of the services of the farm operator, it being understood that about one-half of the market milk produced in the milk territory tributary to Greater New York is produced by

SAW WOOD

Use Your AUTO As a Stationary Engine.

There's a great fuel shortage—Protect yourself—saw your own wood. It's easy with our Equipment and your car to furnish power. A big labor and money saver for you. Does all a 14 H. P engine can do.

Fits: Ford, Fordson, Reo, Hudson, Studebaker, Overland, Dodge, Buick & others

Furnishes plenty of power for filling silo, running shredders, grinding feed, sawing wood, etc.

Get one NOW—hundreds in use—Satisfaction guaranteed—only . . . **$35.00**

CAN'T PUNCTURE NOR BLOW OUT

DAYTON AIRLESS TIRES in the past 6 years have been used by thousands of owners of light passenger and delivery cars in all parts of the civilized world and have conclusively demonstrated:

1st—They can't puncture nor blowout.
2nd—They ride as smoothly as pneumatics.
3rd—They give much longer wear than the average pneumatic.
4th—They absolutely will not injure the car.

They have been endorsed by 50,000 or more satisfied users including the late George Westinghouse and Edward Grey, formerly Chief Engineer of the Ford Motor Company.

Piers of live, elastic rubber built about one inch apart inside the casing and vulcanized or welded to it take the place of an inner tube.

Nothing can happen but wear.

We have standardized on 30 x 3 and 30 x 3½ and the price is right.

We sell direct where we have no dealer.

We want an exclusive dealer in every county—tire experience not necessary. Excellent chance to build up in a protected territory a very profitable business either by itself or as a side line.

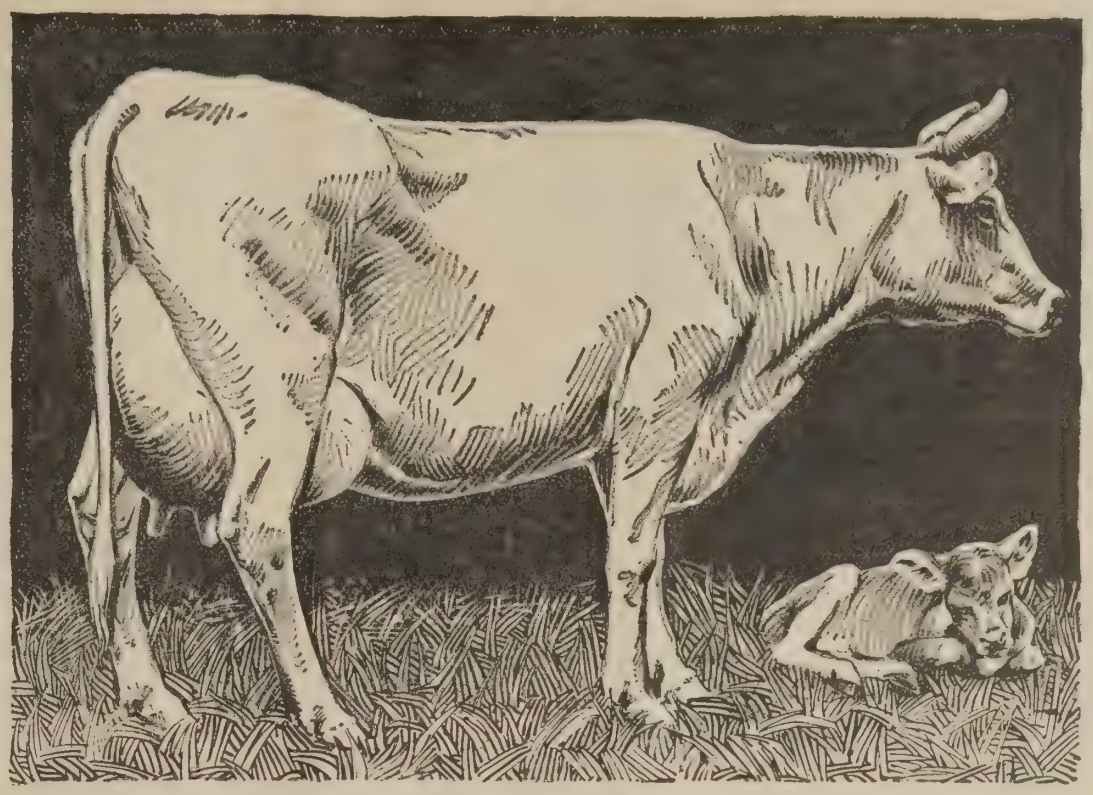
se who manage and operate the ms.

The present (September) values of e several items entering into the nputations were found to be: ain, $3.0367 per 100 lbs.; corn, 92 per bushel ($3.43 per 100 lbs.); y, $17 per ton ($.85 per 100 lbs.); l labor, $.334 per hour. As 8 lbs. rn and 16 lbs. hay were considered al to 100 lbs. of silage in feeding ue, the silage would be valued at 1 per hundred pounds. Applying se several values to the simplified mula, and making the other requi- e computations, the total average nual cost of producing 100 lbs. of % milk was found to be $3.595, as llows:

79 lbs. grain at $3.0367 per 100 lbs.	$1.026
.5 lbs. hay at $0.85 per 100 lbs.	.429
1.5 lbs. silage at $0.41 per 100 lbs.	.412
2 hrs. labor at $0.334 per hour	1.009
tal (79.7% total cost)	$2.876
l 25% for miscellaneous costs	.719
tal average annual cost	$3.595

According to Professor Warren's ale", the percentage spread for Oc- ber is 110.4%, therefore the October st of producing 100 lbs. of 3.8% lk would be $3.595 multiplied by 04, or $3.97. The basis of the New rk prices has always been 3% milk d the allowances for higher tests is w 4 cents per point fat, therefore st of producing 100 lbs. of 3% milk computed by deducting 32 cents alue of 8 points butterfat at 4 cents r point) from $3.97. This makes 65 per 100 lbs. of 3% milk as the sic price of milk, which the New rk producers asked for the month October. Values for other months d at other prices may be similarly culated.

Prevailing Milk Prices



From reports of the U. S. Bureau Markets we take the following ces per quart of "standard grade" lk received by producers and paid consumers in several widely scat- ed sections of the country during month of October:

	Producer Receives cents	Consumer Pays cents
Francisco, California	7.7	14
ver, Colorado	6.7	12
shington, D. C.	11.0	17
Petersburg, Florida	10.5	15
usta, Georgia	9.0	18
ago, Illinois	7.1	13
t Wayne, Indiana	5.9	13
Moines, Iowa	7.8	15
sas City, Kansas	7.0	14
Orleans, Louisiana	9.5	16
ton, Massachusetts	9.4	15¾
roit, Michigan	7.3	15
Paul, Minnesota	6.9	12
Louis, Missouri	8.2	14
York, New York	8.3	15½
eland, Ohio	8.1	14
ene, Oregon	7.5	14
sburg, Pennsylvania	8.7	14
adelphia, Pennsylvania	9.0	13
phis, Tennessee	8.5	16
aso, Texas	8.6	18
Lake City, Utah	7.2	12½
ane, Washington	7.9	15
waukee, Wisconsin	7.9	12

he prices quoted for producers ing to Chicago and Detroit are for k delivered at the country shipping tion, while the others are F. O. B. and to get actual price the vari- transportation costs must be de- ted. The average test required of ducers is 3.5%, but it varies for several cities from 3.25 at El so to 4% at Philadelphia. From r to five cents per point fat is paid 100 lbs. milk for tests higher than t required. The consumer's price or milk bottled in quarts and de- red.

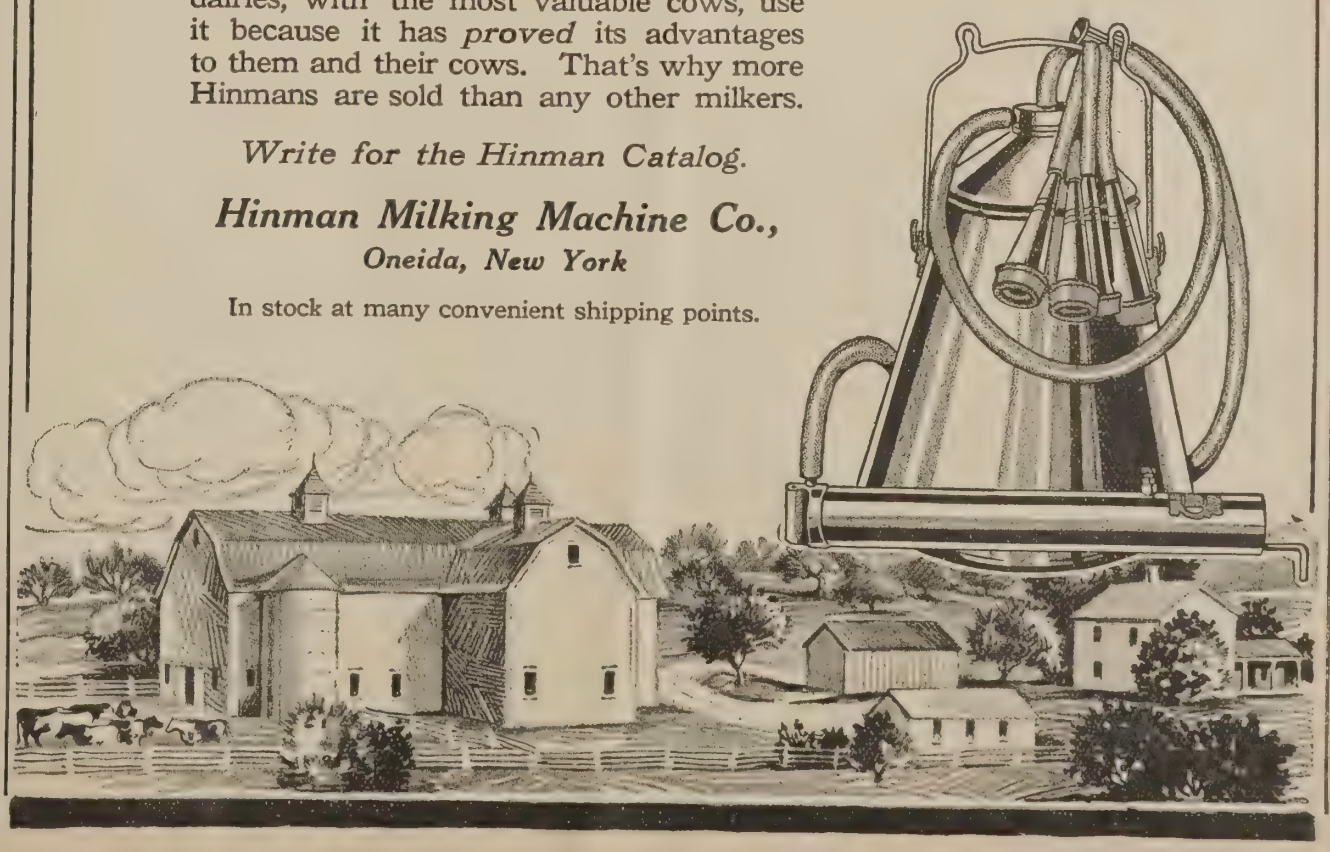
Jersey Cattle Notes

or week ending Nov. 1, 1918: umber of animals registered: lls, 183; cows, 420; total, 603. mber of transfers recorded: Bulls, ; cows, 365; total, 476.

You know you are Safe

WHEN you buy a Hinman there is no question, "Will it work? Will it save time? Will it improve the milk flow and help the cows?" During ten years Hinman Milkers have found their way into many thousands of Dairies. They are right now in use by a great army of cow owners—and on some of the finest prize stock ever registered. Big and little dairies everywhere are operating the Hinman day in and day out with absolute success.

HINMAN MILKER



You *know* you are *safe* when you buy the Hinman.

You know that it is the simplest and surest milker made, that a boy or girl can easily operate it. You know that the best dairies, with the most valuable cows, use it because it has *proved* its advantages to them and their cows. That's why more Hinmans are sold than any other milkers.

Coming Events

Wisconsin Dairymen's Association meets at Menomonie, December 5 and 6. Secretary, P. C. Burchard, Ft. Atkinson, Wis.

National Farmers' Exposition, Dec. 6—14, Toledo, Ohio. Manager, H. V. Buelow, Toledo.

A Producer on New York November Milk Prices

HOARD'S DAIRYMAN:—The last day in October the League has, under some protestations, I understand, accepted the price of the Food Administrator of $3.81 a hundred for November milk. The up-state food administrator for New York stated this morning that he regarded the milk situation in New York for the past year about as bad a bungle as can be found. The cause is not all on one side, he said, but he thinks that the Food Administration is the largest factor in the unsatisfactory situation. His prediction is that within a month a better solution will be had. I find that farmers generally do not place any great confidence in the implied promises of the administration. There have been so many such promises gone astray that others are expected to do the same. It is a strange situation that farmers continue to advocate large production to help the war situation when they feel as they do about getting help from authorities, as in this case, but it goes far to prove the farmer's loyalty to his country.

The price of $3.81 means at 150 miles out from New York, and when it gets up into the larger producing sections where the League contends the price should be based, it is cut to $3.73 or about that. This is for three per cent milk, and if we assume 3.6 test is about the average, and that it costs the average farmer about twelve cents to deliver his milk, we find this average man getting at the farm not far from $3.85 a hundred. This is just a trifle above eight cents a quart.

The things that are to be done the coming month to make conditions better, as promised, have not been announced yet. We hope it is an effort to determine if so much margin is really necessary between the farm and the final purchases. It is estimated that there was, last Saturday, some heat developed between the League and the Administration in the conference in Washington. The League meeting in New York on Wednesday was attended by an administration man who is understood to have been there to help smooth matters down. This seems to have been done by the implied promise above referred to. We will await patiently the developments and follow the administrator's advice given this morning, not to rock the boat just now. We will accept the conditions and be patient about it for a month.

New York. H. H. LYON.

New York Milk Prices for November

The Federal Food Board announced, to the trade press and dairymen recently, the new milk prices for the month of November. These prices were discussed at a conference in Washington, D. C., and telegraphed to the Food Board at New York City by Dr. Clyde L. King, assistant in the Food Administration. The schedule is increased over that of October one-half cent for quarts and one cent for pints. The prices follow:

	Price, cents
1 Grade "A"—Bottled, delivered, qts.	18
2 Grade "A"—Bottled, delivered, pts.	11
3 Grade "B"—Bottled, delivered, qts.	16
4 Grade "B"—Bottled, delivered, pts.	10
5 Grade "B"—Bottled, to stores, qts.	15½
6 Grade "B"—Stores, to consumers, qts.	16
7 Grade "B"—Loose, to stores,	12½
8 Grade "B"—Loose, by stores	13
9 Grade "B"—Wholesale, 10 gallons, qts.	12¾
10 Grade "B"—Under 10 gallons	13

The published announcement of the increased prices reads, in part, as follows:

"The Food Administration states that a thorough examination of the accounts of the milk distributors shows that they have lost money on milk sold during the month of October and will lose money during November at the prices already announced.

"The distributors, however, accept these prices rather than have a further increase in cost to the consumer, which would be likely to result in decreased consumption.

"The price of ten cents a pint for Grade "B" bottled milk is explained by the Food Administration as based upon the fact that the cost of delivering pint bottles of milk is practically the same as that for delivery of quarts. The public is urged to use quarts bottled rather than pints, because of the greater economy in the use of the larger size.

"The price to the dairy and milk producers of $3.81 for 100 lbs., which was approved by Mr. Hoover some time ago, means a cost of approximately 9 cents a quart to the distributors, to which has to be added the cost of distribution, transportation, bottling, delivery, and overhead expenses."

New York. A. H. KOLBE.

New York Butter Market

NEW YORK CITY, Nov. 6—The market is responding promptly to several factors which usually influence it and is becoming much stronger. In the first place receipts are falling off considerably and the element of supply is, as usual, making itself felt. The decrease in receipts is due primarily to the usual fall decrease in production. In addition the influenza epidemic is abating rapidly and there is a greater consumptive demand in New York than has been in evidence for the past two or three weeks. On top of all there has been some speculative activity particularly with undergrades and centralized butter and those stocks have moved quite freely. However, the speculative demand would have been in greater evidence had it not been that storage facilities were limited, the government having commandeered all available space for storing its supplies. The proportion of high quality butter as compared to undergrades is rapidly diminishing and it is expected that that condition will continue during the next few months.

Since last Tuesday the quotation on extras has advanced a full two cents, that is, up until yesterday. Today being election day, New York has declared a holiday and no butter is moving at all, neither has the Exchange met. On Wednesday of last week quotations advanced a half cent. That was followed by half cent advances on Saturday and yesterday, leaving the price of extras, as established yesterday, 60c. Quotations on other grades of butter advanced similarly and at the close yesterday additional quotations were as follows: Higher scoring than extras (93 score or above), 60½@61c; firsts (88 to 91 score), 57@59½c; and seconds (83 to 87 score), 53@56½c. There is a growing demand for unsalted butter and it is moving freely.

Quality of butter in general shows a marked deterioration. In addition to foreign flavors the workmanship is not up to normal. The undesirable flavors are undoubtedly due to the fact that dairy herds are being kept in barns over night and to the change of feed since the pasturing season is over. Then, too, many whole milk creameries are receiving milk four times per week instead of daily as during the summer months, the quality of the milk being affected thereby. As usual, in handling milk or cream, farmers become less careful with the approach of cooler weather. The result of all conditions enumerated show up markedly in the quality of butter. There is some mottled butter in the market which indicates that buttermakers have not taken into consideration the difference in composition of butterfat during cooler seasons and have not changed their methods accordingly. W. B. LIVERANCE.

Annual Meeting of the Wisconsin Dairymen's Association

The forty-seventh annual meeting of the Wisconsin Dairymen's Association will this year be held at Menominie, Wisconsin, on December 5 and 6. The meetings will be held in the auditorium of noted Stout Institute, which was founded through the generosity of the late Senator Stout and has recently been taken ov the state of Wisconsin as a pa the state school system.

Prominent Dairy Investigator

Fred Silver Putney, professo experimental dairy husbandry a Pennsylvania State College and known among dairy professors an vestigators throughout the U States, died of pneumonia at his in State College, Pennsylvania, ber 5, 1918.

Always interested in live problems, in recent years he ha voted his energies to teaching fundamental research along the of animal nutrition. Dairy feeding problems have been his cial interest and his work along lines is well known. He is co-a with Dr. C. W. Larson of the book and general reference "Dairy Cattle Feeding and Ma ment", and, in conjunction with D P. Armsby, of the bulletin "Com tion of Dairy Rations", in additi numerous papers on dairy ma ment and nutrition.

Professor Putney was born in kinton, N. H., November 10, 1881 was graduated from the Concord School in 1901 and received the degree from the New Hamp State College in 1905. In 190 Pennsylvania State College conf upon him the degree of Maste Science, and he had completed re ly the requirements for his doct degree at the University of Wi sin.

Professor Putney first went t Pennsylvania State College in where he worked with Dr. H Armsby as an assistant in anima trition and general experim work until 1908. That year he be assistant to Dean F. B. Mumfor the College of Agriculture, Univ ty of Missouri, at which instit he continued his studies in nutr towards a doctorate degree. Missouri he went to the Rhode I State College as professor of a husbandry and head of the de ment, and he remained at that in tion for several years. In 1913 h turned to the Pennsylvania State lege as assistant professor of

Hood Farm Challenges

Je ability of champion sires and
a pion dams to reproduce them-
el s is often questioned by many,
p ially by those who have not made
reful study of the whys and
h efores of breeding. I give below
ic and figures which prove the
re ling on ability of champion Jer-
ey

We believe the sire referred to be-
wis the greatest dairy sire alive,
if others have a sire who has
a hters to equal the daughters of
Po 99th of Hood Farm, we would
kto see the figures.

Pogis 99th of Hood Farm 94502
a dropped December 25, 1909. He
e sire of 54 Register of Merit
v and two producing sons. His
re was Hood Farm Pogis 9th 55552,
ro f 79 Register of Merit cows and
5 roducing sons, and his dam, So-
ni 19th of Hood Farm 189743,
c l's champion Jersey cow with a
re s record of 17557 lbs., 12 oz.
il 999.1 lbs. fat, and a world's
a pion long distance seven years'
re d of 91,869 lbs. milk, 5,280.6 lbs.
t Pogis 99th of Hood Farm is
a mitting his inheritance through
t sons and daughters, some recent
s showing up more forcibly his
p erful prepotency. His daughters
v records as follows:

D 's Adaline	Age	Milk lbs.	Fat lbs.
Ne of Cow	4 yrs.	15852.2	888.00
D 's Adora	4 yrs. 9 mos.	16102.1	876.35
D 's Bertha	4 " 8 "	14149.7	834.88
D 's Agnes	4 " 2 "	13718	789.55
D 's Cora	4 " 5 "	11850.2	751.69
D 's Charity	5 " 1 "	11982.7	703.18
D 's Jewel	2 " 3 "	10813.9	689.54
D 's Dolly Dimple	2 " 3 "	12205	625.07
D 's Emily	5 " 7 "	10251	619.76
B 99th's Bessie	2 " 9 "	11345.5	606.57
D 's Christina	2 " 8 "	19361.7	608
D 's Deborah	2 " 10 "	9380	580.1
D 's Beth	3 " 9 "	9475.2	537.4
D 's Blanche	2 " 11 "	9200.9	533.8
D 's Ada	2 " 1 "	9147	497.9
Average for 15	3 " 7 "	11722.3	676.1

This is only part of the story as
the daughters on test will carry
the averages much higher, and it
will be years before the final story
can be written. It is ample proof,
however, that the champion bull and
champion cow of the breed are breed-
ing on and up.

Massachusetts. J. E. DODGE.

The Hired Man's Morale

The farm hand who has a room of
his own—in the house, not the barn—
with a chance at the bath tub and a
car or car to take him to town oc-
casionally, is worth any number of
discontented, poorly housed hired
men. The tenant paying share rent
on a long lease, with good live
stock and modern ideas of farming is
worth more than twenty soil robbers
who stay for a year, neglect all the
things, and then move on to repeat
the offense.

The comparison is just as true be-
tween soldiers. Nine men who are
happy and contented can out-
fight ten men who are lonesome and
homesick. Every military man certi-
fies to the importance of that truth.
Morale is worth 24 billion dollars to
next year, surely it is worth $170,-
America to keep its men under arms
500,000 to make them fight 10 per
cent more efficiently—to contribute
that factor which, as Napoleon said,
is "as other factors in war as three
to one"—that indispensable factor,
morale.

You'll have your last chance next
Monday, Nov. 18, to contribute to the
influence which creates and maintains
this morale in the American forces
here and over the sea, the United War
Work Campaign. Seven organiza-
tions, recognized by the War Depart-
ment, and consolidated for one drive
upon President Wilson's request are
asking for the money. Every king,
premier, and prominent general of
the allies has written to urge the ne-
cessity of the work which is repre-
sented by these united agencies—not
merely as a fine service to the sol-
diers, but as an actual military neces-
sity.

The amount requested—$170,500,-
000—will have to be subscribed, in-
deed, if the war work is to go on un-
hampered. John D. Rockefeller, Jr.,
chairman of the campaign for the
New York district, declared a few
days ago that 250 million dollars
would be needed. The campaign bud-
get, he said, had been approved by
the War Department but that bud-
get represented the estimates made
before the plans for the second draft
were announced and before there was
talk of sending 4,000,000 men to
France.

"We all admit," Mr. Rockefeller
said, "that the facilities offered by
these organizations to the soldiers
are worth, one would say, not less
than $1 a day certainly. For 1,000,-
000 men that means $1,000,000 a
day, or $365,000,000 a year. But we
are seeking now only $250,000,000.

"Among the questions asked us is
whether, if the war should end, there
will be a need for this money. The
answer is that the
sooner the war stops
the more urgent will
be the need for the
money. More and more
money will then be
needed. Now our fight-
ing men are keeping
themselves fit for their
hard tasks, and they
are occupied in a great
struggle." — CHARLES
DILLON, Director Rural
Publicity, United War
Work Campaign.

Mouse Control in Orchards

"Mice in the orchard are allies of
the Hun," says R. B. Cruickshank of
the Department of Horticulture of
the Ohio State University. Further
in this connection he says, "that un-
less the young trees are protected,
considerable damage is often done
during the winter by the rodent."

As a protective measure he sug-
gests that during the fall or early
winter all weeds and rubbish should
be hoed away from the trees, leaving
the soil clean and well firmed about
the trunks to a distance slightly be-
yond the spread of the branches. A
slight mount around the trunk of the
tree is an additional advantage.

Every owner of a cow welcomes the
time when the animal can be turned
out to pasture because each cow is ex-
pected to give the best results of the
year on grass. Immature grass, such
as we have in early spring, contains a
large amount of water and a small
amount of dry matter. It is almost
impossible for a heavy milking cow to
eat enough of such feed to supply the
necessary amount of nutrients.—C. H.
ECKLES.

Make More Money With Hogs

THIS largely involves the feed question, as feed is the principal cost of producing pork. It is not only what to feed, but how to feed, to enable the feeder to get the most out of hogs, in the quickest time at least cost.

An Ideal 900-Lb. Brood Sow.

It is a proven fact two or more feeds properly combined are better than any one of the same fed singly. The general farmer, without knowing it, wastes one-fourth of the feed given his hogs, which is a total loss. This is where the balanced ration comes to the relief of the wise feeder. It is not what the pig eats, but what he digests and assimilates that makes the profits.

Expert feeding means success. It teaches you how to cheapen the feed, how to get greater growth and gain over the common way of feeding, from the same feed given, and how to get more pounds of pork from a bushel of corn.

The American Swineherd

is progressive and aggressive. It instructs you in the wisdom gathered by experience, from the greatest experts in their line, being successful, practical feeders, managers and caretakers of the herd. It is a specialist in producing pork from pighood to the pork market. This is the era of advancement and adoption of up-to-date, scientific methods in the hog business. There is a new crop of experience grown monthly.

Special Offer:—For $1.00 we will mail you the *American Swineherd* for 2 years. This is the cheapest expert help you can hire. It pays and is economy to take advantage of the experience that brought the other fellow success.

The American Swineherd was founded 33 years ago by the present editor. We have subscribers who have taken the paper for over 25 years. Hundreds of them on renewing say: "Don't let us miss a copy". TO MAKE THIS OFFER SAFE AND FAIR, if you send in the dollar and are not satisfied upon receiving your second month's paper, if you will write us then we will send you the dollar back and take your name off the books.

We give you as a premium for your subscription a copy of the "Hand Book on the Sow". Louis Olin, Peekskill, N. Y., writes:—"I found information, out of a single copy, that, put to practice, saved me more than the cost of your paper for ten years". No matter how many papers you take, you need the money-making information the "Swineherd" gives you. S. A. Love, Supt. Mountain Orchard Farm, Johnstown, Pa., writes:—"I believe the Swineherd the most valuable publication on our list, which includes 16 of the best, dealing with all branches of stock raising, dairying and farming". Address:

American Swineherd, 322 Old Colony Bldg., Chicago, Illinois.

The Farmer's Service Shoe

Here is a new splendid shoe, designed specially fo farmers. Made for hard service, long wear, and real comfort. Will outwear shoes that cost considerably more. Particular care is taken with every part of the Farmer's Service Shoe and EVERY PAIR IS INSPECTED before leaving the factory. Only GENUINE SOLID LEATHER SOLES AND HEELS, TAN-OILGRAIN UPPERS, SOFT, COMFORTABLE, ROOMY TOES, BELLOWS TONGUE to keep out dirt, dust and pebbles. Sizes 6 to 11. We know you'll be more than pleased with the Farmer's Service Shoes and if you will send check or money-order, giving exact shoe size, we will mail the shoes to you at once, parcel post free. If they aren't the best value you ever saw, send them back, we'll refund your money.

EDITORIAL COMMENT

THE Eau Claire Creamery Co. shipped in October a carload of butter containing 600 tubs, weighing on the average 63½ lbs., and 50 boxes, weighing 50 lbs. each. This butter sold F. O. B. for 64 cents a pound, making the carload worth $26,000. This, so far as we know, was the highest price ever paid for a carload of butter.

MILK FOR WOUNDED SOLDIERS

Dr. Truman Brophy, who for many years was a prominent breeder of Guernsey cattle in Illinois, is now in France helping to care for wounded soldiers. He sends us a copy of "The Daily Mail" of Saturday, September 21st, which reports the following:

"As a token of appreciation for the United States effort, the people of the Channel Islands, Guernsey and Jersey, have volunteered to stock the American Red Cross hospital farm at Sarisbury Court, near Southampton, with sixty pure-bred dairy cows."

This war has revealed that no food is better adapted to help wounded soldiers recover than milk and an effort is being made to provide all hospitals with an adequate supply.

MUSH AND MILK

The standard supper for the earlier settlers of this country was mush and milk. It is a better ration, and less expensive, than is now used in most homes. It is a balanced ration and especially desirable for growing children.

Our war has turned our attention to simpler diets and mush and milk is again in good standing. The Dairy Division states it is a suitable war ration and in a recent bulletin says:

"What has become of the old-time bowl of cornmeal mush and milk? It is an American dish, cheap, nourishing, and palatable. We of the older generation loved it, and for economical, sentimental, and patriotic reasons we should now go back to it and take all America with us. Mush and milk furnishes a balanced ration, yet contains no wheat, no meat, no sugar. It is a whole meal in itself, and while the war lasts it should be used more largely in this country. Its larger use here will release other and more concentrated foods for our armies and the armies of our allies."

ROQUEFORT CHEESE FROM COW'S MILK

The Dairy Division of the U. S. Department of Agriculture has been successful in making and curing Roquefort cheese. This type of cheese has been made very largely in France from goat's milk or a mixture of cow's and goat's milk. It has been cured in cellars or in caves in order to develop its characteristic flavor. The temperature and humidity of these places must be controlled in order to permit the growth and development of the bacteria and fungi that provide the flavor in Roquefort cheese.

The Dairy Division has been investigating all the requirements to produce Roquefort cheese and it has been successful. At the Dairy Show this year it served Roquefort cheese made and cured in its own laboratories. The investigation with Roquefort cheese has been thorough and the quality of cheese brought to the Dairy Show indicates strongly that good Roquefort can be made commercially in this country and from cow's milk. This industry is full of promise for those capable of applying the principles and practices as worked out by the Dairy Division.

The work done with Roquefort cheese is highly commendable to those responsible for it and it should be appreciated by the dairy interests of this country.

BOYS' AND GIRLS' CLUBS

For several years advanced thinkers in agriculture have seen and understood the importance of interesting farm boys and girls in the possibilities of agriculture and home making. Much effort has been put forth to interest the farmer in a better system of operating his farm, but the success has not been highly encouraging. Men who have established ideas and practices are not easily moved to adopt new methods. They prefer to continue as they were taught when young.

Boys and girls have open minds and for this reason our educators are endeavoring to organize them for the purpose of studying some phase of agriculture. The hope of agriculture lies with the children of plastic minds and a desire for information. Calf, pig, corn, canning, chicken, etc., clubs have been formed rapidly during the past few years. Our government, as a war measure, is providing leaders in counties for the purpose of directing the efforts of our young people.

It is important to teach a boy how to raise a calf properly and it is of still greater importance to give him the responsibility of rearing it. The pride of ownership naturally leads him to seek and desire information regarding breeding, feeding, and caring for his animal. Such work reveals to the boy the meaning and value of true education. Likewise the girl, in her club work, is taught not only useful work, but she is led to understand the principles of home making.

We see great possibilities in boys' and girls' club work if it is properly directed, for every activity of the farm holds wholesome and valuable lessons for our young people.

BUTTER PRICES

In October the prices of butter advanced very rapidly. This alarmed some engaged in the handling of butter and the United States Food Administration. So far as we can learn, the advance in the price of butter was not due to any manipulation of the butter market, but to a large demand and a small supply. The increase in price was but a natural result of conditions.

Mr. W. B. Liverance, who sends us comments upon the butter market of the East, states: "The consumer has lessened his demand for butter. * * * There is a point above which the consumer, regardless of how prosperous he may be, will not go in buying butter."

It is plain that the price of butter is governed by the same forces that regulate the selling prices of most of our food products. The consumer has his own conception regarding prices he is willing to pay for food. He begins to curtail consumption when the prices seem too high. Then follows a decrease in prices, maybe but for a short period, and then they proceed to advance until the supply holds them at a level which the consumer will sustain. Butter dropped 5 cents a pound in October, but has advanced since to some extent. It would seem that unless the supply decreases materially the price of butter will not reach one dollar a pound as some thought it would.

There may be observed, in the increase and decrease in the prices of butter, the consumer's power over prices. The moment the market does not absorb a product at a certain price there is a decline in the price. On the other hand, when the demand is larger than the supply the price advances. We should keep this ever in mind.

FRENCHMAN CARES FOR COWS

A member of the American Red Cross, now serving in France, in writing to his brother, in substance said:

"Our American Red Cross is caring for a great many children from war districts. Cows are hard to find and cost about 1,500 francs or nearly $300 each. He said they were poor in type and of decidedly mixed ancestry. He states that the French people are horrified to learn that the American dairymen leave their cows out in the rain. The Red Cross at Lyons bought three cows of a farmer and the day he delivered them there was a light summer shower and the French farmer carefully blanketed all the cows and held an umbrella over the head of his favorite. He also states that dairying is looked upon as pre-eminently a woman's work and that few men, even among the farmers, know how to milk."

The French farmer in protecting his cattle from rain indicates that he gives them good care and attention. His example in this respect may profitably be followed by many of our American dairymen who do not give their cattle the treatment they should have. It is not uncommon to find herds exposed to cold rains, to cold winds, and often to snow storms, all of which are not conducive to milk production. From what we gather as to the breeding of cattle, we believe on the whole that the American dairyman has paid more attention to this than the French, but we are inclined to feel the foreign dairyman gives his cows better care than does the American dairyman.

It is perhaps well that we draw no further lessons from this news item for if we did it i mean pointing out the opportunity for more .r ican women to interest themselves in carir cows. The American farmer has not made as use of woman help in the field and in the b has the foreigner, but if the war keeps u quite possible that more American wives wi themselves capable milkers.

Let not the American farm woman take th seriously for the war will soon be over ar milking machine and the chivalry of the Am husbands will save them.

AN ARMY DAIRY HERD

The government has not been successful of its cantonments or army schools in securi adequate supply of milk for its soldiers. For Oklahoma, has been forced to establish it dairy herd in order to provide the boys in tr there with milk. The farmers have been p cents a gallon (15 cents a quart) wholesa milk, but this price did not bring enough Captain Whitmarsh has been detailed by the manding officer of Fort Sill to purchase e cows to supply 350 gallons of milk daily. E Mr. McDowell of the Frisco Railroad came t consin for these cattle.

These men informed us that the gover would rather purchase milk than to produce i when 15 cents a quart wholesale did not bri adequate supply it was decided to buy cow produce the milk required by the soldiers a Sill.

The necessity and importance of milk is realized by those responsible for the rations soldiers. Up to this present war our gover made no great effort to supply its army with products. Now most of the soldiers are given lowance of butter, cheese, and milk. The ar tion does not contain cheese, and it is our o that it does not include milk or butter, but products are now to be provided to some ext not in liberal amounts. Those who have u larger consumption of dairy products beca their food value and importance to health ma claim some credit for a larger use of these pr in the army.

It is not out of order to call attention to th that 15 cents a quart wholesale did not le farmers in Oklahoma to produce a sufficient of milk for the soldiers at Fort Sill. This sit indicates that the present wholesale price o is none too high, if an adequate supply is maintained. The bulk of the milk used for consumption is being sold by the farmers at 8.5 cents a quart wholesale.

UNITED WAR WORK

Seven organizations engaged in war wor united in a canvass to raise 250,000,000. canvass is on now and will continue to Nov 18th. These organizations are the Y. M. C. W. C. A., K. C., Jewish Welfare Board, War Community Service, American Library A tion, and Salvation Army. All these insti have been recognized by our government a rendering a most useful service to our boys. They have built hundreds, yes thousa places, called huts, really homes, for our s serving in foreign lands. These huts bring boys the touch of home; the comforts wh mothers and fathers desire to have exten their boys.

We heard a soldier make this remark abo huts and the service these seven organizatio rendering: "You cannot imagine our feelin the huts which are built and conducted by M. C. A. and the kindred organizations. Th the only places where we receive the to home. We may have lived for weeks like g or we may haye lived in the open exposed t wind, and cold, and the only places where warm ourselves, dry our clothes, and rece real touch of home is in one of these huts. could not go on without them. They no bring us physical comforts, but they have lifting influence which cannot be estimated.

General Pershing has said: "I would have 900 soldiers who have had the care and tion offered by the Y. M. C. A., the K. C., a kindred organizations, than 1,000 boys wh been deprived of this service."

The end of the war is in sight, but the rendered by these seven organizations needed more the coming year than in the p will take at least 18 months after the war to bring our boys home and some will be there" for several years after hostilities ce

t our sacred duty to give to these organiza-
s which are bringing the touch of home to our
s which are making better men and better sol-
of them; which are bringing physical com-
s nd a moral uplift to those who have served
faithfully.

Straw for Silage

anyone ever tried oat or wheat straw for
silos? I think I will try it in a small way,
st want to ask if by cutting fine, adding
of water, and packing well one could not
a good filler at least. I have two silos, one
d one 225 tons. I have used cane, corn,
and feterita with success.
ahachie, Tex. R. K. E.

would hesitate to recommend the ensiling of
even though plenty of water is used and the
is well packed. We apprehend that instead
ming good silage, one would only secure a
of moldy, poor feed, and the straw would
een more valuable if fed dry. Even under
st of conditions, it is difficult to ensile the
rops with success, particularly if they have
nced to reach maturity and are dry. We
nown of no occasion where straw has been
ctorily ensiled, and would be pleased to hear
hose who may have tried it.

Advise Making Alfalfa Last

se make us a balanced ration. We have a
uality of pea straw, enough to carry us
h the winter; alfalfa hay to last us for two
; corn silage, barley, and oats and clover
xed. Bran is worth $38 a ton; oil meal, $60;
2c a bushel; barley, $1.74 per 100 lbs.
aunee, Wis. D. F. C.

would feed a small quantity of alfalfa hay
ay making it last as long as possible. We
r this would be a better system of feeding
use it in liberal quantities and have the sup-
e in about two months. We would also feed
f the pea straw and a liberal allowance of the
clover hay. About 30 lbs. of silage should be
each animal daily per thousand pounds live
. A mixture consisting of 400 lbs. ground
300 lbs. ground oats, and 100 lbs. oil meal
pplement the roughage very nicely for cows
ing average testing milk. We would feed
me pound of the combination for each 4 lbs.
produced. When bran and oats are about
ne in price, bran may be fed in the place of
it seems desirable. For cows producing less
) lbs. of milk daily, it may be wise to omit
meal from the mixture.

Maintaining Milk Flow

ou advise trying to maintain cows at max-
production—to which good pasturage has
t them—by increasing the grain allowance
he milk flow falls off with the declining pas-
even though that increase in grain means
grain in excess of the customary rule of
nd of grain to four to five pounds of milk?
ave just a few cows, almost all being grade
in their first milk period. On pasture these
gave from thirty to forty pounds per day.
this fall on a timothy meadow they again
l that production. Before that, and again
hen we are feeding excellent silage, and fair
hay, their production drops to from eighteen
ty pounds. We expect some falling off as
ge is supplanted by hay and silage, but
ems too much of a drop. One of our men
e grain too lightly, but we do not see the
feeding more grain when the milk produc-
so light. The first time the cows went on
ge, we increased the grain allowance as the
w went up. This second pasturage on tim-
e did not increase the grain allowance,
was then about four pounds per day, but the
oduction went up just the same.
Aurora, N. Y. H. D. R.

e cows have freshened recently it is highly
le to try to maintain their flows of milk
anged from pasture to barn feeding. If the
e permitted to shrink in their milk flow it is
ubtful whether increasing the feed would
em back to their production on pasture and
l, it is still doubtful whether the increase in
uld pay for the feed consumed.
of the essential principles in feeding is to
ws to their full flow of milk for when per-
to shrink in milk production it is difficult to
them to their normal or original production.
cows are fed very well when taken from
sture, there is usually a slight decrease in
roduction but under the right system of
and care only the normal decrease will fol-
en taken from grass and put in the stable.
her cows giving less than 20 lbs. of milk daily should receive grain depends upon the price received for the milk, the percentage of fat in the milk, and the character of roughage. If there is an abundant supply of good legume hay, like clover or alfalfa, and an abundance of silage or roots, it is often more profitable to feed no grain to cows giving less than 20 lbs. of milk daily.

If the prices of feeds are not relatively higher than the prices of dairy products and the cows are somewhat thin in flesh and it is highly desirable to bring them back to good physical condition and sustain a flow of 20 lbs. of milk daily, then some grain may be profitably fed such animals.

Cows Like Sunflower Silage

I planted sunflowers with the corn for silage last spring, putting in about 10 per cent of the sunflowers, but this seed grew much better than the corn and also the sunflowers made a much larger growth so that in some places perhaps 25 per cent of the volume is of sunflowers. I have understood that this makes a more nearly balanced feed than corn alone and that less protein roughage is required with silage of such a mixture. How is this?

I am agreeably disappointed in the way the cows eat this feed. I was apprehensive that the coarse stalks of the sunflowers would be left, but the cows nose the leaves of the corn and sunflowers away and search out the coarser parts, seeming to relish the stalks best. We began running this green stuff through the cutter and feeding it three weeks before starting to fill the silo and it has all been cleaned up from the first. Even the large butts, some of them two inches in diameter, when broken up in the cutter are readily eaten.

I would like to know the analysis of sunflower silage so as to determine a proper grain mixture, and also if it will be advisable to depend partially on this silage as a substitute for clover hay, as the latter is a little short .

Fennville, Mich. E. H.

There are no analyses of sunflower silage available. Feeding experiments which have been conducted at the Montana Agricultural Experiment Station indicate that the sunflower silage has nearly, if not quite, the same feeding value as corn silage.

At this station they found that one pound of choice clover hay was equal to 3¾ pounds of sunflower silage when fed in connection with a grain mixture consisting of 5 parts oats, 2 parts malt sprouts, and 3 parts bran. This, of course, is not an ideal comparison as we question whether it is proper to compare a carbohydrate feed, like sunflower silage, with a high protein feed like clover hay.

According to such information as is available we would feed the same grain mixture with sunflower silage as we would with corn silage. Later investigations may disclose that sunflower silage has a higher protein content than corn silage, but there is nothing in our present knowledge of these two feeds which would lead us to expect such a condition, except that chemical analyses give green sunflowers a crude protein content of 3.6% as compared with 1.9% for green corn fodder. There have been no digestion trials with sunflowers, but assuming a higher digestion co-efficient for sunflowers than for corn, Henry's "Feeds and Feeding" gives the following as the number of pounds of digestible nutrients found in 100 pounds of these two fodders:

	Protein Lbs.	Carbohydrates Lbs.	Fat Lbs.
Green sunflowers (whole plant)	2.2	10.7	1.3
Green corn fodder	1.9	12.8	0.4

These analyses would indicate a decidedly higher feeding value for green sunflowers than for corn fodder, but the previously mentioned trial at the Montana Station does not seem to warrant this conclusion. It is also to be remembered that the figures given for sunflowers are based on only three analyses and an assumed digestion co-efficient, while for corn fodder there were 708 analyses and several actual digestion trials to determine the digestion co-efficient.

Barley and Bran Cheapest Feeds

Please give me a balanced ration for my Guernsey cows from the following feeds: Feed on hand: Oats, 70c per bu.; barley, 90c; corn, $1.25; roughage: silage, a little alfalfa, some clover and timothy hay. I can buy oil meal at $62 per ton; Krause Dairy Feed, $62; Amco Dairy Feed, $60.25; sucrene dairy feed, $46.75; bran, $35.

Sinsinawa, Wis. F. R.

We would suggest letting each cow have daily about 30 lbs. of corn silage and a little alfalfa hay supplemented with the clover and timothy. We would try to make the alfalfa hay last as long as possible and feed no more than three or four pounds daily.

Barley and bran are the cheapest feeds mentioned and in view of this, we would advise their use rather liberally. We suggest a mixture of 400 lbs. ground barley, 200 lbs. bran, 100 lbs. ground oats, and 100 lbs. oil meal. We would feed about one pound of this mixture for each four pounds of milk produced. It might we well in some cases to feed one pound for each 3½ pounds of milk yielded by each cow. In other words, we would feed around 7 lbs. of grain to an animal giving 24 lbs. of average Guernsey milk. This is not heavy grain feeding but we believe, as a rule, that this allowance at the present prices of feed is the most profitable.

Ensiling or Shredding Corn Stover

We had a silo which blew down and was unable to get help at the proper time to reconstruct or to fill silo if rebuilt. Conditions are now changed somewhat, but we have our corn cut and shocked. We have a shredder but no cutter. The question arises if we can gain anything by rebuilding silo and filling the same with the dry fodder, as against shredding and wetting the dry fodder and letting it lay a week before feeding.

St. Joseph, Mo. F. P. H.

We can see no advantage in ensiling the dry fodder over the system of shredding and handling it as indicated. However, the silo filling can all be done at one time and if it is inconvenient to shred the corn stover, say once a week, it might be found preferable and desirable to adopt the other system. Should it be decided to fill the silo with the cut stover, it will be found necessary to add about an equal weight of water in order to insure the proper packing of the silage and that it will come out in good, palatable shape.

The Cow's Keeper

The superintendent of a boys' school, where a dairy herd is maintained and is cared for by the students, recently asked us for an "authoritative word which we can use to impress upon our boys the necessity of carefulness, quietness, and gentleness in handling the cows." Thinking that possibly our reply may be of interest to others, we reprint it below, although it is a somewhat more intimate and personal statement than we usually publish. We said:

"Possibly the best word we can give the boys is to quote the following "Notice to help" which Ex-Governor Hoard, the Senior Editor of Hoard's Dairyman, keeps posted before the men doing the work on his farm:

"The rule to be observed in this stable at all times toward the cattle, young or old, is that of patience and kindness. A man's usefulness in a herd ceases at once when he loses his temper and bestows rough usage. Men must be patient. Cattle are not reasoning beings. Remember that this is the Home of Mothers. Treat each cow as a mother should be treated. The giving of milk is a function of motherhood; rough treatment lessens the flow. That injures me as well as the cow. Always keep these ideas in mind when dealing with my cattle."

Many years ago, in his lecture on "The Dairy Temperament of Cows", Mr. Hoard said:

"Now, my friends, you and I very little understand the wonderful connection between the nervous machinery and the mammary function; if we did understand it better, we would use this gentle mother a great deal better. No finer truth was ever uttered than that expressed by Mr. W. C. White of Wisconsin, a man who illustrated in his person the sweetest elements of human nature,—the most successful dairyman that ever appeared in our state. When asked how he treated his cows, he said: 'I always speak to a cow as I would to a lady.' A great many men reverse it, and speak to ladies as they would to a cow. But, my friends, the man who is lacking in respect for the motherhood of either does not deserve either."

Let the boys understand that a cow is a mother, that she needs the care and comforts of motherhood if she is to do her best. No true dairyman believes the dairy cow can rough it and perform her function to the highest degree. She must receive the treatment her function demands or low production of milk will follow. The cow is honest and does the very best she can with her talents and the care she receives from her owner.

There is a tendency upon the part of all of us to overlook little things but it is the little things that make the difference between profit or loss—success or failure. See to it that your cows are well fed, it pays. See to it that your cows are comfortable and well kept, it pays. See to it that

An Unusual Opportunity

to buy

100 Head of Guaranteed, Healthy Registered Holsteins

of Excellent Breeding and

585 ACRES

of Fertile Land

with 1000 feet of lake frontage in Waukesha County, Wisconsin, 18 miles from Milwaukee.

Buildings and machinery modern and in good condition. 150 tons of fine alfalfa hay, 500 tons silage and other feed included, also I. H. C. Tractor and 3 ton Truck. This proposition will be sold for one-half actual cost on easy terms on account of owners removal to New York.

J. G. Hickcox, 418 E. North Ave., Milwaukee, Wis.

your cows are known to you as individuals and that they have a place in your affection, it pays. See to it that all the little things around the barn are done well, it pays. See to it that kindness and intelligence govern your every action in caring for your cows, it pays. The man who does not think it worth the very best there is in him is not worthy of farming.

It is not uncommon to hear the dairy cow spoken of as a machine. Barring the injustice this does to the cow as a sentient, intelligent, and responsive being, there is considerable justification for applying this antonym to her for in many respects she responds to the definition and purposes of a machine—so wonderfully is she designed, so carefully is she constructed, so delicately is she adjusted.

When we consider the dairy cow from the machine point of view we find many similar conditions. She is marvelous in construction; has a nerve force, closely allied to electricity, which separates, combines, and transforms crude raw material into a refined and useful product; she has been developed by intelligent breeding and feeding from practical worthlessness to great and constantly increasing efficiency; she is thoroughly responsive to human sympathy and humane treatment from day to day and year to year; her productive capacity is largely governed by the care she receives and the feed given her. When we consider and compare these resemblances we begin to realize that the man behind the cow is a most important factor in dairy husbandry in developing and maintaining the efficiency of the dairy cow.

Dairy Contest at Kansas Fair

Fourteen cows were entered in a three-day butterfat test at the Kansas State Fair. H. M. Jones superintended the contest. The sweepstakes winner was Omega Luscke Hengerveld owned by the Cass Farm Company, Iowa. The winners in the several classes are listed below:

Class	Winner	Owner
Holstein over three years	Omega Luscke Hengerveld	Cass Farm Co., Iowa
Holstein under three years	Korndyke Gerben DeKol	N. H. Holdeman, K
Jersey over three years	Rural Bluebelle	R. A. Gilland, Kansas
Jersey under three years	Interested Owl's Grace	R. A. Gilland, Kansas
Guernsey over three years	Imp. Herival's Bettie	Dairyland Farm, Iowa
Guernsey under three years	Princess Euphemia	Dairyland Farm, Iowa
Ayrshire over three years	Lina's Beauty	O. H. Peverill, Iowa
Ayrshire under three years	Good Gifts Nona	O. H. Peverill, Iowa

Virginia Holsteins Make Good Records

The Virginia Polytechnic Institute announces the following new records:

V. P. I. Norma Veeman II completed a yearly record on September 30th, 1918, producing 15,240 pounds of milk containing 491.8 lbs. fat, which is a new state record for milk production for junior two-year-old heifers. V. P. I. Norma Veeman II is sired by Star Farm Johanna Lad and is out of V. P. I. Norma Veeman. Star Farm Johanna Lad was used in the V. P. I. herd with great success, having sired 12 daughters that averaged 467 pounds fat per year. All these were heifers with first calf, except two. The Dairy Division of the U. S. Department of Agriculture has selected the above sire for the breeding work at Beltsville, Maryland.

V. P. I. Javoca DeKol Korndyke completed a yearly record on October 24th, 1918, producing 15,617 pounds of milk containing 556.2 lbs. fat, which is a new state record for both milk and fat production for senior two-year-old heifers, all breeds. V. P. I. Javoca DeKol Korndyke is the first daughter of Virginia Korndyke Butter Boy to complete a yearly record. If V. P. I. Javoca DeKol Korndyke's record is any indication of this sire's merit—and we have good reason to believe that it is—he is a worthy sire for the V. P. I. herd, which h the following world's records for leges and experiment stations:

One cow has a yearly record 927.2 lbs. fat.

Three cows have an average ye record of 821.6 lbs. fat.

Six cows have an average ye record of 744.8 lbs. fat.

Ten cows have an average ye record of 664 lbs. fat.

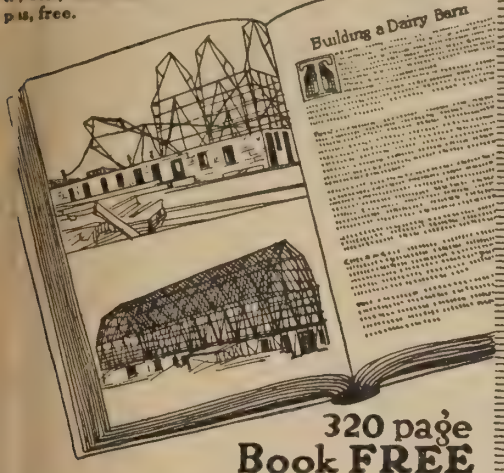
Eighteen cows, or the entire h including 4 mature records, 2 i year-old records, 2 three-year-old ords, and 10 two-year-old rec have an average yearly record 570.4 lbs. fat.—R. E. HUNT, Pr sor of Animal Husbandry.

Massachusetts Guernsey Bree Consignment Sale

Seventeen thousand one hun twenty dollars for sixty-six hea the history of the first annual signment sale of the Massachu Guernsey Breeders' Association, at the New England fair gro Worcester, Mass., on Thursday, tober 24, 1918. The eighteen cow eraged $258.44, the thirty-one he averaged $316.93, the seventeen averaged $154.41, and the ave for the sixty-six head was $2 The sale was topped by Langw Yuletide 64987, consigned by Jo Ames, Massachusetts, and purch for $1,250 by the Oaks Farm, M chusetts. Langwater Yuletide is a three-year-old heifer, a dau of Langwater Advocate 20514, a granddaughter by her dam, of Dimple's May King of Langw 12997, being out of Langwater cess Rhea 32287. She dropped he calf February 5, 1918, and was s in April by Langwater Wa 26509. She is now on Advanced ister test in class F, and in months has produced 5,123.2 p of milk and 231.34 pounds of b fat.

The highest priced bull was a t month-old calf sired by Lang Steadfast 31672 and out of La ter Lily 26606. He is a half br to Langwater Warrior 26509 premier herd bull at Lang Farms, both being out of the dam. Langwater Steadfast 31 the second herd sire at Lang Farms, and is a son of Lang Dairymaid 26377. This bull ca consigned by F. L. Ames, Mas setts, and purchased for $655 by Burnham, Massachusetts.

Cattle were purchased by t two buyers from Massachusetts, necticut, Rhode Island, Vermont York, and New Jersey. Only teen head were sold to breeder side of Massachusetts. The bu the greatest number was A. C. ham, Massachusetts, who pur seven head, five of which were Edward Porter May, Massach purchased one bull, one cow, and heifers.



The consignment of five anim F. L. Ames brought the avera $756, which was the highest a received by any of the fifteen co ors. John S. Ames sold four he an average of $740.

The sale was conducted by Herrick, Massachusetts, and C George Bain and Colonel La were the auctioneers.

NOW BOYS and GIRLS DO MEN'S WORK— With James Equipment

Throughout this land upon the farms, thousands of boys and girls have taken upon themselves the work of men who are at war. Boys too young to don their country's uniform, girls too young for army nurses, have put on overalls to serve the nation.
In dairy barns they milk, clean the stable, feed and water cows—do work that before the war none would ask of children so young.

But in the barns that are James Equipped the task is not too great for children's strength; for James Equipment makes barn work easy. The easy running James Carriers make chore time almost play time, turning a disagreeable, dirty task into a near pleasure.

The James Carrier makes a boy's job of what used to be shirked by all and is an investment that pays a profit of 25% or more a year in labor saved.

James Scrapers make quick work of cleaning up cement floors; the James Stanchions keep stalls and cows clean, by lining up cows at the rear, so that manure falls in the gutter and not on the standing platform; and the James Swinging Sure-stop saves time and trouble.

The James Feed Truck or Feed Carrier saves much walking to and from feed rooms,—makes unnecessary the lifting of heavy baskets of feed.

James Drinking Cups

not only save time—cows have fresh water before them day and night—but they do away with the nuisance of tending bothersome tank heaters in blizzardy weather; save fuel expense; and on top of that increase milk yields.

Drinking cups earn 200% and more a year on their cost.

And so with other James Equipment—stalls, steel pens for cows, calves and bulls, ventilators, bull staffs, mangers, swinging cranes, and milk can carriers.

Free Book

The 320-page book "The Jamesway" tells all about these James inventions that save labor, increase milk yields, promote better cow health and prevent spread of disease, protect against dangerous bulls and make simpler the care of calves and sick cows.

Easy Installation

It explains the easy way of putting up carriers, erecting the stalls and pens, and attaching drinking cups. Skilled help is not required.

Barn Plan Service

It tells about the James barn plan service; the James barn experts who know what has been successful and what has not; what not to do as well as what to do in planning convenient, money saving barns.

Their advice on barn planning, ventilation and other barn problems is free. No charge for floor plans.

Let James Equipment solve your labor problem. Send for the book—mail the coupon now—get full details of how you can cut barn work in half and make more milk.

SHERWIN

THIS trade-mark has stood for quality for over 50 years. It has won your confidence because it has never appeared upon a product of doubtful worth. This confidence of yours is the most valuable thing we possess—so valuable that we go to any lengths to maintain the standard in our products which you have learned to expect.

To this end we have made ourselves independent of outside sources for all raw materials that affect quality. Our zinc and lead mines, our linseed oil plant, and more recently, our dye plants—built to maintain the integrity of our colors—all serve the single purpose of justifying your faith in

WILLIAMS PRODUCTS

The Dye Plant of
THE SHERWIN-WILLIAMS CO.
Built in its entirety since the beginning of the war

This entire dye plant built since the war to supply our color needs

OLOR is an important factor in the production of paints. Since the beginning of our business, we have studied color production and when War broke out had developed it to a high degree of efficiency.

The cutting off of certain dyes from Germany, essary in making many of our most important ors; emphasized our failure to control our color supply at the *source*, as we did practically all other vital ingredients. To remedy this fault, we organized a color production industry at Chicago second to none in America. This industry, under expert chemists, has grown by leaps and bounds until, in three years, it has reached its present proportions.

This remarkable achievement is just an illustration of the advantages that The Sherwin-Williams organization places at your disposal when you buy any product bearing our trade-mark.

Tri-County Holstein

Breeders' Sale

Dixon, Illinois

Nov. 26-27, 1918

150 REGISTERED HOLSTEINS 150

25 Bulls—125 Females

This offering is made up of consignments from some of the very best Holstein herds in the state. It includes representatives from the best producing families of the breed—choice cows and heifers many of them with good A. R. O. records. A good many of these females are close to freshening from the service of excellent bulls.

Public Sale

of Great Long Distance Breeding in Holsteins at

Homestead Farm, Dover, Del.

November 20, 1918

43 head of excellent individuals with splendid A. R. O. backing. Most of the females old enough are safely bred to the senior sire of our herd, FINDERNE PRIDE FAYNE NO. 84452, who already has 7 A. R. O. daughters, one 3-year-old, 26 pounds, whose dam, FINDERNE PRIDE JOHANNA RUE, has an official record of 36.87 lbs. of butter in 7 days, with a test of 4.26%, 28,403.7 lbs. of milk, testing 4.14% fat and 1,470.5 lbs. of butter in 365 days, a world's record when made.

His sire, KING HENGERVELD AAGGIE FAYNE, is the sire of a 37.34-lb. 3-year-old, who also has a record of 1,395 lbs. of butter in a year, and of 4 others above 35 lbs.

This is the popular blood of the day because it is based upon high production, high testing and long time records.

Good Hotel accommodations at Dover. Train leaving Philadelphia at 7:25 in the morning will get you at the farm in time for the sale.

For catalogue apply to the owner.

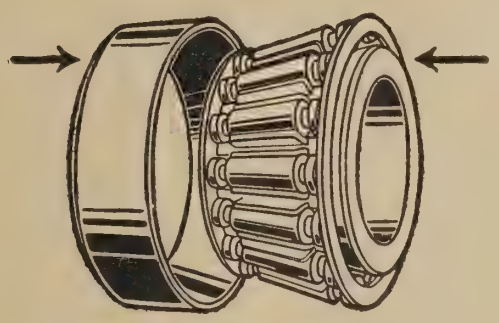
Daniel O. Hastings, Wilmington, Del.

REGISTERED HOLSTEIN SALE

East Grand Forks, Minn.

November 22nd, 1918

We Will Offer 65 Head of Pure-bred Holstein Cattle



M. L. Enright consigns 40 head; 15 young bulls and heifers sired by Sir Pietertje Ormsby Mercedes 41st, the only son of Springbrook Bess Burke and Sir Pietertje Ormsby Mercedes, and 20 cows and heifers, soon due to freshen, bred to him. He is the only sire in the world with a 30-pound dam that has three daughters which average 37 pounds butter in 7 days, two of them recently sold for $50,000, the highest price ever paid for two females. J. D. Bacon puts in 15 head of cows and heifers bred to a son of J. M. Hackney's famous sire, King Segis Pontiac Count. J. W. Coulter consigns his select herd of 9 females and one male. We are located outside of the Holstein belt so this is your opportunity to get Hackney and Schroeder Farms' world's record breeding at grade Holstein prices. For catalogues address

M. L. Enright, East Grand Forks, Minn.

Why Once a Year?

Inspect your tractor at least once a year to grind valves, tighten bolts and take up wear—and don't forget the bearings, for a little wear on bearings means a great deal of wear on other important tractor parts.

Timken Roller Bearings consist of a tapered cup, a tapered cone and a set of tapered rollers. The once a year take-up corrects looseness by advancing the cone a little further into the cup. The why and how of this take-up are told in the booklet F-81, "Timken Bearings for Farm Tractors." Write for your copy.

There are three bearing principles that we have continually impressed on the tractor user and builder:

1—All bearings wear.
2—Wear makes bearings looser.
3—Looseness is harmful unless corrected by some form of take-up.

Naturally, the tractor user asks—"How much wear is there?" Also, "How often does it really need to be taken up?"

How Much do Bearings Wear?

Bearing wear is extremely small. Fine measuring instruments would be needed to tell just *how much* the rollers had decreased in size after a hard season. And wear varies with use. Difficulty of service at bearing point doesn't matter much, because the *harder* the *service the bigger the bearing.*

How Often is Take-up Necessary?

Only once a year—between seasons if the bearings are Timken Roller Bearings. Once a year—because that's when all the other take-ups are made—motor main shaft bearings taken up—valves ground and adjusted—nuts tightened. Lots of Timkens could go through two or three seasons without it, but it's best to be on the safe side. You want to *know* that your bearings are new when you start the season.

Wear May Be Serious Though Unnoticed

Why do Timken Bearings need this take-up when other bearings are *said* to go on season after season without adjustment? The answer is that any good bearing properly installed and lubricated will continue to serve for several seasons, but wear is going on little by little all the time. They are wearing just as Timken Bearings would wear if adjustments were neglected.

Foresight is Better Than Hindsight

The big difference between most bearings and Timken Bearings is this: In the former, wear goes on without your knowing it, and without a chance to correct it. In Timken Bearings this wear is recognized. You know there is slight wear, and you can take it up as easily as you can make other tractor adjustments.

Bigger Things at Stake Than Bearings

Take-up puts new bearings on your tractor—but it does more. *It keeps the gears new.* That's one of the biggest jobs that Timken Bearings have to do in passenger car, truck or tractor. Take the case of new gears. Contact is rolling. Friction is a minimum. Gears running like this would wear for *years* longer than the ordinary gear.

Wear on Bearings Wears Out Gears

Suppose that the bearings wear just a little. There's a slight looseness. The teeth separate a little. Instead of rolling contact a little sliding contact is introduced. Friction increases. Teeth slide in and out of mesh. Wear becomes greater. Worst of all the shape of the teeth is changed.

Right here is apparent one of the biggest differences between Timken Bearings and other bearings.

If the wear goes on, the wear of tooth on tooth becomes a little greater. At the end of two or three years the gears are noisy—work hard—wear out rapidly.

But you don't want to wait till your gears are worn out before you know they're wearing.

Take-up Keeps Gears New

Of course, new bearings can be put in; but new bearings won't solve the problem, because the gears have worn with the bearings. New bearings wouldn't help. New bearings at this stage mean new gears always.

With take-up for wear there's quite a different story.

At the end of the first season when sliding, wearing tooth motion is just beginning, take-up puts the gears in mesh just as they were when new. Contact again becomes purely rolling. Teeth wear *in* shape—not *out* of shape. Gears as well as bearings are renewed.

Don't forget this:

—All bearings wear
—All gears wear

Timken Bearings wear just as long as *any* bearing before the first adjustment is necessary. Most important of all—other bearings need adjustment just as much as Timken Bearings, but have to work along the best they can without it because their construction does not permit the take-up that adds life to Timken Bearings.

TIMKEN BEARINGS

FOR MOTOR CAR, TRUCK & TRACTOR

HOARD'S DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

Two Boys at the Fair

"WELL, boys, get all your work done tonight if you want to go to the fair tomorrow with your mother and me. We're going to start early,—about eight o'clock."

The speaker, Mr. Barret, was a prosperous Minnesota dairyman living about 20 miles south of the Twin Cities,—Minneapolis and St. Paul. The state fair was on and almost every day for the past two weeks the boys had been at their father to promise them this trip.

"Im ready now," George answered at once. He was 14 years old, and while among the boys he was less a leader than his younger brother, he was very much a leader when it came to working at home. Dick was a good worker once he got started. He was an interested junior farmer, too, but there were so many good times to interest him that he was usually just a little behind his brother when it came to his share of the regular work.

"I'll be ready when you are, Dad," said the younger boy. "I've got to clean the barn yet. Was going to do it tomorrow morning but now I'll do it tonight."

He was as good as his word and before dark his work was as well done as his brother's.

The next morning both boys were up with the sun and by breakfast time had their chores done, whereas ordinarily there was at least an hour's work to be done after the morning meal.

"Well, you fellows sure are hustlers," said their father when all were gathered at the table. "How about the car? Are you sure there's plenty of gas, oil, and water in it?"

"Yes, sir. I looked after that last night," said George.

"Good enough. Then all that's left to be done is to get dressed. Wait a minute though; I almost forgot something. You boys have both been doing extra good work the last week or two so I guess you've got something extra coming." As he spoke Mr. Barret reached into his pocket and drew out some more money.

"Let's see. Dick, there's two dollars, and there's two for you, George. Oh yes, you both eat once in a while, too. We'll have to add a half dollar apiece for lunch. There you are. Now then, I'll see that you get in at the gate and after that the $2.50 will have to take care of you unless you spend some of your own money which I don't think is necessary."

"Well, Dad, suppose we don't spend all of this money, what then?" asked George, who was evidently figuring on having some left for another purpose.

"Do as you please with it, son, it's yours."

"Say, George, what's the idea of your asking Dad about the money we don't spend?" demanded Dick a little later when both boys were in their room changing their clothes.

"Oh, I just wanted to know," answered his brother. "There might be some of the money left, you know."

"Huh, bet there won't be any of mine left," said the younger boy.

Long before eight o'clock both boys were ready. They had the car out and waited impatiently for at least a half hour before their parents were ready to start. The twenty miles to the fair grounds were soon covered and it was still early when Mr. Barret parked his car among those of other early arrivals.

"You boys be back here at 4:30 sharp. Until then do as you please, only don't get into trouble," said he.

The boys were not slow in starting you may be sure. For a time they simply wandered about the grounds looking over the various exhibits, asking questions, and collecting as many free circulars and samples as they could. At the dairy barn George was inclined to spend plenty of time watching the preparations for the day's show. Dick was not so interested and before long the two separated, each to follow his own interests.

Nor did they meet again during the day. Apparently their interests lay apart, or if they did go to see the same things, they did so at different times. Promptly at half past four, however, both boys were at the car and neither had any complaint to offer at their early start for home.

"Well, you fellows must have been pretty busy today. I don't hear anyone say he wants to stay longer. Had a good time?" asked their father.

"Yes, sir," both answered as they took their seats, tired enough for once, so that they had nothing to say.

Supper was over and the evening chores finished before anything was said about the day's pleasure. Mr. Barret himself brought up the subject after they were all together in the big living room.

"Boys," said he, "I'd like to know what you did today,—what you saw and how you spent your money. The money was yours and the whole day was yours. I wanted you both to do exactly as you pleased and I hope you have, but I'd really like a report from each of you. I'm curious to know what kind of a good time you really had. Let's hear from you first, Dick."

"Well," returned the boy, "first thing George and I started out together. We went through the buildings and saw most all the exhibits. Then we went and saw the hogs, horses, and cattle. After that George stayed at the barns and I went up where the side shows were. Billie Gibson was there and we went to two shows together in the morning. We went through the war exhibit, too. Guess we spent an hour there. It was good; did you see it?"

"Yes, both your mother and I went to see it. We said at the time that it would interest you boys all right. I suppose it was about dinner time when you got there."

"Yes, sir, it was after noon before we got sat down to a dinner table in one of the lunch tents. After that we bought some candy and a cane, went to another show and then watched the horse races. I bought two tickets to the grandstand because all Billy's money was gone. And anyway he bought two boxes of candy and give me one. Guess that's all. Oh, yes, I got 40 cents left, too."

"Well, did you have a good time, Dick?" inquired his father.

"Did I? I should say I did," returned the lad.

"That's good. I hoped you would. Now then, George, how about you? Let's hear what you did."

"Well, sir, I didn't see everything that Dick did but I had a good time," replied the older boy. "After Dick got tired of looking at the cattle I stayed and watched the men get them ready to show. It was fun,—about the best thing I saw at the fair. Then I went over and watched them judge Guernseys for about an hour. Every time they'd get them lined up I'd guess which one I thought was best. Twice I got it right. I'd have liked it better though if I could have been down in the ring and known why that judge placed them the way he did. I'd like to know better how to judge dairy cows.

"I stayed around there till after 11 o'clock, I guess. Then I went over where they were running tractors. Say, but there was some dandies there. I could've stood round and watched them all day. I didn't though 'cause about noon the fellows that was running them quit and went to dinner. I went too, then."

"By the way," interrupted his father, "did you see any Guernseys that you liked?"

"I should say I did," returned the boy. "I liked most all of them but there was a bull there, a year old I guess, and a cow that was about six years old that sure would make a slick pair to start with. I'd be satisfied with them any time."

"All right. What did you do after dinner?" asked the father.

"Why right after I got through eating I went through the war exhibit, stayed there pretty near an hour and then went up in the grandstand to watch the races. Oh yes, I almost forgot, I bought some candy just before I went up to the stand. I stayed there till it was time to start home."

"I see. But how did it happen you didn't get to some of the shows?" inquired his father.

"I didn't have any time. I did think about going but I didn't get around to it. There was one show there I'd like to have seen," answered George.

"How about money? Did you have plenty?"

"Sure, I got $1.25 left that I didn't spend," said the boy.

"Well, boys, I suppose you're wondering why I asked you all these questions," said their father. "The fact of the matter is, I wanted to see what you really got out of the fair. Apparently both of you had a good time, which is right. You've earned it. I don't think Dick here got much else except perhaps a better idea of the war from the British exhibit. I believe though that George learned something about Guernseys and may be a little about tractors. I hope so because I bought four pure-bred Guernseys from one of the men showing there and I rather expect to buy a tractor some time this fall.

"I had hoped that both you boys would learn something about these things at the fair. It looks as if one of you did and the other did not. I know that Dick here will pick up plenty of information on both these subjects now that he knows what to expect to do, but I'm sorry he missed his opportunity today.

"Boys, a fair, if it's a good one, offers you a chance to study what is being done along the line of improved machinery, improved cattle, or better farming methods. It is a place where you can learn more about your business, because you're both junior farmers. Next time we go I want both of you to do two things: Learn what you can from the fair and have a good time. There is plenty of opportunity for both.

GRADE HOLSTEIN WITH TRIPLET CALVES

She has dropped six calves in two years—one heifer calf, twin heifer calves, and these triplets—two heifers and a bull.

OWNED BY ALBERT ASTIN, WISCONSIN

TO HOG-DOWN CORN IS TO EFFICIENTLY HARVEST THE CORN CROP

Junior Letters

Hoard's Dairyman Juniors:—As I have n written for quite a while I thought I wou write now. I have been so busy with far work that I have not had time to write and te about it.

I have two brothers in the army. Julius ha been in the army for over a year, and he ha been in France for over five months. He ha been fighting for three months but of cours

He gets a rest once in a while. He has been over the top several times, too. In the last letter he was in a hospital just getting well from influenza. Martin, my other brother, has been in the army since July 5, 1918. He is on his way across now. He is in the artillery and Julius is in the infantry. My father and I have done all the farm work since they left. We had an auction and sold 10 cows and some young stock and other things so that we could handle the farm better. We still have 28 head of cattle left, 18 of which are milk cows. We have 7 horses. Two of them are colts. The same mare that we had to the fair last year took first prize again this year and her colt took second prize. We had a few other prizes.

We filled silo a few weeks ago. We have not threshed yet but expect to soon. Our wheat is fine this year. We did not have much barley but we had quite a lot of wheat, oats, and rye.

We have a registered Holstein bull that is 10 months old. Our twin heifer calves are still doing fine. One is a brindle and the other is black, so they do not look much like twins.

I have not started to go to school yet, but expect to start as soon as we get through threshing, which will be about the 15th of October. I will be in the first year high school.

I have 10 War Savings Stamps so you see I am trying to help lick Kaiser Bill. My father has bought both liberty bonds and war savings stamps.

Well, I guess I will close, wishing success to the juniors. My address is Route 1, Glenwood City, Wis. Arthur W. Sorenson.

Hoard's Dairyman Juniors:—Have you forgotten this junior?

We have been hauling cattle almost all last week. We sold four pigs, nice big ones, but they were not so very fat. We sold them all for $250.

My calf is in good condition now. She is getting big and fat. Every time she sees me she will run to me and wants me to pet her.

We are milking seventeen cows, and one of them the calves are sucking.

We were filling silo a week ago Monday and Tuesday. We got it full to the top and had four loads left which we sold to our neighbor. After a day or two it had settled a couple of feet. It is all corn that was put in the silo.

We are all through threshing and got a thousand bushels of oats and 50 bushels of barley. This year we got all the oats we need and sold a little besides.

My sister, Mary, is going to training school this term to become a teacher.

It has been a bad day. It has rained a little all day.

I am milking four cows every morning and night and haul the milk to the cheese factory before I go to school.

I think it is time to close, wishing good luck to all the juniors. I wish the juniors would write to me. My address is Box 57, Ringle, Wisconsin. Chester Mortenson.

Hoard's Dairyman Juniors:—This is my second letter to the juniors. My brother and I both have our buttons, creeds, and fobs. We are very much interested in Hoard's Dairyman. I always read the letters from other juniors. I am 11 years old and my brother is 2 years younger and our young brother is 3 years old.

We live on a farm of 318 acres and have 5 cows and 4 calves. Some of them are Holsteins and we think they are the best. We go to school, the school being right on the farm although just now we are staying home to do the shocking. All the wheat is cut and some of the other grain. During the busy time I milk one or two cows. Owing to the dry spring early crops are not very good here but late crops are better because rain came in the summer. Soon we will be threshing and after that school till Xmas. We are in Southern Manitoba and days are very hot but nights are always cool. We would be glad to have some letters from other juniors. Our address is Hilton, Manitoba, Canada.

Fredrick and Harold Curtis.

Hoard's Dairyman Juniors:—I thought I would write you a letter and tell you what I have been doing this summer.

I am only twelve years old so I can not do very heavy work, but I can do some work with the team. I cut nearly all our grain and cut our neighbor's wheat. I cultivated the corn two or three times with the two-horse riding cultivator. My brother is in the navy so my father had no help but mine.

My mother and I had a garden together, and what she did not use she gave to me to sell as pay for my work. With the money I bought three War Savings Stamps and have one Thrift Stamp started on another one.

We have a registered Holstein sire and six cows. My father is trying to build up a Holstein herd. We have one ten-thousand-pound cow. My father weighs the milk and keeps a record of it. We have a milk tester at our school and the children from the different families bring samples of their milk and we test it. The children from the sixth grade up can test the milk without any help from the teacher. I am in the seventh grade. Just to show you that our little country school is not behind the times I am sending a language paper written about the fourth Liberty Loan.

I would like some of the juniors to write to me. My address is R. D. 1, Box 68, Whitehall, Mich. Warren M. Blank.

PERFECTION MILKER

Milks Like The Calf

PUT your finger in a calf's mouth and feel the way the calf milks. First it sucks gently. Next it squeezes downward with its tongue and the roof of its mouth. Then it stops sucking for a moment while it swallows, letting go of your finger and allowing the blood to flow freely.

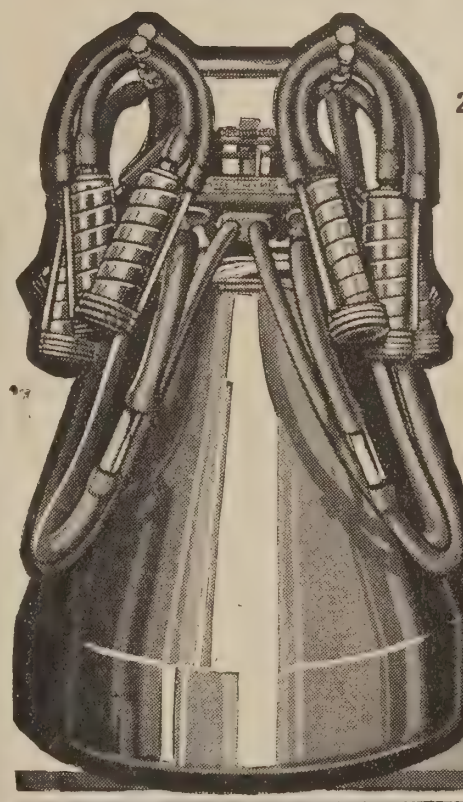
This is the natural, safe way to milk.

Now, put your finger in the Teat Cup of the Perfection Milker. Notice how it first applies a gentle, steady suction, second, squeezes downward, and third, completely releases your finger from the suction.

This is exactly the same way of milking as that used by the calf. It is Nature's Way—no wonder the cows like it.

Try this test yourself and you will see why such famous dairymen as Professor P. O. Holland, of St. Olaf College, Minnesota, and Clifford R. Plumb, of Bangor, New York, recognize the Perfection as the safest of all milkers and use it on their valuable cows.

The Teat Cup Is The Secret



Because of its exclusive patented Teat Cup, the Perfection is the mechanical milker which can milk exactly like the calf. Cows stand quietly for it and often give more milk.

Like every part of the Perfection, the Teat Cup is the result of years of experiment and study to make it the best thing of its kind in the world.

Get This Valuable Book Free

Whether you have a great many cows or only a few you should study the mechanical milker at this time. The world needs more milk. A good milch cow is worth twice what it was before the war.

Write us today for "What the Dairyman Wants To Know"—the book which answers every question you can ask about mechanical milkers and which shows you how you can keep more cows and make more money.

Present position includes successful management of one of the most extensive and prominent private estates in Ohio. Well qualified in construction, improvements, reclamation of soils and animals. Address BOX 302, care Hoard's Dairyman. 17-2

Married man wants position March first on large stock or dairy farm as working superintendent. Understand tractors, milking machine, handling of men and teams. What can you offer? Address BOX 300, care Hoard's Dairyman.

Ayrshire Two-year-old Leads Roll of Honor

The Roll of Honor records authorized at the last meeting of the Ayrshire Breeders' Association call for production and reproduction.

To qualify for Roll of Honor a cow must conform to all the requirements for her class in the Advanced Registry in a period of 300 days from and after day of entry instead of a year, and in addition must produce a living calf which she has carried for at least 180 days during the period.

The following cows have made the Roll of Honor:

Days in milk	Name	Days carried calf	Milk Lbs.	Fat Lbs.	Owner
300	Snowflake Auchenbrain	238	12,038	445.45	A. H. Higginson
300	Auchenbrain Favorite Beauty	188	11,730	467.85	Penshurst Farm
265	Finlayston Mable	201	10,605	413.78	Penshurst Farm
254	Princess Thelma	191	11,614	431.07	Penshurst Farm
300	Ryanogue Lady Peggy	216	13,058	534.50	Wendover Farm
300	Barkely's Flossy	209	8,566	328.24	Penshurst Farm
300	Beauty's Lady White	191	7,548	354.56	Friends Hospital
300	Netherton Crafty 5th	208	10,813	425.55	Penshurst Farm

C. H. JOHNSON, Vermont.

New Co-operative Creamery in Vermont

HOARD'S DAIRYMAN:— The farmers around Holland, Vt., are nearly ready for business in their new co-operative creamery plant. They completed their organization in July and since that time have been getting equipment together and looking for a manager. This organization was fortunate in being able to purchase a new creamery building at a reasonable price. Some of the equipment was purchased second hand at a low figure. Everything considered, these farmers have been very fortunate. It is expected that the equipment will be in place so that operations can soon begin.

This organization is a truly co-operative organization. Each shareholder has subscribed for stock to the amount of at least $5 per cow and any new patrons who deliver their products to the creamery when it begins operation, will be required to take out stock to the amount of at least $5 per cow and pay down one-half of this amount in cash, the remainder to be taken out of the cream checks at the rate of two cents per pound on butterfat until the stock is fully paid up. This is absolutely sound business for a co-operative organization.

This is the second co-operative creamery that has been organized this year through the efforts of the county agent. The farmers in these communities are beginning to realize that the Orleans County Agricultural Association can be of real benefit to them if they will make use of it.

C. H. JOHNSON.
Co. Agent.

Milk and Sugar

HOARD'S DAIRYMAN:—The annual consumption of sugar in the United States has in recent times amounted to about 90 lbs. per head of the population. At the present time there is a shortage and the allowance must be cut to a much smaller figure. This sugar deficit is due to two main factors—a decrease in production and a lack of transportation facilities.

Fom a nutritional standpoint sugar is not an absolute necessity as its main function when taken into the body is to provide energy and this duty can conveniently be performed by the starch and other carbohydrates in cereals and similar products. The main reason for the consumption of sugar is its flavor and consequent appetizing properties.

Many substitutes for cane and beet sugar have been offered, including the use of honey, syrup, molasses, fruits, and fruit juices. These serve a useful purpose, but one important factor—the consumption of more milk—has not received the attention to which it is entitled.

Milk contains about 5% of a sugar known as lactose or milk sugar, and though it is not as sweet to the taste it is quite as valuable for nutritive purposes as is cane sugar. The present government allowance of sugar for home use is 2 lbs. per person per month and this amount can also be supplied by a rather limited consumption of milk. Thirty quarts of milk contain three and a quarter pounds of milk sugar and consequently the consumption of from one to two pints per day forms an economical, wholesome, and convenient method of supplementing the government allowance of sugar.

Get the ORIGINAL

"An Imitation —be it Ever so Good— is Still an Imitation."

When you invest in a manure spreader you are buying an implement that ought to be the most profitable machine on your farm. It will be, if you profit by the experience of others and choose the machine that has stood the test of time. Buy the original, the machine which revolutionized old-fashioned methods, which has always been the leader in quality, in sales and in improvements. This machine is the

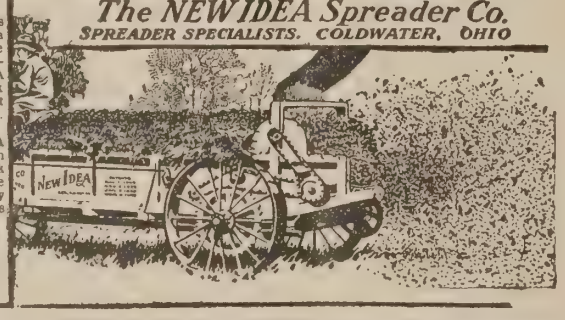
NEW IDEA
Registered U.S.Pat.Off.

Lowdown, light draft. Loads and pulls without undue strain on man or team. Has solid bottom with chain conveyors. Pulverizes thoroughly and spreads evenly. 5 to 7 ft. wide. Spreads from 3 to 15 loads per acre, at your option, by merely shifting a lever. Drives with heavy sprocket chain—no gears.

See the "New Idea" at your dealer's. Don't wait for him to see you as he is probably short of help. Insist on the "New Idea," and don't buy regrets by taking some other machine. If you don't know who sells the "New Idea," write us and we will give you his name. Get our Book—"Helping Mother Nature," which gives much new information about manure and soil fertility. (2)

We have found your Spreader to be most satisfactory. The light team, weighing only about 2000, handles it on practically all the farms.

The evenness and strength of the growth after top-dressing with your machine, shows it is a tool no farmer can afford to be without if he wants results. J. H. McCLUER.



Two years ago I bought one of your spreaders, last year I got a second one.

A good Manure Spreader is one of the best paying tools a man can have on a farm. We spread lime as well as manure with our NEW IDEA Spreaders. Would not think of running my farms without them. A. S. WELCH.

I have used your NEW IDEA Spreader for five years. Am so well pleased with the work it does, that I would not have any other. Has cost me only 30c for repairs and that was caused by my own neglect. P. I. WORTHINGTON

Story of a Co-operative Milk Plant

(Continued from first page.)

have to ship milk on our own account. With the three thousand all expenses were met from the treasury and a small balance remained.

While these events absorbed attention, someone had to be thinking about selling milk. It was said that no milk could be sold. It was found, however, that several concerns wanted milk. We were fortunate in entering the field at the opportune moment, and in having the headquarters of the League with us in organization and in selling. Of the various concerns that wanted milk, the Borden Dairy Products Company seemed to us to be the most desirable. They would take all of the milk from our two hundred farmers and contract to take it for six months at League prices, although the price had not been set beyond two months. The League would endorse the deal. The Bordens would install a pasteurizer and ship pasteurized milk, which would be of advantage to us at that season of the year. In addition to this we had too much to do on our farms to try to handle the plant ourselves, besides we lacked experience. The company would pay us a rental for use of the plant of $150 a month and we could rent the house for twenty more. We figured that we could meet expenses and pay a fair dividend to the stockholders from the start, and so the property was rented. It took a load off our shoulders and by the time the six months is out we may be more ready to conduct the creamery ourselves, particularly if we can contract the milk for a year with some good concern like the Bordens.

It is customary to allow fifteen to eighteen cents a can for handling at the creamery. If we average four hundred cans a day, and we will do better than that, we would get a substantial income in handling the business. It seems likely that we will do the best that way when we come to be fully ready for it.

We feel mightily encouraged on one point and that is the loyalty of our League members. Ninety-six would be taken on by the old concern that had caused us the trouble and that proposed to break up our organization. I do not think they are getting a half dozen. One funny thing about it all is the fact that now we have our plant and a market for our milk, the old concern has suddenly found out that they want milk too. They are begging for it and offering a bonus besides, I am told, but it is doubtful if they will win back our members and certainly not our confidence. They played a boy caper and no one can regret that they failed in their attack upon us.

Someone has observed that it requires a catastrophy or a calamity to bring about needed reforms. Be that as it may it is pretty certain that if the farmers who purchased the creamery on short notice, and so far as the general majority is concerned did it with comparative ease, nothing of the kind would have been done had not the creamery company in effect compelled it. Had there appeared a fair market for the milk prior to the purchase of the plant these farmers would have taken the market rather than the creamery. It is usually so. The question that comes to mind is how can such things be avoided. So far as I see they cannot be avoided. There are usually a few who see that some avenue of safety is needed long before it is possible to get any action started to provide something, but in most cases these are powerless to secure action on the part of the many.

In this case some initiative had been taken and this was wise. Something of the sort may be possible in

other communities even where not enough interest is taken to buy or build a plant. Last fall I wrote for Hoard's Dairyman a description of what we did in the way of buying a piece of property that was situated nicely for a creamery plant and was worth all we paid for it whether we should build or not. We then went at it and incorporated with a moderate capital and called in forty per cent of the subscriptions. In this way we were somewhat prepared when we had to do more. We had the organization and there was the sixty per cent of the subscriptions that might be called for at any time; besides, we had a property that might be sold or mortgaged if necessary. All this helped when we went at the new proposition described above. I would suggest to any community where there is some intention of owning a creamery sometime that an organization be formed if possible. Some property might be acquired and used for some purpose in most localities. About all that there is to do is to get ready as far as conditions will permit. It is small use to go further than sentiment of the community will uphold, and it is sometimes necessary to create sentiment. It cannot be done by force. Sentiment here was created by the pinching method that the milk dealers proposed to exert. It was ample and they did the farmers a service without so intending, and against the wishes of the community.

"Which Milking Machine is Best?"

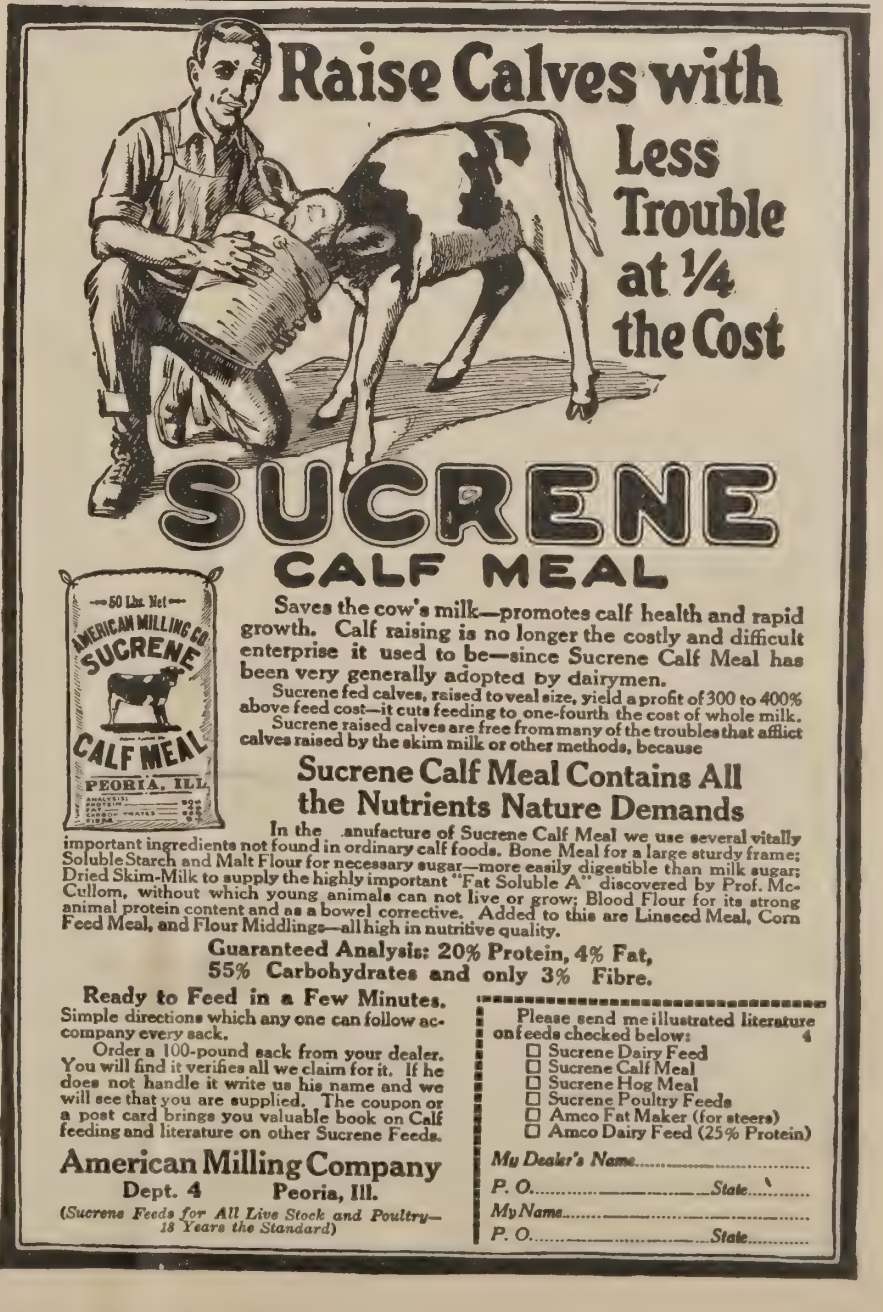
(Continued from page 547)

best machine for that herd.

Without such understanding, advice as to which is the best milking machine is of no certain value.

The above is said as a summary reply to the many inquiries received by me from readers of Hoard's Dairyman since my articles on milking machines were published in this valuable dairy farm journal.

Another Langwater Guernsey Makes Notable Record



Langwater Heroine 49483, owned by F. L. Ames, Massachusetts, recently completed a record of 16,221.1 lbs. milk and 805.64 lbs. fat, at the age of three and one-half years. This record has been exceeded by only two Guernseys in this division, Azucena's Pride 2d 24957 and Governor's Pauline 30472, and places Langwater Heroine 49483 in third place in Class D.

Langwater Heroine 49483 has a previous record made in Class G of 12363.9 lbs. of milk and 612.34 lbs. fat. She finished her first record on April 13, 1917, and calved again on July 12, 1917.

She is one of the last daughters of Imp. King of the May 9001 that has twenty-six daughters in the Advanced Register whose average production is 606 lbs. fat. Her dam is Langwater Hayes Rosie 24200 that has Advanced Register records of 453.16, 556.56, and 645.50 lbs. fat in Classes G, D, and A, respectively. She in turn is a daughter of Imp. Hayes Rosie 15476, one of the first cows to be tested for the Advanced Register, and produced 714.31 lbs. fat.

Langwater Heroine 49483 is a full sister to Langwater Hayes Rosie's King of the May 16723 that has eleven Advanced Register daughters whose average production is 528 lbs. fat. She is descended from an exceptional strain of producers and her owners believe she will soon equal the performance of her half-sister, Langwater Hope 27946, that produced in one year 1,003 lbs. fat.—AMERICAN GUERNSEY CATTLE CLUB.

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Depraved Appetite

Lately our milch cows have been eating and chewing old bones. I have thought that there was some necessary food that they need and which they are not getting. All that they have had to eat is oat stubble and timothy hay and what salt they need.

Wilson Creek, Wash. R. McD.

Semi-starvation is the cause in the cases mentioned and depraved appetite probably will subside after the cows have been generously fed a balanced ration for some time. Wheat bran should be freely supplied as one ingredient of the ration. In some instances the addition of bone meal or precipitated phosphate of lime is necessary to supply the lacking element in the feed.

Abortion

I have a Jersey cow that drops her calves. She dropped two and then gave birth to a matured calf and now she slinks again. Can I do anything to prevent it? Should she be bred right away or have a rest? Being a Jersey she is worth but little to fatten for beef.

Calhan, Colo. W. A. P.

Do not breed the cow sooner than six months from date of aborting. If you have only the one cow, we should advise you to let her go to the butcher and buy a new, healthy cow. If you prefer to treat her, have her womb cleaned by a veterinarian, then syringe out her vagina every other day for ten days with lukewarm water containing one teaspoonful of coal tar disinfectant to the quart and again, do this daily for two or three weeks before she is bred.

Barrenness

We shall be pleased to have you advise us with reference to the breeding of dairy cows. We have bred some cows as much as eight times and we can not get them to calve.

Wauwatosa, Wis. P. F.

Contagious abortion disease usually is present in such cases and the cows should be treated accordingly. See recent answers on barrenness and also abortion.

Feed Regulations in Great Britain

The effect of war on agriculture in Great Britain, is strikingly shown by regulations now in force affecting feeds and bedding. Among restrictions of unusual interest are the following:

The use of straw for bedding purposes is forbidden. Oat straw in particular may be used only for feeding purposes.

All persons owning horses entitled to limited supplies of hay, straw, chaff, and cereal feeding stuffs, must keep records showing the number and class of horses, and full facts regarding source, kind, and amount of feed used.

The occupier of an agricultural holding may not sell or part with the possession of any horse which is used or capable of being used, for the cultivation of the holding, except with the authority of a license.

When it is realized that these orders are necessary war measures, the importance of voluntary feed conservation in the United States is apparent. The U. S. Food Administration especially asks for elimination of all feed waste, and utilization of farm by-products to which little attention may have been paid in former years. During the year ending July 1, 1919, we must export 2,700,000 tons of feed grains (mostly army oats) overseas. This amount is 750,000 tons more than last year and must come from our present supplies.—U. S. Food Administration.

Clean Out Abortion
From Your Herd
IT CAN BE DONE BY THE PERSISTENT USE OF
Hood Farm Abortion Remedy
and
Hood Farm Breeding Powder
Hundreds of breeders have saved valuable cows and their calves by giving the Abortion Remedy promptly and freely on the first sign of abortion.
This Remedy strengthens the weak parts and helps hold the foetus. Its success has been remarkable.
Injection with Hood Farm Breeding Powder every day for 21 days before service, then every day for 21 days after service, destroys abortion germs, disinfects the organs and keeps cows in a normal, healthy breeding condition.
PRICES: Abortion Remedy, prepaid, $1.25, $2.75 and $9. Breeding Powder, prepaid, $1.15, $2.75 and $5. Injection Tube, by mail, 90 cents. One medium Breeding Powder, one medium Abortion Remedy, one Tube, prepaid, $5.75.

Wonderful Egg Producer
Any poultry raiser can easily double profits by doubling the egg production of hens. A scientific tonic has been discovered that revitalizes the flock and makes hens lay all the time. The tonic is called "More Eggs." Give your hens a few cents' worth of "More Eggs", and you will be amazed and delighted with results. A dollar's worth of "More Eggs" will double this year's production of eggs. So if you wish to try this great profit maker write E. J. Reefer, poultry expert, 4548 Reefer Bldg., Kansas City, Mo., who will send a seasons' supply of "More Eggs" Tonic for $1.00 (prepaid). So confident is Mr. Reefer of the results that a million dollar bank guarantees if you are not absolutely satisfied your dollar will be returned on request and "More Eggs" costs you nothing. Send at once today or ask Mr. Reefer for his free poultry book that tells the experience of a man who has made a fortune out of poultry.—Adv.

JERSEYS

Please Remember That

Jersey Crest Farms are in a position to furnish you with either matured bulls or bull calves, from heavy producing dams and sired by bulls whose records are a credit to the breed.

Not only are these calves and bulls bred from high producing families but they are properly grown. In the first place, our Herd is absolutely free from all contagious diseases, have never had a case of tuberculosis or abortion in our herd. Calves get their skimmilk until they are at least a year old, plenty of grain and clover hay. A good start in life means Success in the future, with both health and strength combined.

When you are looking for beauty, look for it in the offspring of the Jersey Crest Farms Herd. Visitors always welcome.
Jersey Crest Farms, Oconto Falls, Wis.

Burn Brae Jerseys

Bull calf dropped Dec. 5th, 1917
Sire:—Ibsen's Chief 135749, Majesty and Raleigh breeding. His dam has a record of 636 lbs. 10 oz. "Chief" won first as calf, yearling and two-year-old, two championships and Gold Medal. *Dam:—Oxford's Majesty's Chance 357046.* Now on test. Her dam is also a R. of M. cow. Other bull calves and bulls ready for light service. Guaranteed to please.
CHAS. A. PETERSON, Rosendale, Wis.

HEIFER FOR SALE

A daughter of Trials Noble of Oakland who was grand champion at Wisconsin State fair 1918. His dam has a R. of M. record of 563 lbs. butter. The dam of this heifer May of Oak Grove has a R. of M. record of 334.41 lbs. butter as a 2-year-old, advance test 6.2%. Heifer was dropped April 22, 1917, is solid color, black tongue and switch and is bred to a R. of M. son of Eagle's Chief.
Oak Grove Jersey Farm, Wm. M. Knight, Eagle, Wis.

13,036 lbs. MILK—720 lbs. FAT

is the average production of the grandams of our Owl-Interest bull calf No. B. 68, dropped April 20, 1918.

His sire is Sibley's Interested Prince, R. of M., who is transmitting the production and richness of his dam, 15,147 lbs. milk, 875 lbs. fat.

His dam is Mertha's Temisia, now on test, 3,128 lbs. milk, 163.8 lbs. fat in 3¼ months to date. Her dam made 10,925 lbs. milk, 565 lbs. fat at 11 years, 10 months old.

MOOSE HILL FARMS, Spencer, Massachusetts

For Sale: Carload Registered Jersey Females

Because we are over stocked we are offering for sale a carload of excellent Jersey cows and heifers, some fresh, the remainder due to freshen from time to time throughout the year. 15 of them daughters of "The Warden", a Tormentor-Eminent bred bull from a R. M. dam and himself with 33 daughters in the Register of Merit. 10 of them sired by "Pogiwarno", he a son of Pogis 75th of Hood Farm and from Lass 49th of Hood Farm with 488 lbs. fat to her credit in Class AA.

A part of these females are now in the Register of Merit. All are bred for production and individuality.

This is an exceptional opportunity. Write us at once or better still come and see what we are offering.
BRONDALE FARM, EAST HARDWICK, VERMONT.

HILLCREST JERSEYS

Write me for descriptions and prices on several head of officially tested cows. Also bull calves out of tested dams. Address

We Offer An Exceptional BULL CALF

Dropped in December 1917

Sired by Majesty Star out of a Register of Merit Dam. For particulars, address
FINCH FARM, - DAYTON, OHIO.

Prairiedale Holstein Dispersion

The dispersion of the Prairiedale herd of registered Holsteins at Dixon, Ill., October 3, furnishes abundant proof that there is an excellent demand for good Holsteins.

This was in several respects an unusually good herd. Established in 1903, a milk record for every cow had been kept since that time and for the past 4 years the herd had averaged over 10,000 lbs. per cow per year,—a remarkably good showing. Nor was official testing overlooked, every cow and heifer in milk had an A. R. O. record.

The fact that the entire herd, 75 animals, sold for $31,980, an average of over $426, shows that the dairy public is in the market for bred-for-production stock and is willing to pay for it.

Johanna DeKol Fairmont Maid, a 28.15-lb. 8-year-old cow, topped the sale at $1,110, going to Bert Irwin, Illinois. Second honors in the price list went to Colantha Creamelle Butterfly, a 4-year-old daughter of Dutchland Creamelle Korndyke Lad, with a 20.15-lb. 2-year-old record. She was purchased by W. R. Angle, Illinois, for $870.

Haeger and Perry did the selling with S. T. Wood in the box.

Edward A. Grombacher is Dead

Mr. Grombacher, who had charge of the Register of Merit Department of the American Jersey Cattle Club from June 15, 1914, to September 29, 1917, died of pneumonia on the 21st of October. He volunteered in the Naval Reserve upon the United States entering the war, but was not called for service until the 29th of September, 1917. After completing his training he sailed for foreign waters about the first of January, 1918, and from that time until his death he served faithfully in one of the hardest branches of the naval service, aboard a submarine-chaser operating in the Mediterranean. He died when his vessel was in Grecian waters, and has been buried in Greece.

Mr. Grombacher was educated at Rutgers Agricultural College, and before coming to the American Jersey Cattle Club was the inspector of test supervisors in the state of New Jersey. He was about twenty-five years old and unmarried.

Barrenness

I have had three heifers in my herd that do not calve. Have you any cure to suggest?
Amagansett, L. I. M. P. H.

As often stated here there is no specific remedy for barrenness and can be none as the causes of the condition are many and different. Some heifers are born barren, some of these are hermaphrodite, as for instance the female if twinned with a male is barren in a majority of cases. In other cases abnormal conditions are present in the vagina, neck of the womb, womb or ovaries, and the exact trouble has to be located and removed, if that proves possible. In many instances infection with the contagious abortion disease is the cause and that requires special treatment with disinfectants. We can only advise you to employ a trained veterinarian to give the special treatment he finds necessary.

Jersey Cattle Notes

For week ending Oct. 25, 1918:
Number of animals registered: Bulls, 137; cows, 362; total, 499. Number of transfers recorded: Bulls, 127; cows, 374; total, 501.

GUERNSEYS

Choice young bulls of exceptionally good Adv. Reg. breeding for sale. Strong individuals and just as represented. Dams milking from 40 to 55 pounds daily. Could spare a few young cows.
Write for pedigrees and prices.

OTTO W. POST, R. R. Station Owasco Lake, Ensenore, New York.

One of Our Good Cows

with a record of 579 lbs. fat recently dropped a bull calf whose sire's dam made 721 lbs. fat. Individually this calf and his dam are rather good and indeed a pedigree of the calf shows that his ancestry is mainly the really good kind. Nicely marked and colored. Price here, $150. Pedigree sent on request.

W. R. DUNLOP, Fayetteville, New York.

May King of Columbia No. 34549

Our head sire is a double grandson of Barrington's May King No. 19312, purchased by U. S. Government. The average records of his daughters with first calf not only exceed the average first calf records of daughters of his grandsire, Imp. May Rose King but also the average first calf records of daughters of sons and other grand sons of Imp. May Rose King. (See page 4 of Guernsey Breeders' Journal July 1, 1918.) For Sale—young cows in calf to Columbia, also an occasional bull calf by him. Tuberculin tested, abortion free herd.

Kathergay Farms, L. W. Sheldon, Manager, Fulton, New York.

Edgewater Farms

Has been the home of such noted Guernseys, as Cherry of Edgewater, Miranda of Edgewater, White Wing of Edgewater, Imp. Queen Regent 4th, Imp. Topsey de Carteret, Miranda of Mapleton, Nellie Tostevin of Mapleton 3rd, The Great Bull Imp. Holden 4th and many other noted animals. We are offering a few choice Bull Calves. **F. G. Benham & Son, Canandaigua, N. Y.**

For Sale—Registered Holsteins

We still have left two young bulls, excellent breeding, one about eight months old, the other about eleven mos. old, backed by splendid seven day as well as yearly records. Also four beautiful heifers, two of them about 18 months old, sired by Johanna King Segis the 40-lb. sire and out of a good A. R. O. dam. Another one about thirteen months old, her dam a show cow; sired by a 30-lb. sire. Another one about a year old, granddaughter of the $15,000 Sire. Very classy stuff. Must sell because of shortage of feed. Breeders, not dealers.

Elm Leaf Stock Farm, Bear Creek, Waupaca County, Wis.
James McKone, Prop. William Lucia, Mgr.

By 35.43-lb. Sire

No. 1. Born Feb. 1st, 1918. Dam has a record of nearly 22 lbs. of butter 7 days. Best days milk 75 lbs. Bull is extra good individual especially high rump, half and half in color. Price $175.00 delivered. No. 2. Born Feb. 16th, 1918. Dam has 20.20 lbs. at 4 years, second dam has over 25 lbs. 7 days. A little more white than black. Individually he's a dandy. Price $200 delivered. For further particulars and pedigree address

Holsteins Are Rugged

The Holstein-Friesian Cow is large, strong and vigorous, full of energy and abounding vitality. It is able to turn to best advantage the roughage of the farm, converting it into large quantities of excellent milk for all purposes. She perpetuates herself through strong, healthy calves, and when useless in the dairy fattens readily and makes excellent beef.

How About a Herd Sire?

MUTUAL FOBES LONGFIELD DEKOL 82959
A Splendid Son of His For Sale.

The Calf—M. M. Tritomia Fobes Longfield was born Feb. 2, 1918. He is nearly te, as straight as a line, and very well grown.

His Sire—Mutual Fobes Longfield DeKol already has 22 A. R. O. daughters and a ge number of younger ones coming on that will be retained in our herd. His sire ne of the good sons of Mooie Mutual DeKol and his dam, a daughter of Homestead DeKol, made 30.04 lbs. butter, 630.80 lbs. milk in 7 days as a jr. 3-yr.-old; 124.42 butter and 2,651.60 lbs. milk in 30 days. (World's record when made).

The Dam, Milford Tritomia Fobes Homestead, a daughter of Canary Fobes Bessie nestead, made 17.35 lbs. butter, 358.2 lbs. milk as a jr. 3-yr.-old; the second dam 8 lbs. butter, 408.3 lbs. milk; third dam 22.19 lbs. butter, 488.40 lbs. milk.

This is an excellent combination of breeding, the sire of this youngster and his t's sire both being from daughters of Homestead Jr. DeKol, both with records ve 30 lbs. butter and 600 lbs. milk.

The calf is priced within reach of any small breeder. Write us today for complete rmation about him.

Ormsby Jane King 2nd

Two Nearest Dams Average 35.64

Ready For Service

HERE IS AN OPPORTUNITY for some small breeder to get a sire of exceptionally rich breeding and splendid type at a very reasonable figure.

ORMSBY JANE KING 2nd was a year old June 24th. He carries a straight topline and is nicely marked.

HIS SIRE, ORMSBY JANE KING, is a son of the "Great White Heifer", Ormsby Jane Segis Aaggie, who has a record of 46.33 lbs. butter and 879 lbs. milk in 7 days.

AS A FOUR-YEAR-OLD she broke the world's records by producing 44.42 lbs. in 7 days and 183.16 lbs. in 30 days.

NO OTHER COW IN THE WORLD has ever made two records above 44 lbs.

ORMSBY JANE SEGIS AAGGIE has a three-quarter sister, Ormsby Jane Piebe, with 38 lbs. in 7 days.

ORMSBY JANE KING'S dam and two nearest dams of his sire average 37.16 lbs. butter in 7 days and 147 lbs. in 30 days. Nothing left to be desired on the sire's side of the pedigree, is there?

THE DAM OF ORMSBY Jane King 2nd is Moneta Pietje with a record of 24.95 lbs. butter in 7 days.

SHE IS A SISTER TO Agnes Pietje and Ilmata Pietje, both with seven-day records above 34 lbs. as three-year-olds. Another 3-year-old sister made over 31 lbs.

THE DAM IS SIRED BY Hillside Della Pender Pietje who has three daughters with records from 31 to 34.86 lbs. as three-year-olds and six three-year-olds averaging above 30 lbs.

THE NEXT SIRE IS Woodcrest Pietje with 60 A. R. O. daughters, over half of them having over 20 lbs.

SO YOU SEE both sides of the pedigree are full of great sires and producing dams and besides this Ormsby Jane King 2nd is one of the first grandsons of the "Great White Heifer".

WRITE US TODAY FOR pedigree and full particulars.

The E. C. Schroeder Farms, Box 576-H, Moorhead, Minn.

The Winship Farm Bulls

Are From Persistent Milking Dams

The 18 cows milking in my herd during April averaged 960 lbs. milk per day and 52 lbs. butterfat, each, for the month. This included heifers milking since last September, October and November. These dams represent the best blood lines of the Creamelle, Johanna, Beets, and Ormsby families.

Sired by Aaggie Burke Cornucopia De Kol

A 29-lb. bull, who traces back directly to the two greatest foundation cows of the breed, Spring Brook Burke and Aaggie Cornucopia Pauline. He is also closely related to the two champion 31,000-lb. milk cows.

If You Want Milky Bulls

Elliott Brothers Dispersion Sale

WATERLOO, IOWA, DECEMBER 6th, 1918

We Will Sell, Without Reserve, Our Entire Herd of 65 Registered A. R. O. Holsteins.
Six Cows With Records from 30 to 32 lbs. Butter in Seven Days.
A Dozen Sons and Daughters of Cows With Records from 30 to 35.24 Pounds.

KING PIETERTJE ORMSBY PIEBE, AT 16 MOS., THE WORLD RECORD SON OF QUEEN PIEBE MERCEDES, 1,389.45 LBS. BUTTER, 30,230 LBS. MILK, 365 DAYS AT 4 YRS.

He is the only bull whose two nearest dams average over 1,312 lbs. butter or 29,641 lbs. milk in 365 days. Sixteen of his daughters that for production, type and individuality cannot be surpassed. We believe that no breeder ever offered 16 daughters of one sire equal to these.

A 32-lb. cow and her two daughters, one with 31.6 lbs. at 7 yrs., the other 22.98 lbs. 7 days at 26 mos.

(1) Nearly half the offering consists of sons and daughters of, and cows in calf to, KING PIETERTJE ORMSBY PIEBE, THE GREATEST YEARLY RECORD SIRE IN THE WORLD. His dam and sire's dam average 1,312.39 lbs. butter and 29,641 lbs. milk 365 days. This makes him the highest record bull of any breed. Dams of these calves have records up to and over 31 lbs. butter A. R. O.

(2) 16 choice daughters of SIR GERBEN PAULINE, a 33.8-lb. bull. The first two daughters sired by him and the only ones that have yet freshened in mature form, have recently completed A. R. O. records of 34.8 lbs. and 30.54 lbs. butter 7 days at 5 yrs. of age. Several daughters in the sale that we consider still better.

(3) ORMSBY KORNDYKE LAD 7TH, the 3-yr.-old herd sire and a bull of remarkable breeding both for 7-day and 365-day records. His dam, 35.24 lbs. butter and 700 lbs. milk 7 days, is a sister to Woodcrest Dora DeKol. His sire, Ormsby Korndyke Lad, is making a reputation second to no bull in the East with daughters producing above 30 lbs. at 3 and 4 yrs. and making world records in the 365-day and 8 months after calving divisions.

(4) A breeder's sale as everything except the bull and four foundation cows were born on the farm.

(5) Tuberculin tested and sold with a 60-day guarantee. Catalogues ready Nov. 15th.

Catalogues ready Nov. 15th.

Less Weight in the Pistons
Less Wear on the Engine

Shock and vibration—these are two of the most destructive enemies your automobile engine has to withstand.

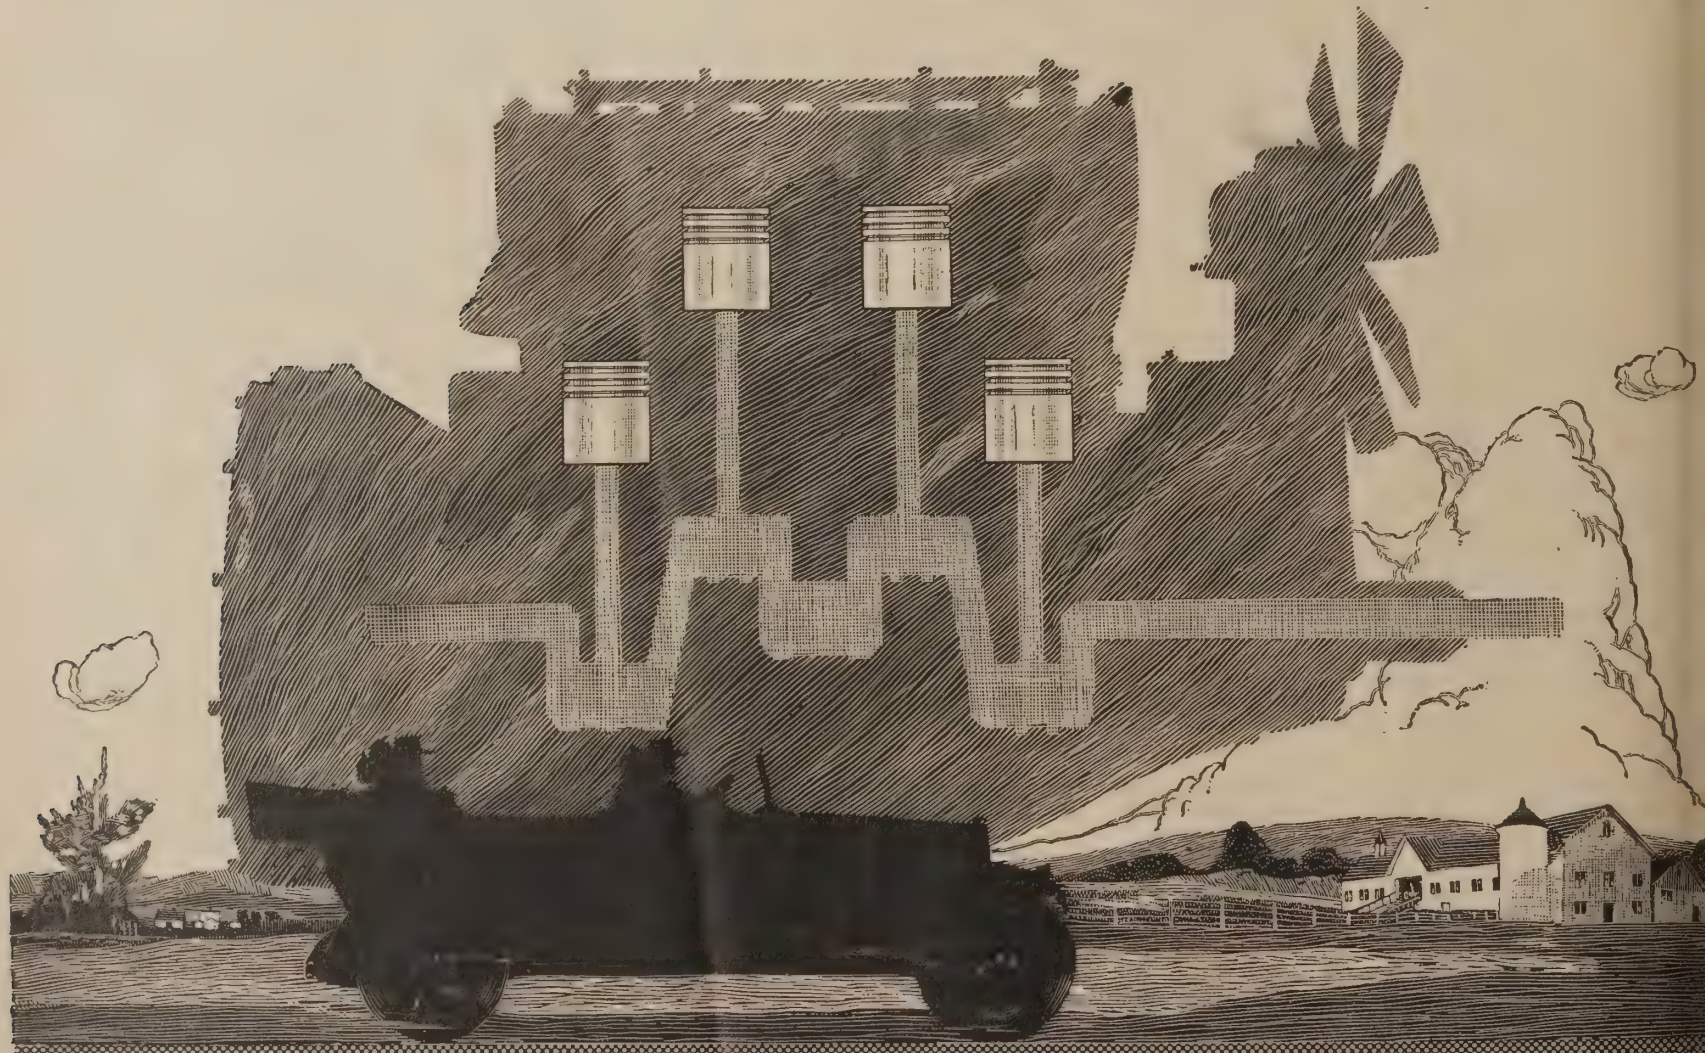
Overcome either of them, and you increase your engine's efficiency, lengthen its life and have fewer repair bills to pay.

That's one of the many reasons why *Lynite* Pistons have found such favor among motor-car owners.

For *Lynite* Pistons, by reducing piston-weight two-thirds, practically eliminate vibration from a well-designed engine.

The explanation is simple. Thousands of times a minute the pistons travel up and down in the cylinders. As they reach the end of each stroke, they have to be abruptly stopped and sent moving in the opposite direction. The sudden stopping of such a swiftly-traveling object cannot help producing a shock. Multiply these shocks by thousands every minute and you have the reason for vibration.

Constant vibration, besides interfering with the pleasure of your motoring, tends to throw shafts out of line and gears out of mesh; causes bearings to wear unevenly; shakes nuts and bolts loose and produces other more or less serious engine troubles.



With pistons three times as light as cast-iron, the rapid-fire shocks or blows are virtually freed of their hammering effect—vibration is almost entirely overcome.

If *Lynite* Pistons had no other advantage than this, their adoption by so many automobile builders would be fully justified, but the benefits of their use do not stop here.

Much quicker pickup, greatly reduced carbon deposits and other benefits must be added to get the sum total of *Lynite* Pistons' contribution to longer motor-car life and improved performance.

Send for booklet, "*Lynite* Pistons." It's free.

ishels in the preceding crop
So the outstanding question in
iry industry today is: "Where
bran?"

is generally understood that
in the Southwest caused a
reduction in feed crop yields and made pastures unsuitable for grazing; the comparatively low, or better, the artificially low price at which bran and shorts must sell has resulted in a great demand from buyers who never before used the mill offal; also, the heavy exportations of wheat in the raw form from the United States instead of shipping flour from this country—these have continued the most important influences in the acute scarcity of bran and shorts.

Copyright Underwood & Underwood

A SNAPSHOT OF A SAN JOAQUIN VALLEY, CALIFORNIA, DAIRY HERD

Wheat vs Flour Export

In the crop year 1917-18, the United States Food Administration followed a policy of exporting flour to the hungry allies of Europe, allowing only little wheat in the raw form to be shipped from the ports of this country. This, of course, was highly favorable to the milling industry and likewise to the dairy interests of the United States. Millers enjoyed an unlimited demand for flour, and, in comparison with the supply of wheat then in the country, dairy interests were able to obtain a large quantity of bran and shorts. Mr. Hoover, as soon as he was officially appointed to the position of United States Food Administrator, made the statement that a policy of exporting flour instead of wheat would be followed, this course being adopted to insure a plentiful supply of feed for the dairy herds of the country. The feed situation a year ago was not so critical as today, yet the opening of the present crop year witnessed a change of policy as regards exports of breadstuffs from American ports. Government food officials have been permitting an unlimited outgo of wheat in the raw form, and only a very small quantity of flour has moved from this country to Europe on the 1918 crop.

In August, 1918, when the movement of wheat from interior producing points was well under way, almost three times as much of the precious bread grain was shipped from the United States as in the preceding seven-month period of this year. The following tabulation of official figures on the clearances of breadstuffs for export from American ports shows the change in the outgo:

	Wheat, Bus.	Flour, Bbls.
August, 1918	15,119,873	972,470
August, 1917	5,169,649	1,014,649
8 months, 1918	21,169,948	17,469,290
8 months, 1917	88,800,050	7,876,428

The yield of bran and shorts from each bushel of wheat varies, of course, with the test weight of the wheat. However, it is safe to estimate the resultant production of bran and shorts from each bushel of wheat milled at 15.4 pounds. On this extraction basis, there was virtually lost to the live stock producers of the United States 232,846,064 pounds of mill feed in August, 1918, as compared with a loss of less than one-third this amount in the preceding year through exports. When the wheat is shipped in the raw form, the feed production resulting from milling in foreign plants is not returned to this country, as some possibly may believe, but is consumed by the herds of our Allies abroad.

Effect of Flour Market

Of course, when the wheat is milled in American plants and flour is exported to our warring allies in Europe, 68 pounds of feed for each barrel of flour become available for herds of this country. Also, by exporting flour instead of wheat from the United States, a greater outlet is found for the product of American mills, and more active operations of flour plants are witnessed. Now, however, with little flour leaving our ports, and domestic demand diminished by the use of 20 per cent of substitutes in the baking of bread, the market for flour is extremely dull. Many mills have been forced to suspend operations owing to their inability to sell flour. This, it can be seen, cuts a great hole into the available supply of feeds.

Another influence in the shortage of bran and shorts in this country, though only a minor one, is the fact that shipping authorities of the government are packing the great guns manufactured in the United States with bran. No doubt, stock men will marvel at this fact—feeding bran to our great munitions material!—nevertheless, it is true. And why? Heretofore, sawdust has been used in packing the great guns before being placed on ships, but with the shortage of shipping tonnage space, federal authorities discovered that a double purpose might be accomplished by substituting bran for sawdust. Not only does the bran serve the purpose of the sawdust as a packing material, but, after the guns are unpacked in France and England, this feed can be consumed by the live stock herds of those countries, whereas sawdust is a total waste. Peace will check such shipments.

Government Purchases of Bran

The Forage Division of the United

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome immoral and quack advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

The Boy and the Chance

A successful farmer once said that any man can make a go of it, if he receives enough encouragement at the time when it counts most—during early youth.

And I'm inclined to agree with that statement. I have seen it work out. Over on Hilton Road there is a prosperous dairy farm. The dairyman has three sons. From the very first, these boys were consumed with the idea of streaking it for town. They frankly admitted that the dairy business bored them.

Along came the war and took the two eldest. I heard last week that a message came in an official envelop about one of these lads. His father sort of grew very old in an hour and I haven't seen the mother in the village at all. However that may be, I do know that a great miracle has been suddenly performed on that dairy farm. The youngest of the boys has become another chap—there is a new light in his eyes and a new song in his heart. He was at Millar's Feed Store last evening and I scarcely knew him. His shoulders were back, his head high, and he looked as if he could step into his father's shoes at a moment's notice. Remember—he's just a youngster.

And then I found out. His father has changed from the old days. He had allowed the boy to have more that blood relation interest in the farm. His son had been given the sole responsibility and management of a sizable herd. He was keeping his own books and testing his own milk and cream and keeping his own private records of each month's showing. He even marketed the dairy products himself—and the profits were to be put in the bank in his name.

There isn't much mystery in keeping boys on the farm. Leastwise, that's the way I feel about it. My father, I remember, never thought I could assume such responsibilities. Perhaps it was because I was too near—too intimate with him—it never occurred to my father that I might have inherited some of his talents. And I never got a chance. As a consequence, the big farm did not interest me. I had the feeling that it was very, very far away. I was no factor in its growth or success. True, I worked there and slept there and attended to chores, but it was never impressed upon me that I was indispensable—that Dad couldn't get along without me. What I needed was to have someone who really cared—and that meant my father, of course—sit right down with me and pet me and talk business with me and make out as if he just had to have my personal collaboration—whether he meant it or not. As I think it all over, I am sure that I would have worked my hands to the bone for him, had he put it to me in that way.

But boys, nowadays—even very young boys—are surprisingly receptive to business influences. At eight, they have a great deal of horse sense. At twelve they know more than you can readily see on the surface. If there is one way better than another to bring out the best there is in a lad, it is to stand squarely back of him, believing in him, encouraging him—convincing him that he is a son after his father's heart. That's the material of which success is made.

Is there enough of this very companionship on a great many farms?

Is the other man's son always brighter than your own—at least, do you think of it in that way?

It interested me to talk with this boy from Hilton Road.

"I'm going to surprise some folks around here," said he, "wait a little while. You folks are feeding good butterfat to hogs. That's too expensive."

"Have you a cow?" I inquired.

"I have a whole lot of them," he answered proudly, "my father has gone into partnership with me—or, or rather, I should say,"—and he blushed—"I have gone into partnership with him. I have a herd of my own."

I did not smile—in fact, there was no smile in mind or heart. I could not laugh at this youngster, since I saw, unfolding, a very fine human drama. It was too great a thing to bring humor.

"I thought you wanted to go to town," I continued.

"No—I guess not," said the lad slowly, weighing his words. "Father needs me. And, besides, I like what I'm doing. In three months I'll be able to buy a cream separator of my own and next spring—then I'm going to clear ten acres of land that's full of stumps."

Every ounce of that boy radiated supreme happiness. Nor was there the slightest suggestion of doubt—of uncertainty—no lack of confidence in his own ability to put the thing over.

What wonderful creatures boys are!

And how necessary it is for us to mix loving them with studying them, to see how best to bring out all that is worthy, progressive, inspirational.

Every silo is a fortress that will make it harder for the enemy to win—especially if it's full of ammunition.

72-page catalog mailed upon request

Waste Nothing

This is no time for "cream slacker" separators or wasteful methods of skimming milk.

With butter-fat at present prices and the Food Administration begging every one to stop waste, "cream slacker" methods of skimming milk must go.

Whether you are trying to get along without any cream separator or using an inferior or partly worn-out machine, you are wasting butter-fat and losing money.

Get a De Laval and save ALL your cream

Viewed from every standpoint—clean skimming, ample capacity, ease of operation, freedom from repairs, durability—there is no other cream separator that can compare with the De Laval.

Order your De Laval now and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or, if you don't know him, write to the nearest De Laval office as below.

Principles in Breeding Pure-breds

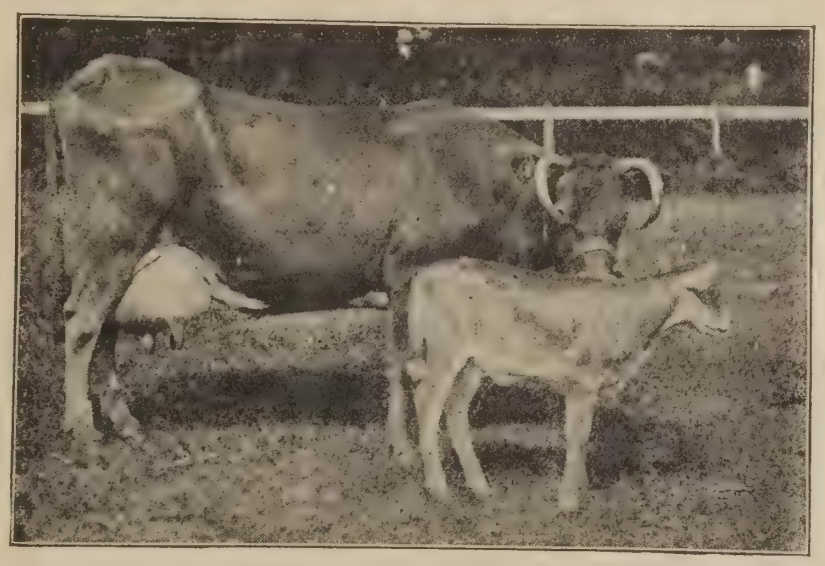
LOUIS McLANE MERRYMAN, MARYLAND

The first problem that faces the beginner in the breeding of pure-bred stock is that of founding his herd and the distribution of his money between the male and females. Of course, the best method is to buy the high priced bull and twenty of the best females. These should be all with records of over 500 pounds fat at two years; and good enough to be in the ribbons at the National. Such a herd can be purchased very readily for about $20,000. Next invest about twice this amount in a farm and suitable buildings and you have a nice start. Unfortunately, however, few beginners have so much money to invest in the business and so we must look around for some cheaper method of getting a start in the right direction. When it is possible to do what I have suggested, however, the man who does it is giving a tremendous impetus to the breeding of good stock. The farmers who do so are doing the country a very great service. And the cow who gives twenty really high class cows the opportunity of being mated with the best bull of the breed is doing incalculable good to that herd. Frequently he does not reap the benefit himself; but it is certain that many others will.

The beginner may also go to a sale and buy all the low-priced animals he may buy a bunch of cheap, immature animals. But, in any case, he should then wait until he gets the heifers and, in most cases, the granddaughters of these animals, before he has any really high class animals.

Still another method is to go to some reliable breeder and buy unregistered animals—a hip off or a quarter more gone. If he can get some of these bred to a proven sire this is by far the best method for one who does not thoroughly know pedigrees or individuals. Most breeders are only too glad to help beginners in this way and the buyer may thus get a topper out of the first crop of calves.

Selecting a Sire



When it comes to the selection of a sire I would advise the beginner to try to get a bull out of the best cow he can, so personally know the cow out of which the bull he is buying came, and under what conditions her record was made. For example, I am using a son of a cow without a record. But she is capable of a very large record, having eaten once only in the show ring, and lived to the age of eighteen.

I also believe that no bull is so bred that he is suitable to be bred to a whole herd of cows. I am using three bulls at present and am raising four more. They are all out of great cows and have some particularly striking characteristic that I wish to perpetuate. For example, again, I have a daughter of Johanna Chene that has a wonderful head and wither and is quality all over. I am saving her son to breed on some cows in the herd that are magnificent big cows with straight backs and good udders, but are decidedly thick over the withers and are short-necked. For the little cows with abundant quality I am saving a fine lusty son of Clare of Poplar Grove 3rd, who was fifth at the National as a fifteen-year-old cow. She made 13,170 pounds of milk and dropped two calves in the year as a 12-year-old cow. The second calf was a 100-pound heifer.

So much for the bull question; and now for the females. Let us return to the original plan of the best. Suppose the beginner knows dairy form or can secure the service of some one who does. There must be in his neighborhood a herd that was founded originally with the best cows and where the best bulls have always been used. Often this is a small herd maintained as a hobby, where no records have been kept, but where inferior animals have always been discarded.

FEBRUARY AND MARCH GUERNSEY CALVES ON GERAR STOCK FARM
OWNED BY LOUIS McL. MERRYMAN, MARYLAND

GUERNSEY COW, MARY JANE OF GERAR
She has a year's record of 494 lbs. fat in Class AA and 697 lbs. fat in Class A. This picture was taken at 14 years of age and with her twelfth calf.
OWNED BY LOUIS McL. MERRYMAN, MARYLAND

Some Personal Experiences in Buying

I know a Jersey herd fifty years old from which heifers can be bought for $100 each. I saw Guernsey heifers bought within the year, from what I consider to be the greatest herd in America, for a like figure. Again, I recently saw some splendid Holsteins by an own brother to one of the most prominent bulls of the breed that had been bought "right". To give a personal example of this sort of buying: When I took our herd in 1913 we had six animals whose value we were just beginning to realize. My grandfather had purchased two heifers and a bull in 1889. My father bought all the subsequent bulls for him. He always tried to get the best. The results of this sort of effort through twenty-four years were just beginning to show. Mr. M. T. Phillips purchased Gerar Pearl from us for $125. He has already sold over $6,000 worth of calves from her and still has two daughters and two granddaughters of this fine cow in his possession. And Fruit Brothers recently refused $8,000 for her second son.

In the neighborhood were several cows of our breeding. I purchased a daughter of one of these cows for $80 as a calf, and subsequently sold her for $2,200. Her sixteen-month-old daughter won the cup as highest priced Guernsey heifer at the Lake Forest sale. At the same time I purchased the Clare of Poplar Grove 3rd family, giving $30 for a heifer out of the old cow. This heifer I called Clare of Gerar. She made 25,000 pounds of milk before she was five years old and dropped three calves—a bull and two heifers. The elder promises 12,500 lbs. of milk at two years and won her class at the recent Maryland State Fair. The pair took first as produce of dam. I can think of many other cases where the result of careful breeding has been realized by others in the game.

I advise every beginner to see if he can realize on the work and thought of others by acquiring animals of really high class that can be bought right, because, as I have before stated, they have not been developed to the highest point. Murne Cowan, the present Guernsey champion, and Jacoba Irene, a former Jersey titleholder, are examples. Neither had immediate ancestors with A. R. records, but both traced to notable animals of the breed. It is evident that their immediate ancestors were inconspicuous rather through lack of opportunity than lack of merit. In fact, Gray's Elegy applies equally as well to the bovine as to the human race: "Full many a flower is born to blush unseen, and waste its sweetness on the desert air."

Having gotten together the best animals one can afford, it must be realized that success depends as much on their care and the raising of their offspring as in the original selection. And, furthermore, having undertaken the guardianship of high class animals which are the result of years of careful thought and judicious expenditure of money, it is the duty of the breeder to see that his herd does not revert to the original cow that produced only enough milk to feed her own calf during six months. Every breeder who, through his criminal neglect or short-sighted niggardliness, allows his animals to go back so that they fail economically to produce the greatest possible quantity of the most valuable of all human foods is giving as much help to the Germans as if he were destroying munition factories.

Handling the Calves

Here at Gerar we have worked out, in a somewhat haphazard way, a system of bringing our animals to maturity. At first the calves were raised in the main barn. This was built originally as a horse barn and was of the large, bank, Pennsylvania type. It worked quite well for a while, but presently increased numbers of stock brought various troubles and then the old barn became a hot-bed of infection. Later, we built a calf barn with accommodations for about thirty calves and six maternity stalls. This has

(Continued on page 596)

GUERNSEYS ON GERAR STOCK FARM, MARYLAND
At the left is Miss Rosedale and her two daughters, Gerar Rosedale and Gerar Rosie. Miss Rosedale, not yet six years old, has dropped five calves. She has an A. R. record of 11,856.8 lbs. milk, 2 lbs. fat which gives her third place in class BB. The two heifers were dropped within ten months of each other and while she was making this record. The eldest daughter of Miss Rose- has a record of 466 lbs. fat begun at 23 months; the youngest two were third as produce of dam at the Maryland State Fair.
At the right is Clare of Gerar, first A. R. cow in class DD, with a record of 13,782.9 lbs. milk, 637.8 lbs. fat. She dropped three calves and made 25,000 lbs. milk containing 1,150 lbs. fat e she was five years old. Her eldest and youngest calves were first as produce of dam at the Maryland Fair and her eldest daughter won in her class and promises 12,500 lbs. milk at two years.

New York Institute Workers Meet

H. H. LYON, NEW YORK

THE annual meeting of New York farm institute workers was held at the state college at Ithaca a few weeks ago and was well attended. During the conference Mr. Robertson discussed questions of marketing. There are various methods of quoting or determining prices,

Market Quotations

but these are rather slow and prices are far from uniform. On the same day prices on cabbages or potatoes may have great variations in different communities. What method can be adopted that will make prices more uniform? Buyers get produce as cheaply as they can. There is sometimes a wide difference in prices in two adjoining towns. The Department of Foods and Markets is willing to include local quotations in its weekly reports. Possibly ten men in a county can, in conjunction with the county agent, secure prices. It is being tried in some way in a few counties. Some method of co-operation might be worked out in which local farmers, possibly dealers, the county agent, the State Foods and Markets, and the National Department of Agriculture may be able to get a more definite knowledge of prices and may inaugurate a better method of distribution of quotations.

Mr. Freman of Ithaca, who is the up-state food administrator of New York, gave some information as to his work. He is one of the best informed food administrators in the country we are told, especially in respect to the farmers' side. He mentioned the market milk situation, and intimated that this has been the worst bungle of the past year. He predicts that something more favorable is likely to be in evidence within a month. He requests dairymen to keep their criticism for the present. He thinks that the League on the one side and the Administration on the other will arrive at something reasonable. Mr. Fre-

Food Administration Talks

man regards the work of the state administrator as accompanied with difficulties. He did not intimate any method of adjusting the milk questions, and there still remains an unsatisfactory outlook. It is best for us to leave the questions to the League for the present. I cannot say that we should express no opinions, for the sentiment of producers ought to be understood.

Professor Babcock spoke on community organization. He called attention to the tendency, especially of older folks, to look back

Farm Bureaus Grow

and say they wish crops and conditions were as when they were young. Mr. Babcock says he got hold of a report of 1849 which contained a statement by a speaker who deplored the then recent changes and expressed the wish that they might get back to the good old days when he was young. In working on community problems, it is best for the county agent to keep in touch with his community members. Many places will ask if they have received adequate benefit from the county bureau. The war will close some time, perhaps soon, and the incentive for liberal spending will be curtailed. There is to be retrenchment, and there is danger that there will be loss of confidence in bureaus. There were 23,000 members of bureaus in the state last year. There are 43,000 this year, and close to sixty thousand are expected for 1919.

Regarding milking machines, the question of keeping down bacterial counts was discussed. Many are keeping their machines in

Milking Machines

good shape with cold water and some sterilizing solution. It seems better to use hot water occasionally and at Genesee it is used twice a week. Cold running water is good. Salt water is all right, but there is a salt bacterium which does not affect milk but which makes counts. Chloride of lime better be added to the salt water. Institute men are likely to recommend milkers this winter, although somewhat guardedly. Their success depends largely upon the operator. The kind of machine is not to be advised, for practically all the machines are successful. It is a question for the individual, but all those who took part in the discussion seemed favorable to them. One man finds that it is profitable for him with only fourteen cows.

Tractors in New York are much more in favor than I had supposed. Some men with steep hillsides and stony land are making a success with tractors. The number of days in spring when oats, for example, may be sown is not very large. A tractor may be profitable because of this and similar reasons. The smaller machines seemed to be preferred on rough land.

The power ditcher, as is to be expected, is more satisfactory on level land free from stones. I was not able to determine that ditchers are at present to be recommended on really stony land. There is considerable discussion on ditchers and the state is doing something with them. I am not sure how many the state owns. They have been ditching for fifty cents a rod if not over three feet deep, but have hardly come out even on that. Next year the cost will be sixty cents for two and one-half feet.

Seed corn in New York is to be short again. There are sections where silage seed may be had for a time,

Seed Corn and Varieties

and there is some flint seed in a few counties. The hardy and early dents are small and do not seem to be advisable in the place of flints. There may be a few sections where some dent corn can be used to advantage, but flint is the standby for the usual conditions of the state. Lucie's Favorite and its relatives are to be recommended for silage. Farmers still claim that they can get more milk per acre of corn by using Eureka or some of its kind, even if the college authorities say there is less value in it. It is to be tried out by the animal husbandry department. Succulence is an important element. For all that, there is only about one-fourth as large a proportion of the large, immature corn grown in New York as was grown five years ago. This was assented to by practically all.

Fertilizers are needed for New York State. Potash has been off the market for some time, but is slowly coming back by the

Fertilizer Needed

new manufacture that is going on. We have evidence that potash will be in supply up to nearly one-fourth that of former years. At the same time it is found that acid phosphate on most New York soils furnished as much value as when used in connection with potash. It seems unnecessary to buy much potash for New York. It is much more difficult to get nitrate, and this substance is to be practically off the market this year. Stable manure and clover are to be the reliance for nitrogen for the present. Lime is needed. There seems to be some disposition to hold back lime either because of shipping or of coal for burning or grinding. There are those in authority who do not understand the usefulness of lime. We come up against agricultural ignorance at every corner.

Even now it is required of a farmer that he will sign an agreement not to use over a ton of lime to the acre, and this seems to apply whether it be burned lime or ground. There is

CERTIFIED MILK DAIRY WHERE BOTTLES ARE FILLED AND CAPPED BY MACHINERY

good deal of formality connected w this and it may be that the use lime will be cut in half unless so thing can be done to relieve the sit tion. What we need is lime and a phosphate. Nitrate, we need also, cannot get much until the war is o With the labor shortage, nitr shortage is felt more seriously, we will have to stand both for present. Lime shortage, it would se ought not to be inflicted if avoidab and it should be avoidable so far we can see. Some agricultural visor to the administration has sta that lime is not needed. This man are told comes out of the national partment of agriculture.

Dr. Warren attacked a stack of s tistics and with his accustomed vi and discernment interpreted them

(ne Man's Benefit to His Community

F. G. SWOBODA, Wisconsin

T E striking value of one farmer in community owning a high class u -bred sire is well proven on W hington Island, Door County, W For several years Chris. Han- o a prosperous Danish farmer who a lived on the island for four dec- d, has kept a pure-bred Holstein ir For the past seven years Han- o sires have been practically the n pure-breds on the island. At the ta , as was to be expected, farmers re a bit slow about availing them- el s of the use of these sires, even t e very reasonable service fee of n dollar.

t so slow, now, however. In 9 two hundred forty-eight of the v hundred cows on the island were r to Hanson's bull. "They were r ght from every corner of the is- n" he declared in telling of it and, i entally, it should be stated that o many farmers this meant a trip f ur or five miles. Interest is be- g kept up, for during the first six m hs of 1918 one hundred forty- g cows were brought.

ere probably isn't another com- u ty in Wisconsin of territory q l to Washington Island where i a large percentage of the im- r ement is attributable to sires w d by one man. Travel where you il on the island, from north to u , from east to west, and there is a ely a single herd that hasn't one ore grades, offspring from one nother of Hanson's bulls. The young stuff in particular is show- p very strong.

. Hanson's sire as an individual very superior animal. Straight line, deep bodied, with good h and in the pink of condition, te his heavy service. Then, too, backed by good breeding. On ire's side both Canary Paul and Fobes Bessie Homestead appear e pedigree.

hen I went out to buy a sire," Mr. Hanson, "I decided first of at he had to be a good individu- Because of the fact that the of Mr. Hanson's pure-bred sire ience should prove an inspira- to the beginner or to the man for various reasons has contin- o put off being a beginner, we the following: "Mr. Hanson," we , "how did you happen to get d using a pure-bred sire?" "I'll ou," he answered. "It was like I had been reading in the farm 's a good deal about live stock. see I always take three or four papers and read a good deal. , before I came to this country, in Denmark, we had good stock. d good cattle so I made up my to get started by buying a pure- bull. The first one I got when as only a calf cost me $75, and eight, which made the total $80. This animal was sold to the butcher for $117 after I could no longer use him."

The sire bought to replace him cost $125 at one year, a freight charge of $15 bringing the cost up to $140. Because he did not develop quite as well as was anticipated and some of the offspring fell short of expectations, he was disposed of at a little past three, the butcher paying $85 for him. Mr. Hanson's first two sires cost him in cash, delivered on the island, $223. They brought him for beef, $202.

The first one produced right up around 200 calves, bringing his owner an equal number of dollars as service fees. The second one, though used a shorter period, produced three hundred calves. Holstein popularity had grown with the years. Farmers saw that the grade calves were so superior to the offspring of the scrub bulls of which there was a host that they began to come in increasing numbers. At the age of three and a half years Mr. Hanson's third sire had up to July 1, 1918, bred four hundred and fifty cows. His first year of service the number was forty; the second year, 225; and the first six months of the third year, 147. Mr. Hanson keeps an accurate book record of every cow brought to his farm so that the accuracy of the above figures cannot be questioned.

Chris. Hanson, who has so largely benefitted his community couraging the use of pure-bred sires, and the bull he is now At three and a half years of age this bull, according to anson's records, had bred four hundred and fifty cows.

That the heavy service has had few bad effects can readily be seen by the splendid appearance, bloom, and activity of the bull, also by the fact that he is a sure breeder. Mr. Hanson lays this to the fact that he used the sire comparatively lightly as a yearling. What is more, the bull is a good feeder. At the height of the breeding season he eats as high as a half a bushel of oats a day. As roughage he gets alfalfa hay with clover and in the summer fresh cut green grass. When in light service in winter 10 to 15 lbs. of silage per day are given.

"What do you figure it costs you to keep a bull a year?" we asked him. "I cannot do this for a cent less than $200 a year," he replied. "The feed alone costs me at present prices over $100. Then there is the work of feeding him, cleaning him, and taking him out." Mr. Hanson considers currying a matter of big importance. His bull is kept tied in a stall.

When we asked what he considered the big factor in building up a good herd of live stock Mr. Hanson replied, "Good breeding, good feeding, and good care. Those are the three things. A reason why a lot of our stock isn't better is because it isn't fed well enough."

Prominent mention was made a few months ago of a movement which has been put on foot to make Washington Island a Holstein island. This movement was started by County Emergency Food Agent, Moulton B. Goff, and D. S. Bullock, representing the Wisconsin Live Stock Breeders' Association in co-operation with the farmers of the island. Mr. Hanson was elected president of the Washington Island Live Stock Breeders' Association, and most fittingly, too, for if credit for putting the live stock industry of the island on a higher plane is to belong to any single individual, that man is Chris. Hanson.

At the present time there are four pure-bred Holstein sires on the island. The assessor's report shows that the one hundred ten farmers there own 508 cows. Up to this summer there was always a promiscuous lot of young scrub bulls, many of them running at large on the highways and commons. A recent trip on practically every road of the island failed to reveal a single one of these nuisances.

A prosperous, well run creamery is manufacturing a high class butter from the cream brought in by the farmers. As yet, but comparatively few in number, silos are increasing. Farmers are beginning to realize more and more that if they want to keep up their crop yields they will have to keep more stock. The high price of feeds is convincing them that they can't afford to keep just common stock. The liberal milk checks received by the good feeder is tending to convince the poor feeder that if he wants results he, too, must feed better.

Lack of size is a conspicuous fault noted in much of the stock, even in the grade Holsteins. This results largely in improperly raised calves. Several farmers have the right idea and the influence of their example should spread. On one of the farms we saw four as well raised winter calves as anyone could wish to own. They were being kept in a clean, comfortable building and fed skimmilk twice a day and a grain ration consisting of ground oats, barley, and bran twice a day. "I like to see nice stock," declared the woman of the family as she affectionately fondled one of the calves. "It gives me pleasure to watch them grow." Young calves are not turned out in pasture on this farm as is the common practice on the island.

While somewhat isolated and out of the common routes of travel, Washington Island offers splendid opportunity for developing into a strong Holstein center. Leading farmers on the island are optimistic and hope that with proper encouragement a bright future for their live stock industry will develop.

Storing Manure in Holland

HOARD'S DAIRYMAN:—It is common knowledge that in the little thrifty countries, as Denmark, Holland, and Switzerland, much more attention is paid to the little things on the farm than is here the case. In this topic I hope to explain, for instance, something about the conservation of manure as we see it done there.

The visitor who has been in these little countries in springtime may have observed, not far from the back door, a big manure pile nicely fixed up. Round the manure pile a small dike of hard clay is thrown up to prevent the manure from scattering all over the place in rainy times, and to make a certain pressure in the heap. Close to the manure pile is a pit into which all the sewage and the liquid part of the manure flows. This pit is pumped empty from time to time and the contents spread over the manure pile. I need not tell of what big importance this is for making the finest and most valuable manure produced, because the hard and the liquid parts make just such a fine combination. All over the length of the manure pile poles with planks are placed, so that the manure can easily be spread over the whole manure pit. All the manure of hogs, cows, and horses, together with straw and other waste materials, are thrown in this pit. This is another important thing, as it is the mixture of different manures that helps supply all the necessary elements needed by the plant. Around the manure pile we often see high trees, poplars or elder bushes as not every kind of tree will grow around it. The purpose of these trees is to prevent the hot sunshine from drying out the heap and evaporating a good deal of the ammonia or nitrogen.

If the manure pile is not spread in springtime, but in fall time, the manure pile is covered with a thin layer of clay on which cabbages are planted. This has two advantages, first the cabbages give a fine crop and secondly the manure pile is all shaded over by them.

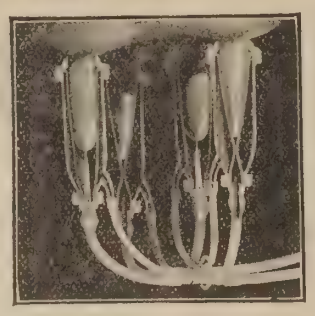
All the manure is brought by an overhead carrier and dumped into the manure pit and shed at the left, where smaller carriers inside are used to spread it evenly over the concrete floor. To avoid loss of nitrogen the baled peat shown in the shed to the right is mixed with the manure.

Warning from Washington Shows why you Need the Universal natural milker

Alternates, Like Milking With Hands

EUROPE is begging for our dairy products. Our home demand far exceeds the supply. The situation calls forth warnings from officials at Washington, urging farmers and dairymen to increase their supply.



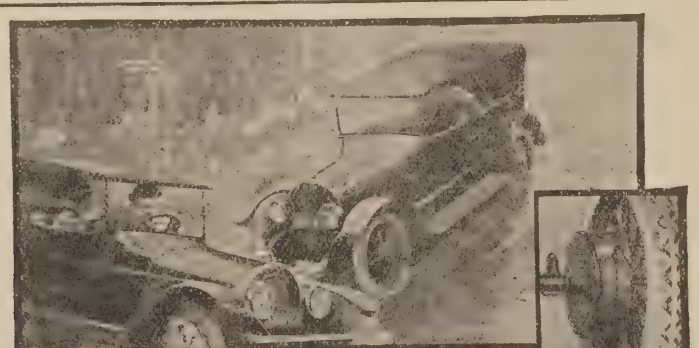
This condition will far outlast the war. Labor is the big problem. Others are solving this difficulty by using the perfected ***Universal Milker*** instead of the old hand-milking method which takes too much time and energy.

The Universal makes it possible for the dairyman and farmer to enlarge his business, and to get greater profits from his dairy products. For both, the Universal opens a limitless field of income.

The exclusive advantages of the Universal place it unquestionably in the lead. Where there have been comparative experiences, dairymen and farmers decidedly favor the Universal.

The Universal alternates, like milking with hands. While two teats are being milked, two other teats are being massaged, thus the action is stimulating, comforting and relaxing.

The cows benefit from the use of the Universal, and frequently give more milk.



"The machine runs fine, and my wife (a girl of 19) did all the milking while I was away—she milked 12 cows and rinsed the machine in 37 minutes."

How moisture affects ordinary brake lining

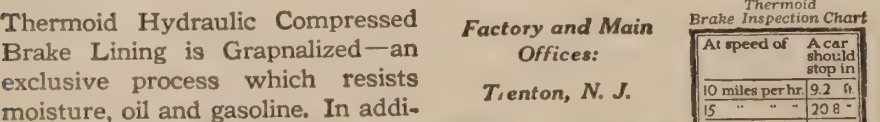
Do your brakes take hold too quickly after the car has been out all day in a driving rain? If they do it is because the dampness has worked in, causing the brake lining to swell. Brakes that are swollen from moisture are never dependable. Today after a rain-storm they "grab" and take hold too quickly. Tomorrow, after they have dried out, they act more slowly. Brakes that swell from moisture wear out quickly.

Why Thermoid resists moisture

Thermoid Hydraulic Compressed Brake Lining is Grapnalized—an exclusive process which resists moisture, oil and gasoline. In addition to being Grapnalized, Thermoid is Hydraulic Compressed. This makes it uniformly hard.

Over 40% more material and 60% more labor are used in the manufacture of Thermoid than in any woven brake lining.

Support the Brake Inspection Movement and have your brakes inspected today.



Every foot of Thermoid is backed by *Our Guarantee: Thermoid will make good—or WE WILL.*

Association Notes

Middlesex—Somerset, New Jersey:—A year's record of the herd of S. S. Hastings, completed this month, shows his two best cows to be a grade Holstein with a record of 9,810.6 lbs. milk, 349 lbs. fat in 9 months, and a grade Jersey fresh Oct. 29, 1917, with a record of 8,549 lbs. milk, 389.9 lbs. fat in 11 months. She is still milking 675 lbs. per month and is not due to freshen until next May, having failed to breed as expected. In October, market milk sold for $3.57 per hundred. The average test required was 3% and for each point above 4c were paid. Milk retailed for 14 to 18 cents per quart; butter, 70 cents per pound. Feed prices: Alfalfa hay, $30 to $35 per ton; timothy, $27 to $30; clover, $20 to $25; corn silage, $10; cottonseed meal, $70; oil meal, $66; bran, $50; Larro, $64; Big Q, $66; oats, $.70 per bu.; corn, $1.50 to $1.85.

Arkansas Valley, Kansas:—Several of the members have co-operated in buying two carloads of oil meal, hominy, and gluten. One member has disposed of all his grades and will start with pure-breds. In October market milk sold for $3.35 per hundred, or 30 cents a gallon, the average test required being 3.5%. The condensery paid $3.35 per cwt. for milk testing 3.5% and 3 cents differential. The creamery paid 65c per pound fat. Milk retailed for 12½ to 15c per quart and butter 62c per pound. Feed prices are: Silage, $8 per ton; alfalfa, $20 to $25; bran, $28; corn chop, $68; oil meal, $72; hominy, $70; gluten, $66; pasture, $1.50 per head per month. Bran is hard to get. Wheat pastures are good.

Stillaquamish, Washington:—Feed situation is acute for concentrates. The condensery paid 78 cents per pound fat and the creamery paid 60 cents. Milk retails for 13 cents per quart, butter 58 cents per pound, and cheese 30 cents.

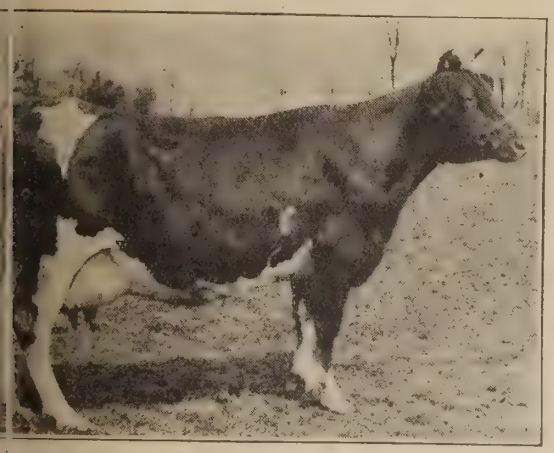
Pioneer, Minnesota:—The creamery paid 66 cents per pound fat and milk retailed at 11 cents per quart. Pasture cost $1 to $2; hay, $8 to $15; bran, $29 to $34; oats, $35 to $40; oil meal, $59 to $64.

Libertyville, Illinois:—A number of grades have been sold, but pure-breds have been purchased in their stead. Two pure-bred bulls have also been purchased during the month. In October market milk sold for $3.32 per hundred. The average test required was 3.5% and for each point above 4 cents were paid. The creamery paid 57 cents per pound fat. Silage cost $8 per ton; alfalfa hay, $30; timothy and clover mixed, $28; oats, $45; barley, $40; oil meal, $60; cottonseed meal, $61.

Advertising Benefit to Consumers

HOARD'S DAIRYMAN:—In these days of war food economies, it is strange indeed that milk and its products, with their exceptional high nutritive values, do not command a demand which makes possible frequent and even sharp advances in prices in order to insure generous returns to dairymen. When a rise in milk pr is proposed in large cities, ther immediately opposition and talk o duced consumption. Yet milk is where selling at other than bar prices in comparison with other articles. Besides, even sharp adva which, it seems, the present f stuffs situation may necessitate, w still leave milk and its products cheap basis as compared with c food articles.

Of course, this unwarranted dition in food markets has been quently diagnosed. The most re finding, and the one which seem offer the greatest opportunity remedial measures, is that there lack of proper advertising, or b a total absence of advertising, o products of the dairy industry a America's millions of consumers



No industries with the capita vestment of dairymen spend so on advertising as the produce milk and its products. Thus, the c er and even the bread bakers s millions in the aggregate to en age the consumption of these st Even the dispensers of distilled d ing water spend more money tha sellers of milk to advertise for sumers. The makers of oleomarg advertise more than the dair terests. Even the peanut butter dists are outdoing the manufact of creamery butter, compara speaking, in advertising.

No doubt, the high food val butter, milk, and other produc the cow have led the dairy int into the idea that "quality wil the market". This is true to son tent, and to the extent of the p volume of sales of dairy pro But for the industry to furthe vance, more than quality is dem to open wider the available ma There are many industries in A to-day whose products have atta high degree of quality, yet thi is only a talking point for inc advertising. Such should be the of dairymen.

At the present time, dairyme argue that they have a greater n for their products than they ca ply. This possibly is true of the west, where drouth has great duced the flow of milk. But the n is not as broad as it should be, does not adequately compensate men. If one will glance throu advertising columns of any p tion, it will be noted that amo largest advertisers are those tries which cannot possibly domestic orders, owing to gover contracts which are taxing t most capacity of the plants. M these industries cannot hope t their products on the Am market for an entire year. It i the idea in mind of maintainin former broad market that the tinue their advertising. When conditions again prevail—th when warring nations will ha down ther arms—these great tries will turn back to their established trade. But, withou name continually before the through the mediums of adve

h great industries would soon dis-
:r that their name was entirely
otten in the minds of their form-
rade. Dairymen have more than
h to gain from advertising.

ne of the important factors which
s indering the development of the
y industry, besides the lack of ad-
ising, of course, is the publicity
n by newspapers to the amount
acteria in the milk as offered by
y interests. Occasionally, for
ical or other reasons, newspapers
t reports showing the bacteria
t in milk. In Kansas City, a news-
r recently published the bacteria
rts in order to "hit at" the city
inspection department but
was a terrible "jolt"—hitting

h are inferior to the food offered
airymen.

he beneficial results of advertising
products would be particularly great if carried on during the present food situation in the United States. Besides educating the public, the housewives particularly, of the high food value and comparative cheapness of milk, butter, cheese, ice cream, and other dairy products, considerable space might be devoted to the fact that the dairy products can be substituted for beef and pork to good advantage, thus leaving a more plentiful supply of these expensive foods for the soldiers of the armies of the allies and the United States. It is a common statement that Americans are eating too much meat. This is only one of the thousands of statements upon which dairy advertising might be based.

The time is ripe for dairymen to begin advertising. They should aim in their advertising to bring to general attention the fact that their food products are the most highly praised of any in the world by physicians, physiologists, and dietary experts. They should so stimulate the demand for milk and its products as to make possible liberal advances in prices without affecting consumption. The expense of this advertising should rightfully be a charge against production, just as the purchase price of alfalfa and bran in the herd's ration is a part of the cost. Whatever the expense of this advertising, it will be a profitable investment for America's customers, who, it is plain, ought to be using more milk, butter, and cheese. The benefits to dairymen would perhaps not be so great as to consumers, but the producers of milk, butter, and cheese would through such advertising not only create a stronger and more profitable demand for their products, but would pave the way for further extension of the dairy industry.

Dairy Show at Winnipeg

A Canadian Dairy Show will be held at Winnipeg, Manitoba, February 17th to 21st, 1919, in conjunction with the annual convention of the Manitoba Dairy Association. Prominent manufacturers of dairy equipment and farm dairy supplies in Eastern Canada and the United States have stated their intention to place exhibits and all will doubtless welcome this, the first opportunity to display their goods to the representatives of dairying in all its branches in Western Canada. It is to be really the greatest demonstration of its kind ever held in Canada.

A splendid auditorium, comprising seven thousand square feet of space available for exhibits, has been secured for the Dairy Show, while sessions of the convention will be held in the beautiful Fort Garry Hotel near by. Strong committees have the whole affair in charge and their plans ensure exhibitors and visitors their money's worth and a genuine western welcome in addition.

Blue prints of the Dairy Show auditorium are available and will be furnished with all additional particulars upon application to Mr. L. A. Gibson, Secy. Manitoba Dairy Association, Government Buildings, Winnipeg.

The Philippine Islands are steadily gaining in the production of raw sugar. From crops of 345,077 short tons in 1913, and of 408,339 tons in 1914, the crop of 1917 advanced to 425,266 tons.

The Pioneer American Separator

and the

Most Efficient

P. M. Sharples, President of the Sharples Separator Company, invented the first American Cream Separator. For over a third of a century, he has been manufacturing and improving this remarkable saver of butterfat.

Tests show that all separators are turned at the wrong speed some of the time; some separators are turned at the wrong speed most of the time—but the Sharples Suction-feed Separator skims clean at *any* speed *all* of the time.

The Sharples provides a method of positive conservation of millions of pounds of butterfat at a time when such food is so valuable.

The Sharples factories are the most extensive of their kind—and the Sharples institution is the largest American-owned separator and milker business in the United States.

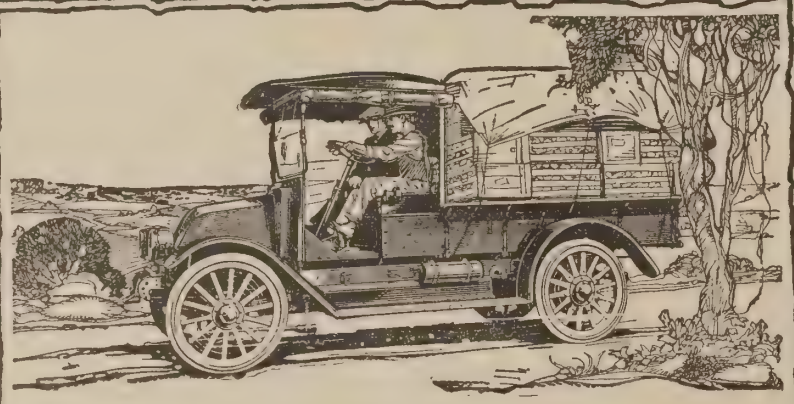
Babcock Milk Tester Complete $12.00

Any Cow Owner Can Make Accurate Milk Tests With the Efficient and Simple Crepaco Babcock Milk Tester

There is nothing intricate about it—operated by hand. There is a size for every dairy, from the 2 bottle tester to the large size with 24 bottle capacity.



This tester is noiseless in operation, the high speed being attained without unnecessary friction, by means of a spur and worm gear with cut teeth. The full instructions which are supplied with each machine tell you how to make accurate milk tests.

Crepaco Babcock Tester complete with glassware as illustrated above—six bottle capacity costs only $12.00.

We have Babcock Testers as small as the 2 bottle size costing $4.25 complete with glassware.

Our big Dairy Catalog describes fully, all size Milk Testers and other appliances of value to the dairyman. Write for it TODAY.

International Motor Trucks on the Farm

THE motor truck, just coming into general use on the farm, is fast proving itself a most valuable farm machine. Farm hauling with horses takes a lot of time, keeps the driver from doing much needed farm work, and costs altogether too much in money as compared with the speedier, economical truck.

Mr. L. C. Henry of Utica, Minn., purchased an International Motor Truck to haul his live stock and farm produce to market and to bring return loads from town. He says, "We use the truck for nearly every kind of hauling. It saves more time than any other machine in our farm service." Five of Mr. Henry's neighbors bought International Motor Trucks when they learned, from his experience, what a useful economical farm machine he had.

An International Motor Truck can be used both on the farm and on the road. It is a safe machine to buy, for over 15,000 are now in service. We have a dealer, a branch house or a service station somewhere near you. Write us for prices and complete information about all seven models.

International Harvester Company of America
(Incorporated)
CHICAGO U S A

Conservation Program for Farms

From a harvest less in aggregate production than last year, the United States must export at least 17½ million tons of foodstuffs overseas during the coming season. This is about 12 million tons more than average prewar exports, or nearly two tons apiece for the average American farm where most of this food originates.

Rigid conservation of food and feed stored in granaries, cribs, barns, and similar buildings—also products now in the fields—are essential to properly maintain our own population and to meet increased foreign needs. Animal feeds, though in a crude form, must be considered as food, since they are the basis for meat, milk, and poultry products.

The vast quantity of foodstuffs stored on farms makes opportunities for saving them correspondingly large. Following are common sources of food losses with suggestions for reducing them.

Fire—Remove inflammable rubbish, plow fireguards, use care with matches, lanterns, and stoves. Supplement these safety measures with fire fighting equipment kept in a definite place for instant use. In brief, consider a farm as a food munition establishment.

Shelter—Prevent spoilage and deterioration by putting all foodstuffs possible under adequate shelter. Full utilization of storage space and prompt repair of roofs help greatly in preventing food losses. By sheltering foodstuffs on farms conservation is effected at the source.

Rats and pests—Regard rats and similar pests seriously, as the direct enemy of starving humanity. Exclude them with concrete floors and destroy their breeding places. Rats must not eat holes in our bulwarks of national defense.

Stock losses—More than a million tons of our food exports must comprise meats, fats, dairy products, and poultry products. The quantity of this class of food depends largely on comfortable housing and the care which animals receive. Needless exposure and irregular attention may result in reduced production and mortality. Thorough farm conservation demands that live stock be kept comfortable and in healthy condition, thereby securing maximum results from the feed consumed.

In complying with these suggestions, and extending them to cover additional sources of loss, farmers are asked to consider this program necessary until next harvest, even should peace come before that time. Besides feeding ourselves, the United States is pledged to feed the Allies and we must also supply the people in territory now being recovered from German dominion. We must realize that peace will bring no additional food but instead increased obligations. Poland, the Balkans, and other parts of Europe now isolated from relief will clamor for a share of our present and future reserves.

Thus strict conservation in all foods and feeds stored on farms is imperative in addition to the food program for homes and public eating places. Compliance with these requests will enable the United States to fulfill present obligations and be ready for new responsibilities.—U. S. FOOD ADMINISTRATION.

The soy bean does not require a well-drained soil for its best development, although it will not succeed where water stands for any considerable length of time. Swamp and peat soils, after being drained and limed, have usually been found to produce this crop very well. Soy beans will thrive on soils that are too acid for the successful culture of red clover.

Fight with Concrete

¶ The way is open

The War Industries Board recognizes farm buildings as necessary to increased food production. No permit is needed for a farm improvement not exceeding $1,000 in cost.

¶ Concrete is the way

Bull's-eye hits against fire, rot, disease, rats, cyclones, expensive upkeep and insurance, are fired by such concrete weapons as *feeding floors* and *barnyard pavements, milkhouses, hog houses, manure pits granaries, fruit and vegetable storage cellars and dipping vats*

¶ You build once only with Concrete

You save labor transportation, and with one stroke increase production and defeat waste.

Put up that necessary building now Cold weather need not stop you.

Write for Bulletins 11 and 137, which will tell you how you can use spare hours to

fight with concrete

CONCRETE FOR PERMANENC

W.S.S. WAR SAVINGS STAMPS ISSUED BY THE UNITED STATES GOVERNMENT

Where is the Bran?

(Continued from first page.)

ates Army Quartermaster Depart-ent is an extensive buyer of bran for s thousands of horses and mules on e battle fronts of Europe and at ntonments in this country. And, it ould be remembered, when Uncle m needs a few cars of bran, there is dickering over taking a quantity flour. The mill is advised of e government's needs, and the bran soon forthcoming. Even where a ill has its bran output sold up for days, as is the case among prac-ally all mills today, government re-irements are given preference. ese requirements will continue rge at least for a year after peace signed.

It is more widely recognized now an ever that bran is selling at a ice today far under the level of ner feedstuffs. For example, in Kan-s City the bulk price of bran per n is $22.26, while No. 1 alfalfa hay mmands $32 a ton. At the same ne, corn was selling at above $1.50 r bushel, oats at 70 cents a bushel, d barley above the $1 level. Other edstuffs might be mentioned, all of ich are selling at a far higher price an bran and shorts. When the price bran was fixed, that is, the maxi-m price at which mills may sell the als, alfalfa hay was worth $22 a n.

Bran in Mixed Feeds

The effect of the artificially low ice on the mill offals is, as previous-pointed out, an unprecedented de-nd. Breeders and feeders of horses d mules, who heretofore never gave nsideration to bran as a feed for uines, have been heavy buyers—ere they could obtain the feed. And erywhere the demand for bran and orts is greater than in normal pe-ds, that is, the low price of the feed s led many live stock producers to empt to reduce their purchases of ner commodities by increasing the ying of bran and shorts.

In order to correct that evil, the ited States Food Administration is empting to equalize distribution d to limit the consumption of bran d shorts to dairy interests, hog oducers, and poultry feeders. This cludes principally those feeders of e stock who were consumers of bran d shorts in normal periods, when e price was on a parity with hay, rn, oats, and other feedstuffs. This helping regular consumers to some tent.

There have been numerous com-ints among live stock interests that ur millers are selling their bran d shorts to manufacturers of mixed d products in large quantities, ther than sell in small lots to the iryman or hog producer. However, re is little truth in this statement. hile it is true that the commercial nufacturer of mixed feeds is eager purchase bran and shorts owing the low level of prices, he is obtain-only a very small quantity, if any all. Where the feed is sold to deal-, considerable flour is shipped in car, usually 60 per cent flour and per cent feed, or on a "50-50" basis. e mixed feed manufacturer has no d for the flour, while, on the other d, the dealer has an available out-. And with the present dull de-nd for flour and corresponding ur-t demand for feeds, the miller is ed in disposing of his flour by of-ing in mixed cars. So it is almost lish to believe that the mixed feed nufacturer is receiving straight s of bran and shorts from mills.

ecast of Good Supplies This Winter

After making a broad study of the eral feedstuff situation, the writer

To help Win the war

TODAY no American shrinks from any sacrifice of a business or personal nature which helps forge a link in the chain of victory. In the forging of one of these victory links the Priorities Division of the War Industries Board, Washington, D. C., has asked manufacturers of Composition Roofings and Shingles to limit the sale of their products to:—

The United States Government and its Allies.

War construction or non-war construction authorized by the War Industries Board.

Structures in which its use may be allowed by permit of the War Industries Board.

Building construction for essential uses and costing in the aggregate not more than $2,500.

Repairs and replacements on all old buildings.

The Standard Paint Company has gladly pledged itself to fully meet these requirements both in spirit and intent. Every one of our distributors of Ru-ber-oid or other of our roofing products has made the same pledge.

We place the program of

the War Industries Board before you, the ultimate consumer of composition roofing, in order that, knowing its provisions, you may more readily assist in carrying it out. Buy composition roofing for the purposes specified *only*. By so doing you will help win the war.

Dairy Day in Alabama

HOARD'S DAIRYMAN:—Dairying in Alabama is progressing far more rapidly than many people know about. Car load after car load of dairy cattle has been shipped into the state during the past year from Ohio and Tennessee. Creameries have been established in practically all sections of the state, and recently there was held at the College Creamery, Auburn, Alabama, the first annual Dairy Day. The idea was to get together the patrons and the prospective patrons of this creamery and have them spend the day inspecting it and see demonstrations in butter making, cottage cheese making, judging dairy cattle, etc. About 60 people were present, these coming from the three surrounding counties, which is the territory from which the College Creamery obtains cream.

The meeting was in charge of Mr. W. H. Eaton, assistant dairy husbandman of the Alabama Extension Service and U. S. Department of Agriculture. The program carried out was one of very special interest to dairymen. Very little time was taken up with formal talks, but demonstrations were the order of the day.

At noon a dairy products luncheon was served in the Creamery building under the supervision of Mrs. Bessie C. Moore, Home Demonstration Agent for Lee County. As its name indicates, this luncheon was composed almost entirely of dairy products, the menu consisting of cottage cheese sandwiches, cottage cheese croquettes, cottage cheese salad, sweet and butter milk, and ice cream. Ground peanuts were used with the cottage cheese in making the croquettes. Those present pronounced it one of the most delightful and palatable luncheons that they had ever had.

This was the first of what is proposed to be an annual or probably semi-annual occasion at the College Creamery. It is believed that these meetings are very valuable, both from the standpoint of information and in a social way. At this meeting orders were taken for a car load of dairy cattle to be bought and shipped in right soon by representatives of the Extension Service.

Alabama. L. A. NIVEN.

New York Butter Market

NEW YORK CITY, Nov 12:—While there is a considerable accumulation of under-grade butter on the market there is practically none scoring 92 or better available except as each day's receipts arrive. However, the percentage of such butter in the daily receipts is comparatively low. Many marks, which during summer months easily pass as extras or better, are now scoring 90 or lower. The most noticeable undesirable flavors in such butter are unclean, oily, and mild fishy. It is difficult for one to account for so much butter showing oily and fishy flavors but it is undoubtedly due to the usual laxity on part of the producer and creamery operator when cooler weather arrives. There is a feeling that it is not necessary to be so careful with milk products during fall and winter months. While theoretically that may be true, actual practice shows the quality of milk and its products to be much poorer during fall and winter than during the summer season. Greater care should be exercised by creamery operators at times when there is a tendency to be lax; creamery patrons should be persuaded to use greater care with their milk and cream; and the buttermaker should be much more critical of his butter than during the period of "grass" production.

Quotations on practically all grades of butter have advanced 2½c during the past week. While the main causes of the advance are the same as enumerated last week, viz., decreased receipts, increased consumptive demand, and scarcity of high grade butter, there is an additional factor which has had an effect on prices. That factor is a strike among the river tug-boat employees and truckmen. While that has been settled its effect has been and is still felt. It is expected by those whose experience in the markets warrants them to be competent authorities that the present high prices of butter will continue without much change throughout the winter.

On Wednesday of last week, extras (92 score) were quoted at 60c. On Thursday there was an advance of one cent and on Saturday the quotation of 61½@62c was established. On Monday the price became firm at 62c and today a further gain of a half cent was made leaving the quotation at 62½c. Additional quotations are: Higher scoring than extras (93 score or above), 63@63½c; firsts (88 to 91 score), 58½@62c; and seconds (83 to 87 score), 54½@58c. There is an active demand for unsalted butter and it is quoted at a differential of two cents over corresponding grades of salted butter.

W. B. LIVERANCE.

A CANADIAN CHAMPION

A new official record of 21,162 lbs. milk containing 704.7 lbs. fat for yearly production in the junior two-year-old division (Canadian Register) has just been completed by Colony Aaggie Pietertje, owned by Colony Farm, B. C. This makes her the Canadian champion junior two-year-old for the production of either milk or fat. She was sired by Aaggie Cornucopia Newman, and is out of Colony Dellah Korndyke that has a two-year-old record of 11,965 lbs. milk containing 428.8 lbs. fat.

The "Black Belt" of Alabama

HOARD'S DAIRYMAN:—I came to the "black belt" of Alabama to investigate and learn if all that I had heard of its advantages, for stock raising, dairying, and diversified farming are true. After going thoroughly over it, for two months, I find conditions far better than I expected. My only wonder is that they have not sooner become more generally known among northern stockmen.

First of all, the soil is naturally good and adapted to a variety of crops. Up to quite recently it has only been scratched—so to speak—not cultivated; the coming of northern farmers is already showing the effect of their methods and is waking southern farmers up to the possibilities.

The mild climate and ten months' growing season permit of two crops of grain, corn, and vegetables; two cuttings of Johnson grass and five of alfalfa; also twelve months of pasture.

Johnson grass when once set is perpetual, with one reseeding. Thes only needs turning and pulveri once in three years and will grow 2 to 3 tons per acre on good land makes better hay than timothy unlimited market for it at from $ to $25 per ton. Bermuda also is perpetual and affords nice pastur frost. If white clover is sown Bermuda sod, it comes on in the and makes good winter pas Johnson and Bermuda grow on kind of land. Alfalfa needs that v is impregnated with lime, whi found in nearly all of the "black l Sweet clover grows naturally or same class of land and affords pasture for cattle or hogs, or cellent hay if cut at proper Oats, wheat, or rye sown in the make good winter pasture and c harvested in time for corn the fo ing season.

Forty to sixty bushels of corn acre are grown on good land properly cultivated and twenty of silage per acre is not unu Velvet beans or cowpeas pla among the corn make a double cr high feeding value. Irish pot mature in time to be followe sweet potatoes, 250 to 300 bushe each are produced under good ditions. Peanuts grow in soil too for other crops. Velvet beans and nuts improve the land, because o nitrogen they impart to the soil

Because of cheap labor in the ing season, immense crops of can be grown profitably to fee cows and hogs.

Hogs pastured on alfalfa, Ber grass, or sweet clover make growth in summer and when tu into peanut and sweet potato f after the main crop has been t off, fatten fast on what is left, b addition of a limited amount of and velvet bean meal. Dairying hog raising can be carried on tog here at much less cost than in North, for the above reasons. Be of mild winters and cheap lu sanitary farm buildings cost less.

There is an unlimited marke all dairy products; modern cr eries are being built in many c In some cases, the proprietor order to increase the supply buy in the North and sell them at co credit, to be paid for in milk cream at Elgin prices. Until r years, Jerseys have been used a exclusively, but now Holsteins coming in considerable numbers becoming popular. Breeding of b ed hogs is very profitable. There unlimited demand because far are just realizing their value.

Deep wells—a large portion of overflow—afford an abundant s of soft water of even temperatur year round.

Good land, well located, ca bought at from $40 to $60 per because of ruin to cotton by the weevil, land that a few years ago not for sale at any price.

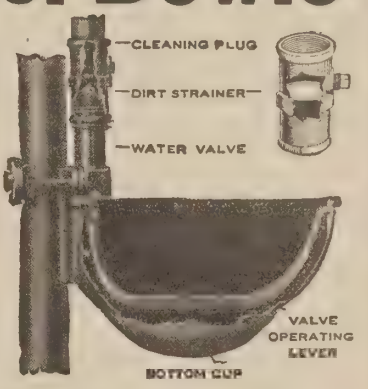
April 1-2, '19—Holsteins. Pure-bred Live Stock Sales Co., Brattleboro, Vt.

Cow Waters Herself

and Increases Milk Yield 15% to 20%

That's what happens when the cow has a Libbey Automatic WATER BOWL within reach.

Milk is 87% water and milch cows must have an abundance of water—whenever they want it, day and night—if they are to yield as much milk as they are capable of yielding. Cows that are watered at a trough two or three times a day never drink as much as they need, and the lack of water cuts down the milk supply. This is especially true in the winter, when a supply of water outdoors is so cold that the cows will not drink nearly as much as they need. In many herds, the cows produce only a small quantity of milk because they do not drink enough water.



Every farmer who has installed Libbey Automatic Water Bowls in his stable, and reported accurate comparisons, before and afterward, has proven that they actually increase the milk supply from 15% to 20%. Some cows have shown an increase of as much as 4 pounds of milk per day.

Libbey Automatic Water Bowls

The Libbey Bowl is a wonderful improvement over all float tank systems. It is a new invention, having been on the market only three years, but in that time 50,000 Libbey Bowls have been sold.

Each Libbey Bowl is automatic — that is, it controls its own water supply and is operated entirely by the cow.
No float tank is required and bowl operates perfectly under any pressure.
Bowls may be placed at different heights and in any kind of stall or pen.
They cannot overflow and cannot get out of order.
No water is left in bowl to become stagnant or for animal to splash out and wet the stall.
No water can pass from one bowl to another, preventing the spread of contagious diseases.
It is the **only** automatic bowl that has a **dirt strainer protection for its valve,** which absolutely prevents any dirt in the water from hindering operation of valve.

It is the easiest to install, and costs the least of any bowl made.

WHAT THE FARMERS SAY:

11 Cows Gain 40 Pounds of Milk
Robert J. Plenty, Rice Lake, Wisconsin, wrote: "The Libbey Automatic Water Bowls are a money-maker and time and labor-saver. My 11 cows gained 40 pounds of milk in one day, after installing bowls. I would not be without the bowls for a good deal."

Libbey Bowl is Very Superior
Guy D. Power & Son, Pankhurst Farm, Auburn, N. Y., wrote: "The water bowls purchased of you in January are giving good satisfaction watering our herd of 54 milk Ayrshires and Holsteins. The Libbey Automatic Water Bowl is a very superior one and is of valuable aid to dairy farmers in increasing their milk yield."

Best He Has Ever Seen.
Alphonse LaBelle, Harris, Michigan, wrote: "I have been using the Libbey Bowls and the Libbey Stanchions for some time, and they are the best that I have seen. The Water bowls keep up the milk yield of the cows and the Stanchions are mighty comfortable on the cow's neck and handy for us to use, so I consider them both good, valuable equipments for any barn, and would not sell them for twice what I paid for them if I could not get more like them."

Libbey Litter Carriers and Stanchions

Libbey Litter Carriers are simple, strong and easily stand the hard knocks without getting out of order. "Lock" and "trip" always on the job. Made to fit any size or style of stable. Save manure; your farm needs it.
If interested in Carriers or Sanitary Steel Stanchions or Stalls, ask for General Catalog.
If interested in Water Bowls, ask for Water Bowl Book, also **free Daily Milk and Feed Record.**

C. A. LIBBEY COMPANY

100 Marion Street - Oshkosh, Wisconsin

How the Cow Operates

A little water always remains in bottom of bowl. When the animal is thirsty, it attempts to reach this water and pushes lever to one side, which opens the valve and lets in fresh water about as fast as the animal can drink. When the animal has had enough, it will raise its head, and this lever will swing back to its mid-position in the bowl and the valve will close, shutting off the water.

All modern conveniences will be supplied in the dormitory. Arrangements will be made to take care of students entering the winter term and desiring board, in temporary quarters until the new building is completed. E. A. POLLEY, Supt.

Not until shell-torn battlefields are turned into wheat fields will Europe cease to look to us for food.

L. P. Bailey & Sons Jersey Sale

L. P. Bailey and Sons, Ohio, were unfortunate with their October 26th sale in that their sale date chanced to come while the influenza epidemic was at its height, a fact that undoubtedly resulted in a very considerable loss to them. As it was, the cattle sold fairly well, the entire 80 animals bringing an average of $117, most of them being purchased by local buyers.

Thelia Captain, a 2-year-old bull, donated by Bailey and Sons to the Red Cross, topped the sale, selling for $510 and a second time for $200. He is by a grandson of Noble of Oakland and from a Register of Merit daughter of Pogis 49th of Hood Farm, and was, moreover, a winner at several state fairs last season.

Silver Marigold Aster, a 5-year-old cow with a 3-year-old record of 411.76 lbs. fat, was high priced female, going to C. H. Plumley, Ohio, for $400. The entire lot of 74 females sold for an average of $108, the 6 bulls for a $225 average.

Col. Perry did the selling.

Warts

I have a calf with a bunch on his shoulder as large as a quart dipper; it is black and rough like a wart. It is soft and seems to be just attached to the skin. Two smaller ones are coming on his back. Please tell me what this is and what to do for same.
Patten, Me. H. N. B.

Twist off the warts, or they will fall off after a time if you ligate them tightly with a fine cord, or put on some small rubber bands. Apply nitric acid to any wart that has not a narrow neck, first applying lard or vaseline freely to the sound skin.

EDITORIAL COMMENT

"If it were done when 'tis done, then 'twere well it were done quickly." Such was the decision of the military and commercial over-lords of Germany on that fateful summer day in 1914. Their greedy cupidity for power and wealth has finally been overthrown. Their rape of Belgium and the horrors committed in France and on the sea pled like "angels trumpet-tongued" against them. "And pity, like a naked new-born babe, striding the blast, or heaven's cherubin horsed upon the sightless couriers of the air, has blown the horrid deeds in every eye, that tears shall drown the wind. They had no spur to prick the sides of their intent, but only vaulting ambition, which o'erleaps itself and falls on the other."

Plans have been made and men are being engaged to help reorganize the agriculture of France. There has been formed under the auspices of the National War Council of the Y. M. C. A., "Army Overseas Educational Commission", which, working directly under the authority of General Pershing and of the Y. M. C. A. secretary in France, will undertake all the educational work among the American soldiers overseas during the war and particularly during the demobilization.

As we understand it, France has been divided into seven geographical regions and each region will have what is known as a Regional Director of Agricultural Education. In each region there will be employed agricultural specialists in such fields as soils and fertilizers, live stock production, farm management, etc. A number of speakers who can stay in the field practically all the time, addressing groups of men interested in agriculture, have been secured.

The plans are to select teachers from American officers and enlisted men to do the teaching, these men to receive training from those who have been selected from this country to carry on this educational enterprise.

KEEP THEM THERE

In "The Dairy Optimist" column of this week there is a splendid story for fathers and mothers. Learn from it and from the short letters of the junior dairymen that appear weekly what ownership and responsibility do for a boy. These are not only interesting reading, they are something more. They are to be read and acted upon, they go to the fundamentals of human nature. Give that boy a fair opportunity, be wise, be patient. Don't drive your boy from the farm, keep him there.

ORDER FERTILIZERS NOW

Those desiring fertilizers for next year's crop should order them now. It is to their advantage as well as to the government to place orders early for fertilizers. The farm labor situation is likely to be quite as acute this coming spring as it was last spring. It is therefore prudent that materials of every kind be purchased now, so that they may be taken to the farm and stored, ready for use next spring. This will save time next year when it is more valuable than during the winter, and permit the fertilizer companies to fill their orders. These institutions, as well as the farmer, are short of labor, but if their business can be spread out over a longer period they will be able to fill their orders. Last spring about 20 to 25% of the farmers ordering fertilizers were unable to get their orders filled because of the lack of labor and the congested railroads. Let us not make the mistake of last year, as the world needs all the food the American farmer will provide. There be will no danger of overproduction as no country in the world has a surplus of food; on the other hand, the grain bins are very low and every effort should be put forth to replenish them.

VITALITY AND HEALTH

The past few years we have published many articles which have shown the bad results of feeding animals faulty rations. Illustrations have been presented showing the effect upon growth and development of a ration lacking in essential substances. These lessons have brought useful information not only to those anxious to feed their animals properly but have also shown the importance of paying more attention to the diets of human beings. They have clearly revealed that it is the little things, the undetermined substances chemically, that effect growth and health of all animal life.

Dr. E. V. McCollum, who prepared a series of articles for us, has also written a book in which he discusses the information which he secured with animals of various kinds through many years of experimentation. It is published by The MacMillan Co. and is entitled "The Newer Knowledge of Nutrition". It discusses the use of food for the preservation of vitality and health.

Dairymen should be much interested in this book, for milk and its products are given unusual prominence. Their importance in human diets are clearly revealed.

OTIS TO FRANCE

Professor D. H. Otis of the Wisconsin College of Agriculture, who has been in charge of the Wisconsin farm management demonstration work, has been given a leave of absence to engage in his chosen field of work in France. Professor Otis expects to have charge of the men selected to do farm management work in the several agricultural districts of France and also to assist in selecting and training teachers from the American officers and enlisted men of the army.

The opportunity in this service is unique. Agriculture holds an important place in France and while much attention will be devoted to the teaching of technical agriculture, there will be a splendid opportunity to influence the soldiers in respect to their attitude toward the great economic and social questions of agriculture. Great changes are coming not only to the industries of the city but to agriculture as well. While this group of men goes forward to France to help reconstruct the agriculture there on a basis to meet new conditions, we may well consider plans to be adopted for improving the agricultural situation of our own country.

Professor Otis is well prepared to help organize the new agriculture of France, and may he gather information which will assist us when he returns.

REWARD FOR RIGHT PRACTICE

Mr. G. H. Clark of Washington, a subscriber of Hoard's Dairyman, has written us as follows: "October 26th I had an auction sale of 35 grade Holstein cows. They averaged $191.30 each. I bred them up in the last six years. Only four matured cows gave less than 10,000 lbs. of milk last year. This was my first attempt at farming. I read Hoard's Dairyman every week."

The experience of Mr. Clark shows what can be done with a pure-bred dairy bull. The prices which he received for his grade cows were not more than they were worth. The prices at which they sold brings forcibly to our understanding the value of good blood and argues strongly in favor of breeding all dairy cows to a pure-bred bull. Why dairymen should be content to continue with scrubs when the opportunity for breeding improved animals is so easy to take advantage of is difficult to understand. No man who breeds inferior animals is securing for himself or his family all the reward that is possible for him to obtain. The keeping and rearing of well bred animals not only brings a greater monetary reward but puts a deeper satisfaction into the work of the farm. We must ever keep in mind that enjoyment and satisfaction come to us very largely through the character of work we do.

VICTORY

Monday morning, November eleventh, our citizens were awakened from their slumbers by ringing bells and shrieking, whining whistles. These were pleasant sounds and the ears of every person were tuned to their notes. The President had announced that the armistice had been signed by Germany which was in effect an unconditional surrender. The welcome news spread like lightning to every home in our broad land and hearts leaped with joy and gladness, for it meant peace. The world has suffered pain, misery, and death for more than four years and the souls of men were heavy laden.

The news that hostilities were to be suspended was like the voice of the Master announcing "peace on earth and good will toward men". People gathered in the streets and public squares where bands played and paraded and where there was singing and speaking. Every living soul by dawn was doing something to show his exaltation over the ending of the war. Some laughed, some cried, some shouted, and some were silent. No matter what was done, it all expressed the joy of victory and the ending of a cruel, diabolical, devilish war.

In a true sense it was the celebration of victory and not of peace. But which ever way construed, it was a happy day for us and most of the people of earth. It was the greatest day the world has ever known, except one, and on that day Jesus Christ was born.

THANKSGIVING

We never had greater reasons for thanking our Creator for the rewards of harvest, and the blessings which this Thanksgiving has brought, than we have this year. Our country has been given a generous crop and the great world's conflict has ceased. And we are truly thankful for both.

For more than a year and a half we have shared our fortunes with the allies for the purpose of crushing autocracy. We not only sent soldiers and munitions across the sea, but also the food which was the one great need of Europe. The large supply of food which we sent seemed to call for a still larger supply. Appeals everywhere were made to our farmers to increase their crop production that food might be abundantly supplied, and they responded generously.

In this hour of victory we must not forget those who need a liberal portion of our food. The world is hungry and some nations are starving. We can do humanity no greater service or render ourselves a deeper satisfaction than to share our generous supply of food with them. We are indeed grateful that America is able to do this, and it is with thankfulness that we again approach the task. The ending of hostilities does not mean that we may return to our former wasteful practices of using food; it means, rather, that we must tighten our belts still more and supply a larger number of people with the necessities of life.

This thanksgiving not only affords the opportunity of returning thanks to the All Kind Provider for a victorious peace and for our generous harvest, but also to consecrate ourselves to render the needy nations of earth a still larger service. As we contemplate our gifts and our opportunities as we look upon the sacrifices of the past, we see ringing in our heart of hearts the immortal words of Lincoln: "It is rather for us to be here dedicated to the great task remaining before us—that from our honored dead we take increased devotion to the cause for which they gave the last full measure of devotion."

IMPROVING FEED LAWS

The New York State Food Commission is making an effort to strengthen the present laws regulating the manufacture and sale of animal feeding stuffs. Attempt was made some weeks ago to strengthen the national laws regulating feedstuffs through the Gore Amendment. We opposed this amendment not because there is not a necessity for better feed laws but because of its imperfections. As the amendment was drawn, it would neither provide the information which dairymen desire nor would it give them greater protection than the present feed laws.

We have gathered information from many sources regarding the feasibility of improving the state and federal laws governing the manufacture and sale of feeds. There seems to be no definite agreement as to how it should be done, but every communication expressed a desire for feed laws which will give more information to those buying feeds. One feed manufacturer suggested that the laws might be improved by requiring the percentage of all ingredients low in nutrients to be stated upon the sack. This particular manufacturer is making a mixed feed which contains 20% oat clippings, and informs its customers to this effect. The company is willing to put a label upon the sack that this feed contains 20% oat clippings. If the feed laws were amended to require the percentage of materials of low feeding value to be printed upon the sacks, the purchaser would receive all the information desired. It is our opinion that all worthless feed materials, such as rice hulls, buckwheat hulls, and cocoanut shells, etc., should be prohibited by law. These substances are worse than worthless.

There are those who favor labeling the proportions of ingredients used in a mixed feed upon the sack and also to require the digestible nutrients be stated. Those well informed hold that such a law would be unconstitutional. This judgment is based upon the rulings of the Supreme Court upon laws requiring patent medicine manufacturers to print upon their labels the proportions of the ingredients used in their medicines were unconstitutional.

It is also held that to state the digestible nutrients would be next to impossible because the mixtures of necessity must change to some extent. Even the different ingredients will var

composition. It would seem at the present time that all we can look forward to is a law which would require the feed manufacturer to state upon the sacks the percentage of feeds low in nutrients and to prohibit the use of worthless materials as an ingredient for a mixture.

Feeding Suggestions Wanted

Please make a balanced ration that would be easily made by our local farmers on their own farms, using the material which is plentiful here, and which would take that place usually occupied by prepared feeds of various kinds. We had an abundant crop of barley in this county this year, also a large crop of oats, and most of our dairymen have plenty of good corn silage. Some of the farmers have a quantity of clover hay or alfalfa, though it as not very plentiful, and a few have silage containing soy beans. Others have soy bean hay. What would be a good ration for a dairy cow, using corn silage, oats, and barley, and what would have to be added? How much should be fed? We will welcome any suggestions that you might make.

Green Co., Wis. J. W. S.

Barley is one of the cheapest feeds in Wisconsin this fall. It is nearly equal to corn for milk or pork production. Oats is a little superior to bran and it is costing a little more at the present time, but since bran is difficult to get, it is advisable to use oats as it is cheaper than most other feeds on the market. In suggesting combinations of meals to supplement the roughage that the farmers have in the community, we would use barley and oats liberally. It should be borne in mind, however, that corn can be substituted for barley or bran for oats.

A cow weighing 1,000 lbs. will consume about 30 lbs. of silage daily; some will require a little more, others less. In connection with the corn silage, we would feed each animal a liberal amount of dry roughage. Alfalfa, clover, and soy bean hay are far superior to timothy or corn stover. In the absence of these protein hays, like alfalfa, clover, and soy bean hay, it is necessary to provide a mixture richer in protein than oats and barley will provide. For a farmer having a high supply of either alfalfa, clover, or soy bean hay, a mixture, equal parts by weight, of barley and oats will supplement the roughage nicely. Feed about one pound of this mixture for each 3½ to 4 lbs. of milk produced, depending upon the physical condition of the cow and her flow of milk. If there is only enough of the high protein hays that it will be necessary to use the amount to five pounds daily, and that stover or timothy will have to be used to supplement the clover or alfalfa, then we would use the following mixture: 400 lbs. of ground barley, 300 lbs. of oats, and 100 lbs. of oil meal or cottonseed meal. If the farmer has no silage, then we would advise the use of oil meal although it costs a little more per ton.

For farmers with an abundance of silage, alfalfa, clover, or soy bean hay, we would not advise the feeding of any grains to any cows producing less than 18 lbs. of milk daily, unless they are very thin in flesh and it is desirable to put them in better physical condition. Where timothy hay is the only dry roughage to supplement the silage, we would then suggest a mixture of 300 lbs. of ground barley, 300 lbs. of ground oats, and 100 lbs. of gluten feed or dried distillers grains or brewers grains, and 100 lbs. of oil meal or cottonseed meal. We would advise the same mixture if the hay were clover and timothy. In all instances, we would feed about 1 lb. for each 3½ to 4 lbs. of milk produced. This means that if a cow produces 24 lbs. of milk daily, we would feed from 6 to 7 lbs. of the meal mixture.

It is well to provide the cows with an adequate supply of salt. One ounce a day may be fed in the grain portion of the ration, or it may be kept in a box where the cow has access to it at all times. Furthermore, supply an adequate amount of water for it means a larger flow of milk. Very often a cow does not receive enough water and her flow of milk is reduced from 5 to 10%.

It may be said, too, that a great many of our cows are unprofitable because the farmers try to produce milk on corn stover and on home-grown grains like barley, corn, and oats entirely. There is no possible way of supplying the cow with sufficient protein on these feeds, as no combination can be made of them which will supply an adequate amount of protein. Protein is the substance in milk which makes the casein in milk. Very often the farmer is feeding a liberal supply of home-grown grains and his ration costs him more than it should, but still the flows of milk of his cows are reduced because they need a pound or two apiece of some high protein feed like oil meal, cottonseed meal, gluten feed, distillers grains, or brewers grains. The feeder must bear in mind that there may be some little thing in the ration that is limiting the production of his herd.

Feeding Meal Portion of Ration on Silage

I have ten registered Holstein cows, partly heifers with first calf. The greater part of them have freshened during the month of October, and the rest of them will freshen during the next two weeks. They are all heavy milkers. My roughage consists of good corn ensilage, bean pods, and corn stover. I have no hay. I have about 370 bushels of oats and peas, about one-third peas; about 400 bushels of ear corn, and I have enough bran so that I could let each cow have from 2 to 3 lbs. per day for the next 60 days. I may be able to get more later. Other feeds are high in price. Unicorn is selling for $69 per ton. As stated before, my ensilage is of good quality containing a good amount of grain. Wouldn't it be a good plan to sell the corn which I have left and buy other feed, or would it be just as well to feed some corn in the ration? I can get cottonseed meal for $3.25 and Old Process oil meal for $3.35 per hundred pounds. I always have been feeding the grain with the ensilage. Do you consider this a good practice or is it better to feed both separate? I expect to raise all the heifer calves. Will the same ration do for the calves as well? I will feed them some skimmilk and clover and timothy mixed hay.

Vassar, Mich. F. J. L.

Since our inquirer does not have an abundant supply of good dry roughage, we would suggest using a greater amount of silage than usual. We believe cows could be fed about 35 to 40 lbs. daily and then supplement this with corn stover. Bean pods are not very nutritious and we would not advise feeding any considerable quantity of them.

A mixture consisting of 300 lbs. ground peas and oats, 200 lbs. corn meal, 200 lbs. bran, and 100 lbs. oil meal would go very nicely with the roughage. Feed about 1 pound of this mixture for each 3½ to 4 lbs. of milk produced.

It is quite common to feed the meal portion of the ration on the silage. We consider this a good practice, especially if the meal is a little heavy. This method is preferred by some dairymen even though the meal mixture is light and some claim that they get better results by feeding the meal in this way. We do not have any definite information indicating whether there is any great advantage, but we feel certain there is no disadvantage under any condition.

It is quite possible that corn may be exchanged for barley. Barley has about the same feeding value as corn and may be used in its place. In Wisconsin, barley is considerably cheaper than corn and is being quite generally used for feeding cows this year.

Calves six or seven months old can be fed the same mixture of feeds as is provided for the cows, together with some silage and clover and timothy hay. For calves three or four weeks old and until they reach that many months, we believe that whole oats and bran mixed equal parts by weight would supplement the skimmilk and hay better than the ration suggested for the cows. Even mixing whole corn with these feeds would not be out of place. The young calf does better upon whole grain than when it is ground. After reaching the age of 5 to 6 months, the calf makes better use of its feed when ground.

Growing Sunflowers for Silage

I am told a man in Lewis Co., New York, grew an acre of sunflowers during past summer and in fall harvested them and put them in his silo the same as corn. What is your opinion of this practice? Have they good stock feeding value? Do you think they would make good silage? How much protein in them? When should they be planted, how cultivated, and when harvested?

Boonville, N. Y. B. A. C.

Sunflowers have not been used for silage for a sufficiently long period of time to establish just what the proper method of feeding and handling may be. At the Montana Experiment Station they first planted them in rows 3 feet apart, but later drilled them in rows 28 inches apart, using 20 pounds of seed per acre. In a general way, sunflowers should be planted and handled much as corn is handled. In some cases we have known of, sunflowers and corn were mixed and planted together, but sunflower seed should not be planted until the ground is warm and in good condition.

At the Montana Station, which is located at a somewhat high altitude where early frosts are prevalent, they first cut the sunflowers for silage when about 5% of the plants were in bloom, but before any seed or grain had really formed. Their next cutting was made shortly after frosts but the plants were no further advanced in maturity. Under New York conditions sunflowers would probably be cut into the silo at about the same time as corn.

The feeding value and composition of sunflowers was discussed in our issue of November 15. Although chemical analysis would seem to give a higher protein value to sunflowers than to corn, feeding trials thus far indicate that silage made from these two plants is equally valuable for milk production. This comparison was made, however, in a section where corn does not mature well. Where corn grows well it may be questionable whether sunflowers would be as valuable and wider experience is necessary.

Using Angus Bull on Guernseys

I have as many grade Guernsey cows (about 35) as I desire and not wishing to breed pure-breds, I am thinking of buying a Polled Angus bull so that I may raise the offspring to sell over the scales. Would you consider this a good proposition?

Long Prairie, Minn. W. W. B.

We see no objections to the use of an Angus bull providing it is not desired to continue to improve the dairy herd. However, if one is looking for increased dairy profits, it would be a most unfortunate system of breeding to adopt.

While the use of a beef bull will give progeny that may sell for a little more money than calves or steers from a Guernsey sire, yet this will not be sufficient to offset the dairy losses which are almost certain to follow. No breeder can stand still—he must either go forward or backward.

Our inquirer says he now has 35 head of grade cows. It is quite possible that these may all be very high producing animals, but this would be most unusual and it would be particularly unusual if some of them did not go backward next year and in the succeeding years. The influx of young animals of proper dairy ability is quite essential in maintaining the dairy production of the herd, to say nothing of increasing that production. It is reasonable to suppose that if a pure-bred Guernsey sire of good ability is used, his offspring will be superior to the grade animals which are now in the herd. It is in this manner that one can build up a more profitable herd, and profit is about what all men are looking for from their business.

Grind Barley for Hogs

I want to feed some barley to hogs with a self-feeder. Can I get the same results by feeding the barley whole and letting the hogs grind it themselves as I can by grinding it first?

I am feeding my cows ground barley and oats (2-1), about 1 lb. of ground feed to 4 or 5 of milk; also alfalfa once a day and corn in the bundle twice. Could I better the ration any to produce a greater amount of milk at a profit? I can get oil meal for $60 per ton and other feeds at around $45 to $50 per ton, such as gluten.

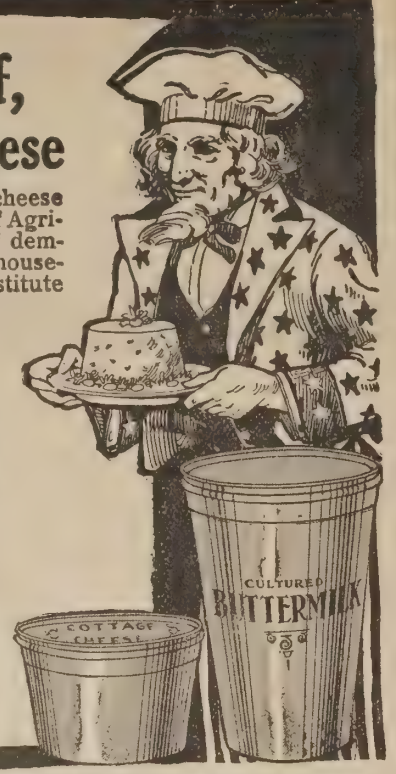
Grays Lake, Ill. L. B. C.

It is better to grind or roll barley fed to hogs. The berries of the barley are rather small and hard and for this reason do not give the same returns when fed whole as when ground or rolled.

For cows producing heavy flows of milk, from one-half to one pound of oil meal might be fed. Oil meal helps to keep the animal's digestion in good condition. If corn silage were available then we would not suggest oil meal, as the ration would be good without it.

We would suggest that if whole corn is being fed it would be more profitable to husk and grind the corn. Whole corn fed to cows or steers is not all utilized. About 20 to 23% of the corn will pass through the animal unused. In other words, there will be a waste of that much unless hogs follow the animals and this is not always practical in a dairy.

Ration with Clover and Silage



Kindly balance me a ration for milking cows with some of the following feeds: Gluten, cottonseed meal, hominy, corn meal, bran, middlings. For roughage we have clover hay and silage.

Erie, Penn. W. W. C.

We suggest that each cow receive 30 lbs. of corn silage daily. Some will require a little more, others less. In connection with this, let each animal have a liberal supply of clover hay. A mixture consisting of 400 lbs. hominy meal or corn chop, 300 lbs. bran, and 100 lbs. gluten feed will supplement nicely the silage and clover hay. Feed about 1 pound of this mixture for each 3½ to 4 lbs. of milk produced; that is, to a cow giving 24 lbs. of average testing milk, we would feed six to seven pounds of meal.

Uncle Sam, Chef, Serves Cottage Cheese

More than 50 ways of utilizing cottage cheese have been evolved in the U. S. Dept. of Agriculture laboratories. A little army of demonstrators has been sent out to show housewives how this nourishing meat substitute can be used in every course "from soup to nuts". Cow Health is Dairy Wealth

Safeguard the health of your herd by building stables that will be clean, sweet and sanitary. It is easily done if you build with Natco Hollow Tile. Germs can't hide on the smooth glazed walls. A blanket of dead air in Natco walls keeps the stable warm in winter and cool in summer—prevents dampness and mildew.

Natco on the Farm

means healthier stock, cleaner and better milk—bigger profits and more dairy wealth. Natco Hollow Tile has fire-proofed most of the great "skyscrapers" of our large cities. The same material will protect your stock, grain and tools from the fire peril and will lower insurance charges. Natco buildings save painting and repairs. They cost less than other forms of masonry yet add greatly to the value of your farm.

Your building supply dealer will gladly show you samples and practical building plans. He has, perhaps, just the plan for which you're looking. But write us direct today for new illustrated "Natco on the Farm" book —1919 Edition —it's free!

Cheese

Have you ever stopped to think that cheese is milk in a very condensed form? Cheese is thought to be the oldest of the dairy products and the first form in which milk was preserved. It probably owes its origin to the accidental storing and ripening of sour milk curd.

At present cheese should be used extensively in our diet in place of meat. It is not only cheaper, but is more valuable as a food than is meat. For example, one pound of American cheese contains as much muscle-building material as one and one-half pounds of sirloin steak, furnishes almost twice as much energy as two pounds of sirloin steak, and costs half as much. It is easily kept and prepared for the table and has an appetizing flavor and lends itself to many ways of serving. One of the best ways to keep cut cheese is to wrap it in a slightly damp cloth, then in paper, and then kept in a cool place. Paraffin paper is also very satisfactory for wrapping. If cheese is kept in a covered dish, the air should not be entirely shut out, because in that case the cheese will mold more easily.

If properly cooked and sufficiently masticated, cheese is readily digested by the normal healthy person. By properly cooked cheese, I mean cheese cooked at a low temperature, below that of boiling water. If it is to be a boiled dish, the mixture should not be allowed to boil after the cheese is added; if it is to be a baked cheese dish, the mixture should be put into a baking dish which is set in hot water in the oven. The water should not boil. When cooked hard, cheese becomes stringy and tough, and cheese in this form is indigestible. When cooked at low temperature, cheese is soft and tender.

Cheese dishes are as delicious as they ase varied and numerous. We find use for cheese in soups, sandwiches, salads, pastries, and escalloped dishes, all serving as meat substitutes. When cheese forms the main dish in the meal, crisp vegetables and fruits should be served with it.

Welsh Rarebit

1 tablespoonful fat,
½ tablespoonful corn starch,
½ teaspoonful salt,
½ teaspoonful mustard,
½ teaspoonful paprika,
1 cup milk,
1 egg, beaten lightly,
½ cup soft cheese.

Make white sauce from first six ingredients. Remove from fire, add egg and cheese, and stir until cheese is melted. Serve on toast.

Many varieties of rarebit may be made, using the above for a basis and adding ½ cup of cooked cereal, such as rice, barley, and hominy.

Cheese Souffle

½ cup milk,
1 tablespoonful corn starch,
2 tablespoonfuls fat,
½ teaspoonful salt,
½ cup grated cheese,
3 eggs.

Make white sauce. Remove from fire, add cheese and beaten egg yolks, stir until cheese is melted. Cool slightly, add beaten egg whites. Pour into a greased baking dish; stand in hot water in slow oven 30 minutes.

Cheese Patties

1 cup milk,
2 tablespoonfuls corn starch,
3 tablespoonfuls fat,
½ teaspoonful salt,
½ teaspoonful paprika,
2 cups soft cheese,
2 egg yolks,
Bread crumbs.

Make white sauce, remove from fire, add beaten egg yolks and cheese; stir until cheese is melted. Cool and

ve and sprinkle over the toast.
Cheese may be added to an egg
elet in several ways:
1. Serve an omelet with a cheese
uce.
2. Sprinkle grated cheese over an
elet before serving.
3. Grated cheese may be added to
e egg mixture before the omelet is
ked.—CHRISTINE FRANDSEN in The
yoming Farm Bulletin.

It is estimated by the Bureau of
rop Estimates that the number of
ock hogs September 1, 1918, was
,066,000, an increase of 4,848,000
a year.

You should use UNICORN DAIRY RATION

Because—it will make more milk and cut down your milk costs.

Because—you can save from 10 to 20% of your feed costs through the use of fewer pounds of grain per cow and the increase in milk or fat per cow.

Because—there is 10% more available food material in Unicorn than in any ration on the market.

Because—it saves labor and the mistakes of mixing and feeding. It is always uniform and reliable.

Because—Unicorn Dairy Ration is suitable for feeding alone, or can be fed with home-grown corn, oats or barley. Unicorn contains ample protein and may therefore be used either as a protein feed or as a complete ration.

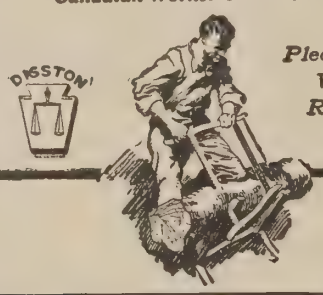
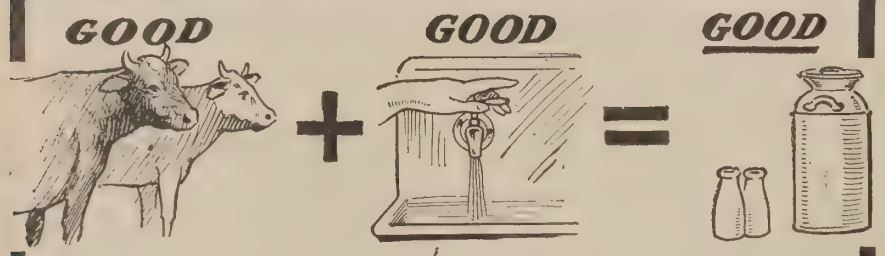
DISSTON
SAWS AND TOOLS



If You Can't Get Coal—
Burn Wood

Coal will be scarce this winter—and hard to get. Thousands will turn to wood for fuel. If you're a fore-handed man, invest now in a Disston Cross Cut Saw and a Disston Buck Saw for tree-felling and cutting into stove lengths. Disston Saws can't be beaten for quality. They're made right—from saw steel of our own manufacture. There's nothing "just like it." Disston Cross Cut and Buck Saws eat up the trees and the wood pile. Look for the Disston Trade Mark on the saw you buy. It means long life and workmanship at its best.



Disston hand-saws are used by three out of every four carpenters in the United States. Disston Saws and Tools are sold by progressive hardware dealers the world over.

Principles in Breeding Pure-breds

(Continued from page 583)

been proven a most satisfactory investment. The calves are left with their dams anywhere from three days to three weeks, depending on whether we wish to test the dam or not. The cow is then taken away and the calf left in the same stall until broken to drink. It is then moved to a box stall where it stays about a month or so and then two calves are put together in one stall of larger size. The floor of this is of cement and cork brick. The frame and partitions are of wood. We have as much window space as possible and a skylight.

We feed milk to all the young calves three times daily and we are very careful about over-feeding. They also get good, sound clover hay and some grain—corn, bran, oats, and oil meal. All the hay and grain is fed by hand, not fork or shovel, and extra care is taken to guard against bad hay. It seems to mean sure death. After the calves are about four months old they get a little silage.

Establishing Friendly Relations With the Animals

The calves are all named at birth and treated as individuals. I believe in talking to them as much as possible. All our calves know their own names and their own stalls. I believe in emphasizing the individuality of each one of them as much as possible. Later in life, when the test cow is called on to go to the top of the list, or the bull to show at the National, this early training will count, and count big. Every great handler of cattle treats his animals as friends and equals. Success in the pure-bred business is impossible without that feeling in the organization.

My calf man has a simple remedy for scours that seems to work: A light dose of castor oil, followed by three feeds of boiled milk with an occasional raw egg.

When the heifers are six months old they are turned on pasture if it is spring, or moved to the horse barn if it be winter. In either case they spend the first winter in bunches of six to ten in a large box stall in the horse barn. They have plenty of hay and ensilage and about three pounds of grain each. They run out all day in all weathers. We generally feed a little long fodder in the field and bed on shredded fodder. The second winter they spend in bunches of about a dozen in the open heifer shed. Here they are fed as before, care being taken that the larger heifers do not impose on the smaller ones. We generally tie them up to feed grain and silage, and keep the hay rack full.

Our heifers are bred to freshen at from two years to thirty months the first time and at about 40 to 45 months the second time. All are given a record the first trip and are about 15 months between the first two calves. Afterwards we plan for a cow a year and always test those we feel will add to the reputation of the herd or some particular family.

When Records are Made

The herdsman, John Barehman, follows the method of treating each animal as an individual and his favorites will follow him all over the field. We have practically no set rules for feeding the test cows. We generally start the heifers on from six to eight pounds and raise them a pound a week until we think they are getting enough. We milk three times a day, but the night period is generally ten hours long, except in a few special cases where I have taken the night milking myself.

We believe in exercise for all the herd, not for the sake of record, but for the sake of the cow. All the two cows run out in a forty-acre lot the night, from the first of May until frost. And they go out every forenoon all the year round unless we happen to have a severe blizzard or a storm.

We have had six cows drop in calves each, three a dozen, and ones carrying her thirteenth calf besides having made three records, two of

GUERNSEY COW, CLARE OF POPLAR GROVE 3RD, AT 15 YEARS OF AGE
At 12 years she has a year's record of 13,170 lbs. milk, 568 lbs. fat in Class AA.
Owned by Louis McL. Merryman, Maryland

which are practically 700 pounds each.

In feeding the test cows we follow more or less the principles that have given others success. In 1914 I paid a visit to Anna Dean Farm and Messrs. Murphy and Gockerel were most kind in giving what information they could. Since then Mr. Gockel has visited us here at Gerar once and I have had the pleasure of spending the day with him several times at Pencoyd. Mr. Blake Arkcoll has been kind enough to help us several times and we more or less swear by his judgment.

While not making any very large records we have some of a little credit. Since 1912 we have had two half dozen first calf heifers make over 500 pounds fat, and one over 600. We now have four more on test that will do as well. In the older division of the Guernsey Advanced Registry we have the leader in DD, third cow in BB, eleventh in CC, and a former leader in AA. A twelve-year-old cow made 697 pounds fat and we have one in B that will make over 700 pounds.

Selling

The first and greatest principle in salesmanship of cattle is absolute honesty. Every customer should be treated as a future buyer rather than as a present sucker. One should spare no pains to maintain pleasant and cordial relations with his customers. There is no better advertisement than

satisfied customer and nothing can
you more harm than one with a
grievance. Remember, also, that you
are selling your personality as much
as your cattle and that no one who ex-
pects to make a success of breeding
pure-bred stock can do so by staying
at home. I feel sure that I can no
more afford to stay away from the
National, the annual meeting of the
club, and the big sales than I can af-
ford to give cows 300-pound fat rec-
ords that can make 500 pounds.

In the actual selling a thorough
knowledge of the blood lines of the
animals is very essential. Nothing
makes a worse impression than an
owner who does not know how his
animal is bred and, in many cases,
does not even know his animals. I
have seen sales made because a seller,
knowing the blood lines of his own
stock, and also of that of his custom-
er, could present arguments in favor
of certain crosses thus made possible.
On the other hand, I have seen ani-
mals of superb breeding sold for half
value because the seller was not post-
ed on breed history.

In conclusion, let me state that all
the money and knowledge in the world
will not make a man successful with

GUERNSEY BULL, CLARE'S PATENT KING, SON OF CLARE OF POPLAR GROVE 3RD
OWNED BY LOUIS McL. MERRYMAN, MARYLAND

pure-breds if his animals do not come
first all the time. And one without a
real love for animals can never hope
to make a success of it either.

Where is the Bran?

(Continued from page 589)

feels safe in forecasting a freer move-
ment of bran and shorts, and larger
available supplies in the present crop
year. But this change will not take
place over night; two or three months
or possibly a longer period will be re-
quired. Purchases of flour by the
United States Grain Corporation for
export to Europe are increasing each
week, according to Food Administra-
tion advices, while grain exports to
Europe are diminishing. It is un-
officially estimated that more than
30,000 barrels of flour are being pur-
chased for export each week by
the government grain corporation.
Should food officials decide to resume
the exporting of flour almost exclu-
sively, the practice in the last crop
year, the most helpful step toward
correcting the acute shortage prevail-
ing today would be accomplished. Also,
restricting sales of bran and shorts
to dairy producers, hog fatteners, and
poultrymen, and in requiring millers
and feed jobbers to distribute their
feed in such a manner that each state
receives the same proportion of the
miller's or jobber's shipments as it
received in the same period of 1917,
will eventually aid the market situa-
tion. Certainly, it is not altogether
just to allow live stock producers who
never gave consideration to the use
of mill offals as a feed, who turned
from the market when the price was
above the $40 level, to make large
purchases today because the price is
artificially low.

Declines in the corn market in the
last few weeks have amounted to ap-
proximately 50 cents a bushel; oats
have slumped; and the prices of other
feedstuffs have weakened as a result
of these recessions. Should the range
of prices of all feedstuffs decline
further, thus narrowing the margin
between mill feeds and other commod-
ities, lighter consumption of the offals
would result. However, the outlook
for lower prices is not bright, even
with the present international political
situation. The season of bullish rail-
road freight conditions is at hand.

Western ranges generally are in ex-
cellent condition, and recent rains in
the Southwest will make possible
grazing a month or two longer than
usual. These are important influences
which will have a tendency to "loosen"
the stringent shortage of bran and
shorts.

But dairymen who are hoping for a
return to normal conditions in the de-
mand and supply situation in the bran
and shorts trade should dispel such
notions. Peace will not enlarge the
supply greatly. It is a practical im-
possibility to effect a return to nor-
mal conditions in the mill feed trade
during the present crop year, or as
long as the fixed and artificially low
price continues in effect. But there
is more than a possibility of freer of-
ferings of offals within the next few
months.

Butterfat Price in Texas

HOARD'S DAIRYMAN:—The Falfur-
rius Jersey Dairy company of Texas,
which is owned by Ed. Lasater, is now
paying the farmers and dairymen of
that section 67 cents for butterfat.
This is said to be the highest price
ever paid for fat in Texas. In addi-
tion to its regular shipments, the
company is now shipping one thou-
sand pounds of butter daily to the
Quartermaster Department, Camp
Travis, for use of the soldiers. About
five hundred gallons of pure milk and
two hundred and fifty gallons of
skimmilk are also being sent to San
Antonio daily. The demand for Fal-
furrias butter exceeds the supply.

Texas. W. D. HORNADAY.

There is plenty of wood in the
eastern and northern states, millions
of cords of it uncut, ready to be
chopped.

"Sorry, but Dan's got my last pair of Lambertville Four Buckle Arctics"

"I may be able to get you some of the other Lambertville Footwear but no more Four Buckle Arctics or Short Boots can be had now. The Government's taking practically the entire output. If you run into an odd pair in any store, buy 'em quick.

"I know it's hard for you fellows who are used to Lambertvilles to wear anything else. But remember it's hard for me too. No others sell so quickly or bring me the same good will. Well, we'll all have to grin and bear it till the Government's demands grow less. Then, believe me, I'll have all the Lambertvilles you want."

If *your* dealer happens to have a pair of Lambertville Four Buckle Arctics or Boots of your size, buy them on sight. If he hasn't, don't blame him. And don't blame us. War orders must come first and for the time being we are powerless to supply our trade.

Your dealer wants to sell these goods just as much as you want to buy them. He knows they mean good business for him and satisfaction for you. He'll have a full line just as soon as we can give them to him and that will be as soon as this big Government demand lets up.

In the meantime make your old Lambertvilles go as far as possible. If you are forced to buy an inferior make, remember that your sacrifice is only temporary, for we promise to put your old reliable Lambertvilles back on the market at the earliest possible opportunity.

LAMBERTVILLE RUBBER COMPANY
Lambertville, New Jersey

An Unusual Opportunity to Buy 100 Head of Guaranteed Healthy, Registered Holsteins of Excellent Breeding and

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Abortion

Last year in the fall with two other men we bought a car of Holstein cows with first calf. After calving we put them to a 14-month-old bull. Three of the cows have come in again a few days before 7 months. The cows seem to be full size and all right. What will make them come in this way?
Clinton, S. C. A. B. B.

The cows probably are affected with the contagious abortion disease, but to determine that you should have a sample of blood from each cow tested at the state experiment station. Keep the affected cows away from heifers and unaffected cows and do not re-breed them sooner than six months from date of aborting. Meanwhile syringe out the vagina of each aborted cow once daily for ten days with lukewarm water containing a teaspoonful of coal tar disinfectant to the quart and repeat the treatment for two or three weeks before service. Also cleanse, disinfect, and whitewash the stable.

Loss of Milk Production

I have a registered Jersey cow seven years old that had a calf in June last year and gave for two months or more over four gallons milk regularly, then reduced a little gradually as her calf got older; this same cow had a calf the 14th of last month and has never given me over five quarts a day; I must add that I stopped milking this cow only about two to three weeks before her last calf and the cow apparently looks in good health and condition and under the same care as last year; what do you attribute the small quantity of milk to?
Delcambe, La. G. P. G.

Milking a cow too close to calving tends to lessen milk secretion after calving. Chill has a like effect, so does lack of nutritious feed during pregnancy so that the cow exhausts her reserves of nutrient material before calving.

Bull Pulled Ring Through Nose

Please advise me if you know of any way to handle a bull after he has pulled the ring through his nose. I have a young bull that is too valuable to kill and he is about the size to begin to be a little vicious.
Greensboro, N. C. J. F. H.

A hanging blinder suspended from the horns over the face and eyes helps in such cases and a couple of long chains attached to the nose band of a strong halter and allowed to trail upon the ground so that they will be stepped upon when the bull starts to run will also lessen danger. We shall be glad to hear from any owner who has successfully dealt with such a case.

Ringworm

How should I handle what they call scab on calves? I lost two calves on that account and came very nearly losing a couple more if I had not tended to them. I used kerosene and lard.
Kenyon, Minn. W. F. K.

Keep the spots saturated with sweet oil or cottonseed oil until it becomes possible to scrub them perfectly free from scabs and crusts, then apply tincture of iodine twice daily until well. Cleanse, disinfect, whitewash the stable and see that it is well lighted and ventilated. The vegetable parasite that causes ringworm grows on damp walls and woodwork as well as the skin.

Progress of Tick Eradication Shown

To show the progress of the tick-eradication work, the United States Department of Agriculture staged an exhibit at the Southern Land Congress held at Savannah, Ga., November 11 and 12. The exhibit showed that 1918 was a record year in freeing southern territory from the tick quarantine, 79,217 square miles being released. A map was included in the exhibit showing the territory originally in quarantine and the territory freed since it was established in 1906. Four field men of the department, who are employed in the tick-eradication work, and a representative from the Bureau of Animal Industry attended the congress.

Hold fast to that which is good. Keep your Liberty Bonds.

HOARD'S DAIRYMAN JUNIORS

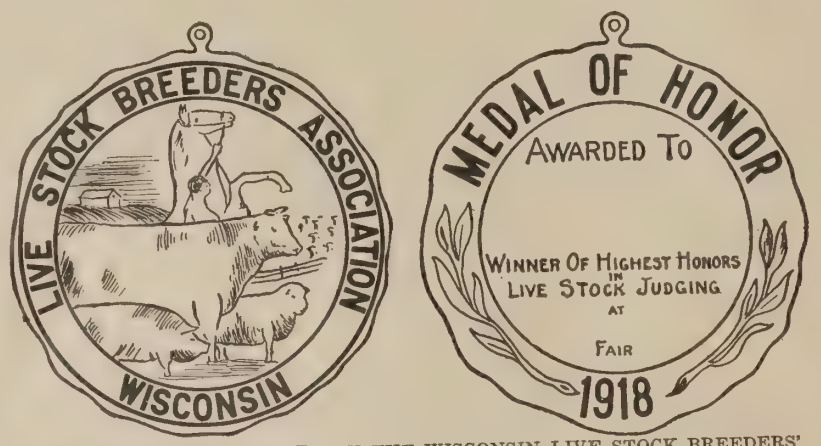
A DEPARTMENT FOR THE DAIRY FARM BOY

One Boy's Experience with Chickens

Henry Huschke of New York, in writing an essay on his farm experiences, has something to say concerning his work with poultry that will interest other boys who are now in the poultry business or are thinking of starting a flock. He says:

"I have had the most fun with hens. Three years ago I bought a rickety incubator. I studied incubators in high school and soon fixed it up to the best of my ability. My mother then gave me 60 eggs and I started it off. It kept a good constant heat and seemed to work to perfection. I tested out ten eggs and when the final time came I had 35 fine chicks. I had my coop already made and by means of a borrowed hover I managed to raise 30 of them. I fed them Cornell rations throughout and in the fall I sold 15 young roasters. This paid my expenses up to that time and I had nine cents over. In the fall I built a coop with old lumber, only buying roofing and windows. By January the pullets started to lay. They layed excellently, probably due to the fact that I did just as Cornell advised. I fed them as they told me, I took care of them likewise, and in building the coop I made it as near as I could to their plans. The next winter I had 35 hens, as many as I had room for. But here ended my chicken career, as I went to high school and could not take care of them as I should. I mixed the feed, cleaned the pen, and kept account of everything but had no time to take care of them and feed them. My brother did this, but after a while got tired of it and wouldn't do it so I sold him my hard work for $50. He has now sold the entire stock of hens and made a handsome little profit, but he would have been better off had he kept them."

"Stockmen are Born and Not Made"



Any veteran stockman will tell you that. He will also tell you that the ranks of the boys and girls contain many a "born stockman", and that they must be found and developed if the success of the future live stock industry is to be assured. He has great confidence in these young people as prospective stockmen.

One of the most important and most essential phases of the work of the Wisconsin Live Stock Breeders' Association is to encourage "stockmanship" among Wisconsin boys and girls, and a new activity along this line has been launched this year. It is the county fair live stock judging contest.

These contests have been open to boys and girls, between the ages of ten and sixteen years, who have never attended an agricultural school. They have been required to judge three classes of live stock on exhibit at the fair—horses, beef or dairy cattle, and sheep or swine. Awards have been made according to the standing of contestants in placing each class and in giving the reasons for these placings. Sixty per cent has been allowed for the placing and forty per cent for the reasons. Thirty minutes are given for placing each class and then each contestant is called before a committee of judges to give his reasons orally. Twenty-five such contests have been held this year.

At each of the fairs the Wisconsin Live Stock Breeders' Association awards a gold medal to the boy showing the highest proficiency in the work. In addition to this prize, the fairs have offered attractive cash premiums, and many of them, through the local breeders' associations, are providing special prizes for proficiency in judging certain breeds of live stock.

A good stockman is, first of all, a good judge. Proper care in feeding is largely wasted upon animals of the wrong type and conformation. Training in live stock judging is, therefore, of the greatest importance. —WISCONSIN LIVE STOCK BREEDERS' ASSOCIATION.

FACES OF MEDAL AWARDED BY THE WISCONSIN LIVE STOCK BREEDERS' ASSOCIATION TO WINNERS IN THE LIVE STOCK JUDGING CONTESTS AT VARIOUS WISCONSIN COUNTY FAIRS THIS FALL

Stock Judging Contests

We are publishing this week an announcement of what the Wisconsin Live Stock Breeders' Association is doing to help Wisconsin junior farmers become better judges of live stock. This association is made up of the leading breeders of live stock in the state,—the men who really know how important the live stock business is to farmers and who should know more about it than any other group of men because they themselves are making it their chief business.

They realize that if any farmer is to be a successful breeder of stock whether dairy cattle or horses, he must be a good live stock judge. A true breeder, you know, is one who starts with the best he can get and by the use of the right sires keeps improving the productiveness and individuality of his herd. He has in his mind a picture of the ideal animal and he is trying to bring his herd up to that ideal. Certainly we cannot expect a man to be a good breeder if he does not know what a good animal is.

Now, you are a junior dairyman. We hope and expect that you will some day have dairy farms and good dairy herds of your own. We want you to be successful dairymen and breeders of dairy cattle, but in order to do that it is absolutely necessary that you learn to be a good judge of cattle. The accompanying article says that, "good stockmen are born, not made," which is perhaps true, but don't you depend on being born a stockman. Take every chance you get to learn more about stock and stock judging.

You don't have to live in Wisconsin to have an opportunity to enter stock judging contests. They are held in almost all sections of this country by breed and dairymen's associations and by the schools.

When men who know the business are willing to spend thousands of dollars on these contests so you can have a better training than they had, it's pretty good proof that they are worth while. Find out when such contests are held in your section and take part in the next one.

A Minnesota Calf Club Winner

Up at Ellendale, Minnesota, there were eleven boys and girls who joined a calf club last spring and all summer they have been working hard to raise their calves as well and as economically as they could. This fall a calf show was held to decide which calf was the best and when they were finally placed, a Holstein bull calf belonging to Vivian Randall, a little ten-year-old girl, was in first place.

Here is Vivian's story of how she accomplished this:

How I Grew My Calf

"King Segis, son of King Segis Pontiac 21st, was born Feb. 19, 1918. At the beginning of the contest he was one month and twelve days old. His weight April 1st was 143 pounds.

"During April he was fed 540 pounds of skimmilk, 20 pounds of ground oats, 3 pounds of oil meal, and 10 pounds of hay. His gain during April was 58 pounds, making his weight May 1st 201 pounds.

'For the month of May I gave him 775 pounds skimmilk, 15.5 pounds ground oats, 15.5 pounds ground corn, 15.5 pounds bran, 4.64 pounds oil meal, and 31 days pasture. For this month his gain was 62 pounds. June first the calf weighed 263 pounds.

"I fed him 750 pounds skimmilk, 17.5 lbs. ground oats, 17.5 lbs. ground corn, 17.5 lbs. bran, 6 lbs. oil meal, and 3 days pasture during June. His gain for this month was 86 lbs.

"The calf weighed 349 lbs. July 1st. He was fed 775 lbs. skimmilk, 37.2 lbs. ground oats, 37.2 lbs. ground corn, 37.2 lbs. bran, 6 lbs. oil meal, and 30 days pasture. For this month his gain was 79 lbs.

"His weight the first of August was 428 lbs. His feed for this month was 775 lb skimmilk, 62 lbs. ground oats, 62 lb bran, 8.2 lbs. oil meal, and 31 da pasture. For this month he gained 8 lbs.

"September 1st he was six month and eleven days old. He weighed 51 pounds, making a gain of 367 poun during the five months."

GLEN WATERSTRIPE OF NEW YORK AND HIS HOLST CALF. GLEN BELIEVES IN GETTING STARTED I THE DAIRY BUSINESS EARLY

Key to Plan View

1—One-Piece Main Frame—Holds all shafts, bearings and gears in proper alignment.

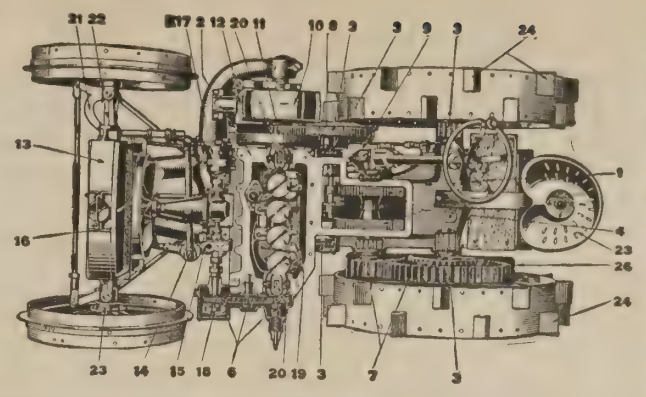
2—Motor Set Crosswise—Eliminates bevel gears, worm friction or chain drive.

3—Hyatt Roller Bearings at all important places.

4.—Cut Steel Gearing in transmission.

5—All Cut Steel Gearing between crank shaft and gear box.

6—All Cut Steel Helical Timing Gears.



7—Forged Cut Steel Master Gear and Bull Pinion with differential (fully enclosed).

8—Oil-Tight Housing for all gears between crank shaft and transmission.

9—Worm and Sector Steering Gear, enclosed.

10—Clutch Pulley on crank shaft.

11—Fly Wheel—Next to main bearing (normal speed 1050 R. P. M.)

Key to Plan View

12—Brake for belt or road work.

13—Cast Frame, 5-piece, Army truck type, non-clogging Radiator.

14—Sylphon Thermostat.

15—Centrifugal Pump.

16—Spiral Gear-Driven Fan; gears enclosed.

17—Dust Proof High Tension Magneto.

18—Speed Governor, enclosed.

19—Pistons—Diameter 3¼ in. Stroke 5 in.

20—Main Crank Bearings, 2⅝ x 4½.

21—Steel Steering Knuckles.

22—Drop Forged Front Axle.

23—Dust Proof Hubs.

24—Detachable Tire Lugs—other styles furnished if ordered.

25—Spring Seat.

26—Dust Proof Housing for final drive.

Study This Chassis
of the Case 10-18 Kerosene Tractor

ABOVE we show a plan view of the Case 10-18, with an explanation of the details. Study this chassis—note its features.

In many ways, you will find the Case 10-18 far in advance of today's usual offerings. For instance, it is the first to offer a one-piece main frame with a four-cylinder motor, mounted cross-wise. This is merely one of the dozens of betterments. The one-piece frame casting constitutes a dust-proof housing for the rear axle, bull pinion shaft, transmission and the bearings for these parts.

This type of construction brings rigidity, reducing vibration, preventing disalignment. Power is conserved, while we multiply strength.

The belt pulley is mounted on engine crank shaft, doing away with bevel gears. It is part of the tractor—not an extra-cost accessory.

The Case Sylphon Thermostat insures complete combustion of gasoline or kerosene, and prevents raw fuel from passing by the pistons and diluting oil in the crank case.

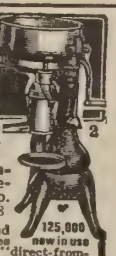
The Radiator has a cast frame. The Core is copper—fin and tube non-clogging type.

A Case air-washer prevents grit or dust from getting into the cylinders.

These are but a few of the greatest advancements in tractor history. Case offers you today, NOW, what others will attempt later on.

The Case 10-18 is rated according to the conservative Case policy.

It develops nearly 14 horsepower on the drawbar and about 24 horsepower on the pulley. Thus we insure abundant reserve power.



Our booklet and specifications point out dozens of other advancements, all of which demand your consideration before you buy.

Write to us today for a copy. Or visit a Case dealer.

Experienced in pure-bred stock, Advanced Registry, modern farming, machinery, orcharding, tree surgery, spraying, etc. Can manage farm economically and produce results. Strictly temperate. References excellent. Address BOX 311, care Hoard's Dairyman.

Oregon Dairy Council

HOARD'S DAIRYMAN:—Founded about three months ago as a temporary organization to help the dairy industry of the state, the Oregon Dairy Council has been so successful and has accomplished such a large amount of good work that it has decided to become permanent.

It is the aim of the council to continue its educational work, telling the consumer the food value of milk and all dairy products, encouraging the farmer and dairyman to retain his herds and helping him solve his feed and labor problems. In all the initial activities of the council along these lines ready response has been noticed. The press of the state has co-operated generously, giving to the dairy industry many thousands of dollars' worth of free space. The farm and trade journals have done their part and public officials and private organizations and individuals have assisted generally.

In all the work the council has sought to be helpful to the dairymen. The finances for the opening campaign were provided by a few generous creamery men who believed the dairy industry—one of Oregon's greatest—should be brought before the public in the right light. Lecturers gave their services and addresses were made before parent-teacher meetings and other gatherings. The school children throughout the state, through the co-operation of the state superintendent of schools, wrote essays on such subjects as "A Live Cow", "A Patriotic Factor", and "A Wise Farmer and His Dairy Cow". Recipes for the use of milk and milk products were published and were tried in the home economics departments of all schools.

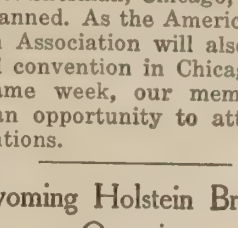
The council in its efforts in behalf of the farmer sent a letter to every draft board in the state asking that the men necessary to the upkeep of farms and dairies be retained in their places by being put in deferred classification. The patriotism of the farmer, working early and late, was commended, but the council asked the draft boards to note that the farmer can not be expected to keep his farm producing food for the home folk and the soldiers if he has no helpers. Much practical good came from this effort. In the matter of feeds the Northwest was greatly hampered because of the great lack of mill products. Influence was brought to bear to get relief here, and here again the council scored success.

And so, with this record of wide publicity and good work well started, the council will go on, hoping to be a true benefit to the farmer and dairyman; hoping to show him wherein he has a chance to get the dollars that should come as his due for his great service to humanity and hoping, also, to so build up the industry that it will become a great economic asset; that herds may be improved and that the entire state, consumers as well as producers, may receive benefits. If the dairymen pull together and the public is fair minded this can be accomplished, the council feels.

Oregon. E. K. HOLMES.

Special Announcement

The seventh annual convention of the International Association of Dairy and Milk Inspectors, which was to have been held in October, has been postponed until December 9th, 10th, and 11th. The convention will be held at Hotel Sherman, Chicago, as originally planned. As the American Public Health Association will also hold its annual convention in Chicago during the same week, our members will have an opportunity to attend both conventions.



Wyoming Holstein Breeders Organize

The Star Valley dairymen of Lincoln County have started into the dairy business in real earnest. They have shown their interest in dairying by recently organizing the first dairy association in the state of Wyoming, the purpose of which is to promote the dairy industry through more systematic breeding, better feeding methods, improvement of shelter conditions, providing a summer range for heifers, co-operative buying and selling, and systematic advertising. The officers of this association, called the Star Valley Holstein-Friesian Association, are S. A. Draney, president; John Heap, 1st vice-president; Carl Erricson, 2nd vice-president; Chas. Wright, secretary-treasurer; and an executive committee consisting of A. Christensen, Thos. Blacker, and T. R. Hebdon.

The Star Valley people are wide awake to the possibilities of dairying. Silos are being built, cow testing associations are being organized, bull associations are being formed, and more and better live stock is being purchased. This is the leading dairy section in Wyoming, having over 5,000 dairy cows at the present time, nearly all being high grade Holsteins.

M. O. MAUGHAN, County Agent.

The ordinary washing of dairy utensils is not sufficient to insure freedom from bacteria. The only safe method of destroying in utensils germs which affect the hygienic and keeping qualities of milk and cream is by sterilization.

Protect Your Milk in Transit

Prevent tampering with your milk by sealing it with the

Dacro Crown.

The DACRO Crown protects your product from all contaminating agencies and guarantees your customers that your milk is as clean, pure and healthful when opened as when it left your dairy.

PEORIA. Dept. F-27 ILLINOIS

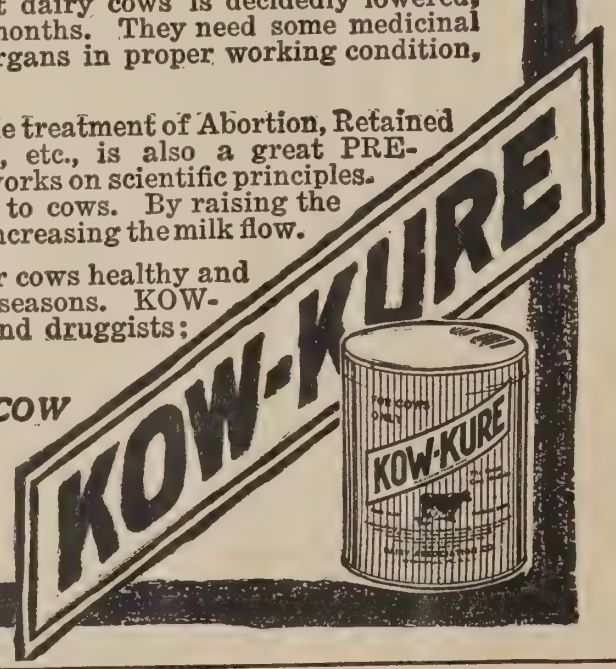
Record Holstein

This four-year-old is first of all healthy. Her record shows it. Her yearly production record is 30,230.2 lbs. milk and 1,111.56 lbs. butterfat. Surprising results are possible if a dairy cow's condition is kept perfect.

Go After Records Yourself

Production records of dairy cows are not just to read about—they are distinctly worth trying for, this year more than ever.

Try it this way: Pick out the cows from your dairy that are not producing as they should. Study their health, and try to improve it by proper treatment. There's real money in working this plan intelligently.



The fact is, the health condition of most dairy cows is decidedly lowered, especially during the winter and spring months. They need some medicinal aid to keep their digestive and genital organs in proper working condition, and to enable them to throw off disease.

KOW-KURE, besides being invaluable in the treatment of Abortion, Retained Afterbirth, Scours, Barrenness, Bunches, etc., is also a great PREVENTIVE of disease—a conditioner that works on scientific principles. It strikes at the seat of ailments peculiar to cows. By raising the health standard, it directly aids nature in increasing the milk flow.

Use KOW-KURE this winter to keep your cows healthy and then compare your milk records with other seasons. KOW-KURE can be bought of feed dealers and druggists; 60c. and $1.20 packages.

After Calving

Every Cow Should be Treated With

Hood Farm Breeding Powder

It cleanses, disinfects, causes the cow to clean quickly and breed readily. It is a safeguard against Abortion, there is less use of the bull, and calves are stronger.

We quote what Mr. H. F. Weaver, of Millard, Wis., says:

"I have used your Breeding Powder for about four years with very good success. I think if every dairyman made a practice of injecting every cow three or four times after calving there would be very few barren cows."

Treatment of all cows with Hood Farm Breeding Powder is the most profitable and economical thing you can do.

Mail an order today, mentioning this paper.

Prices, prepaid, $1.15, $2.75 and $5.00. Flexible Injection Tube, by mail, 90c. Mammoth size Breeding Powder and Tube, prepaid, $5.75.

New York Institute Workers Me

(Continued from page 584)

pected that there will be so great a d mand for cattle as some predict. Th I understand to be Dr. Warren's ide and it seems to me correct. I kno that some at the college, as elsewher do not agree to all of this.

Mating Swine

HOARD'S DAIRYMAN:—Novemb and December are the princi months in which sows mate. A Nove ber mating means a March litter a a December mating means an Ap litter. March is a good month for t pigs to come if proper preparatio are made to take care of them. P tection from the cold and dampne is the chief requirement. In sectio where the weather is cold until w along in the spring, April is a bet month than March for young pigs arrive and in case of the young s with her first litter I would rath have her farrow in May than in eit of the other months mentioned. T very pleasant weather of May and t green grass obtainable are all fav able to the young sow and this par ular May litter will come forward fast if not faster than if they w farrowed early in the spring wh weather conditions were not so m in their favor.

The average period of gestation the brood sow is 114 days. It ran from 112 to 116 days according to individuality and condition of the s Young sows in good breeding c dition do not usually go more than days, while old sows often to 116 days from the time of be served to farrowing. An old say which has been handed down is v near the mark, "three months, th weeks, and three days". It is easily remembered. It is better t the sow or sows be pure-bred, but h grades mated with a pure-bred will bring good pigs for meat p poses.

The period of oestrum in the br sow lasts about three days and if then served she will again show h in three weeks. If the sow is not with the sire during the first h period she should be watched th weeks later and if she is to be bre this time and is to be taken awa some good sire a suitable crate the purpose should be in readiness is not always well to take the so the boar on the first day of the h period. In doing so and taking sow away immediately after b served, as she should be, she may prove with pig. It is better to wa day and present the sow to the n on the second or third day, but a only one service and take the away. One service is better than or more. The pigs will be stro and the chances of insured se are just as good if not better tha the sow were allowed to remain the boar over night or for two d Three weeks after service the should be sharply watched to se she comes in heat again. If she she must of course be presented to sire. After the sow has been se she should be shut up in a pen a from other hogs for a couple of and fed sparingly. Sometimes the is tardy in showing an inclination the male. In a case of this kin heat making food such as corn sh be withheld from her and oat largely fed. A thick mush mad crushed oats and whole milk or s skimmilk makes the best feed th know of to bring sows into he always mark down the date which a sow is bred, then I when to look for the pigs to a and can be prepared to take good of them.

The Future of the Creamery

There are discouraging periods in the life of any business. Such periods seemingly come at frequent intervals in the creamery business. With some creameries the condition seems to be chronic, while to some well managed, properly located plants it seldom applies. About a year ago the outlook for many creameries was not particularly bright. War conditions had created an inflated demand for condensed milk and plants to manufacture that product at practically every point where sufficient milk was available to warrant the operation of a condensery. Many creameries were seriously considering the closing of their doors without a struggle. In addition to the problem of condensery competition nature nearly dealt the creamery industry a knockout blow in many sections by sending early frosts, thereby preventing the maturing of corn and making it necessary for many farmers to sell their cows. On top of all, the coal situation was bad and transportation was the poorest known in modern times.

Conditions, although bad, were not hopeless. The scarcity of coal crippled the condenseries and to add to their misfortune there were insufficient ships to carry their product to Europe. Instead of having an unlimited market and boundless space for expansion, as they had supposed, their market was restricted and expansion was impossible. Farmers, who had been among the first to leave their creameries to patronize the condensery, began again to send their milk and cream to the creamery. Transportation soon became better, enough coal was found to tide the creamery through the crisis, and conditions in general became fairly satisfactory. While the war lasts there will continue to be many problems that will have to be solved but as in all things persistence will find solutions for all such problems.

At present the future of the creamery industry looks bright indeed. There is an unlimited demand for butter and that demand will be intensified with the end of the war, which we hope is not far off. There will be greater home consumption but in addition the demand from across the ocean for high quality butter will be unlimited. It will, of necessity, take some time for those countries which have suffered so intensely because of the war to replace the live stock which has had to be sacrificed. This country will, even more than now, be looked to as the source of supply and our creameries should start at once to prepare for the demand that will come to them. Quality should be the watchword in making preparations for the after-war trade. Start to-day to prepare.—W. B. LIVERANCE, NEW YORK.

Sir Inka Prilly Segis Albino

Born Dec. 3rd, 1917.

A Real Bull For Some Small Breeder.

IF YOU ARE A SMALL BREEDER or beginner in the Holstein business and in the market for a herd sire, here is one that is worthy of your best consideration.

JUST A YEAR OLD—Ready for service. He is well grown, a splendid individual with faultless topline and marked nearly all white. As an individual he will suit the most particular.

SIR INKA PRILLY SEGIS, his sire, is one of the famous sons of the great King Segis, who has proved himself to be one of the greatest, if not the greatest, transmitting sires of the breed.

THE DAM OF SIR INKA PRILLY SEGIS is Inka Prilly with a record of 30 lbs. in 7 days. She is from a 25-lb. daughter of old Prilly and sired by a grandson of this same famous foundation cow.

THE DAM OF SIR INKA PRILLY SEGIS ALBINO is Princess Douglas Urmagel, a 24-lb. four-year-old daughter of Sir Urmagel Burke, a full brother to the 35-lb. cow, Urma Burke, and from the 31-lb. cow, Urmagelsche 2d A.

PRINCESS DOUGLAS URMAGEL is from a 29-lb. four-year-old daughter of DeKol Beets Segis, another well known son of King Segis.

THE THREE NEAREST DAMS of this young bull average over 28 lbs. Two of them being only four-year-olds. His seven nearest dams average 26.93 and his eighteen nearest dams average 26.77.

HE CARRIES THE SAME RELATIONSHIP TO King Segis as Segis Fayne Johanna, the only 50-lb. cow, Fancher Farm Maxie, the world's champion heifer with 47 lbs., and Mabel Segis Korndyke, former champion four-year-old with 40.32 lbs.

HE CARRIES A DOUBLE CROSS of both King Segis and the famous foundation cow, Prilly,—both animals familiar to breeders from coast to coast.

AND WE ARE OFFERING this young bull to you for $650, guaranteed sound in every respect and tuberculin tested by Federal veterinarians.

IF YOU WANT HIM, do not wait to write but send us a wire instructing us to hold for you.

The E. C. Schroeder Farms, Moorhead, Minn.

The Winship Farm Bulls

Are From Persistent Milking Dams

The 18 cows milking in my herd during April averaged 960 lbs. milk per day and 52 lbs. butterfat, each, for the month. This included heifers milking since last September, October and November. These dams represent the best blood lines of the Creamelle, Johanna, Beets, and Ormsby families.

Sired by Aaggie Burke Cornucopia De Kol

A 29-lb. bull, who traces back directly to the two greatest foundation cows of the breed, Spring Brook Burke and Aaggie Cornucopia Pauline. He is also closely related to the two champion 31,000-lb. milk cows.

If You Want Milky Bulls

Write at once

Winship Stock Farm, Owatonna, Minn.

A Grandson of

Sir Pietertje Ormsby Mercedes

FOR SALE

He is dark in color like his famous Grandsire. A choice individual. 2 years old. Dam, an A. R. O. daughter of a bull who was *Grand Champion* of a *National Dairy Show.* A rare bargain. **V. S. Culver, Stillwater, Minn.**

GRANDSONS OF KING SEGIS

Grahamholm Farm has a choice lot all ages up to 10 months. Sired by Sir Winana Beets Segis. He has a 35-lb. daughter, a 30-lb. daughter, and a good number of other great producers.

We also have sons of Dutchland Creamelle Colantha Lad, one of the best bred bulls for yearly production.

Every cow in the herd has an A. R. O. butter record. Come or state your wants. Address **W. J. BOYNTON, Mgr., Rochester, Minn.**

Buy Them Young

Buy your herd sire young and save money. You can raise it as cheaply as we can.

We are offering for sale some excellent young sons of Buffalo Skylark Ames, a champion at two National Dairy Shows with a fine list of A. R. O. daughters, and out of A. R. O. dams. Write for full information.

E. H. Kuchenbecker, R. 1, Owatonna, Minn.

How About a Herd Sire?

MUTUAL FOBES LONGFIELD DEKOL 82959
A Splendid Son of His For Sale.

The Calf—M. M. Tritomia Fobes Longfield was born Feb. 2, 1918. He is nearly white, as straight as a line, and very well grown.

His Sire—Mutual Fobes Longfield DeKol already has 22 A. R. O. daughters and a large number of younger ones coming on that will be retained in our herd. His sire is one of the good sons of Mooie Mutual DeKol and his dam, a daughter of Homestead Jr. DeKol, made 30.04 lbs. butter, 630.80 lbs. milk in 7 days as a jr. 3-yr.-old; 124.42 lbs. butter and 2,651.60 lbs. milk in 30 days. (World's record when made).

The Dam, Milford Tritomia Fobes Homestead, a daughter of Canary Fobes Bessie Homestead, made 17.35 lbs. butter, 358.2 lbs. milk as a jr. 3-yr.-old; the second dam 17.38 lbs. butter, 408.3 lbs. milk; third dam 22.19 lbs. butter, 488.40 lbs. milk.

This is an excellent combination of breeding, the sire of this youngster and his dam's sire both being from daughters of Homestead Jr. DeKol, both with records above 30 lbs. butter and 600 lbs. milk.

The calf is priced within reach of any small breeder. Write us today for complete information about him.

Beet Tops Used for Ensilage

An additional value of $35 an acre has resulted from ensiling sugar-beet tops in Ventura County, Cal. Formerly the tops were sold in the field to cattle and sheep owners at about $2 an acre. The new utilization means a great saving in feed. The farm bureau in Ventura County is carrying on a silo campaign, and plans have been laid for the construction of a number of beet silos this year.—U. S. War Work Weekly.

HOLSTEINS

For Two Thousand Years

the people of Holland have been developing the Holstein-Friesian breed of dairy cattle. They have developeda breed that most economically turns large amounts of coarse fodder into valuable dairy products, and is valuable for beef purposes. Holstein-Friesian cows exceed all others in milk and butter production and return a greater profit upon the cost of their feed.

Pabst Bargains

No. 1—A 32.02-lb. grandson of King Pontiac Champion and Johanna McKinley Segis. This calf's sire is a 38.03-lb. bull that sold for $12,500 and his dam is a most promising young cow, having a Jr. 4-yr.-old record of 32.02 lbs. butter in 7 days.

No. 2—His sire is by King Pontiac Champion and out of Hengerveld Colanthus, the cow that sold for $3,500 at the last National Holstein Sale, and his dam is a 26.07-lb. cow having three very creditable A. R. O. daughters.

Here is a splendid opportunity to line up with the blood of King Pontiac Champion. Write for further particulars.

A Rare Chance

To secure a few choice

Grade Holstein Cows

Just fresh and due within a few weeks. These cows were selected to furnish milk for a famous summer hotel which is soon to be turned into a Government Hospital. They are a very fine lot and will be sold in numbers to suit the buyer. There are only a few of this kind in New York State. Wire your arrival. Don't wait to correspond.

River Meadow Farms, Portlandville, N. Y.

$200.00

Buys a Grandson of King Korndyke Sadie Vale

King Sadie Korndyke Fayne No. 241601, born Dec. 18, 1917. A large well grown fellow, fine individual, in color largely white.

Sire:—King Korndyke Sadie Vale 18th, one of the best sons of King Korndyke Sadie Vale from a 31-lb. 4-yr.-old daughter of the great Sir Veeman Hengerveld.

Dam:—Crescent Cora Fayne. A. R. O. record as a senior 3-yr-old: Butter 22.07, milk 488.60; butter 30 days 86.18, milk 30 days 1,876.50. She is in my herd at present and a promising candidate for a large record in the future. PLEASANT HILL HERD, W. D. ROBENS, - POLAND, N. Y.

Holstein Heifers

325 High grade heifers 1½ to 2½ years old, bred to freshen this fall and early winter, large, well marked, fine condition.

50 Registered yearling heifers, beautifully marked, very well bred, good size, nice condition, extra fine lot.

35 Registered heifers, bred to freshen early this fall, practically all springing now, fine individuals, bred to good bulls.

Positively the best lot of registered and high grade heifers ever offered for sale in New York State. Buy now before the price advances.

J. A. Leach, 203-205 Savings Bank Bldg., Cortland, N. Y.

Soon Ready for Service

Young Holstein bulls from good Official Record dams and sired by SPRING FARM KING PONTIAC 6TH. Fourteen of his first sixteen two-year-old daughters last winter each made better than 20 lbs. of butter in seven days; a showing never before equaled by the first two-year-old daughters of any other sire. These young bulls are nice straight, thrifty, desirable animals. We would be glad to write you full particulars. You will be surprised that our prices are so low for so much quality.

Henry Stevens and Son, - Lacona, N. Y.

Elliott Brothers Dispersion Sale

WATERLOO, IOWA, DECEMBER 6th, 1918

We Will Sell, Without Reserve, Our Entire Herd of 65 Registered A. R. O. Holsteins.
Eight Cows With Records from 30 to 32 lbs. Butter in Seven Days.
A Dozen Sons and Daughters of Cows With Records from 30 to 35.24 Pounds.

AALTJE WAYNE DEKOL 3RD, WEIGHT 1,950 LBS.
A. R. O. 31.97 LBS. BUTTER, 560 LBS. MILK 7 DAYS

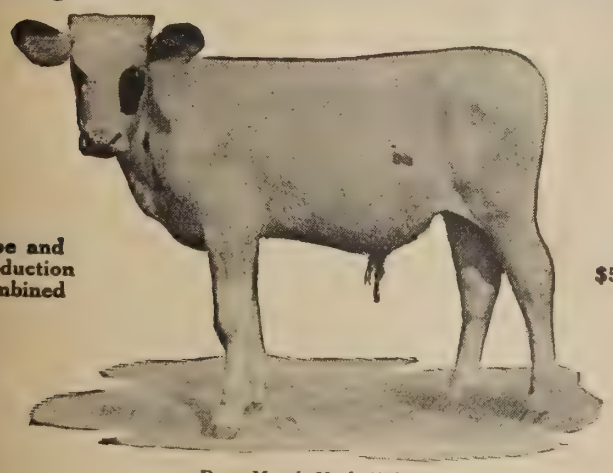
This cow, her two daughters, one with 31.6 lbs. and one 23 lbs. at 26 mos., her full sister, a 30-lb. half sister and a 5-yr.-old son will be sold. Over half the offering are 50% same blood as this cow. Her sire has 13 A. R. O. daughters, 4 above 30 lbs.

A 32-lb. cow and her two daughters, one with 31.6 lbs. at 7 yrs., the other 22.98 lbs. 7 days at 26 mos. A 5-yr.-old, 30-lb. cow with 25-lb. 2-yr.-old daughter.

(1) Nearly half the offering consists of sons and daughters of, and cows in calf to, KING PIETERTJE ORMSBY PIEBE, THE GREATEST YEARLY RECORD SIRE IN THE WORLD. His dam and sire's dam average 1,312.39 lbs. butter and 29,641 lbs. milk 365 days. This makes him the highest record bull of any breed. Dams of these calves have records up to and over 31 lbs. butter A. R. O. Several fine herd bull prospects.

(2) 16 choice daughters of SIR GERBEN PAULINE, a 33.8-lb. bull. The first two daughters sired by him and the only ones that have yet freshened in mature form, have recently completed A. R. O. records of 34.8 lbs. and 30.54 lbs. butter 7 days at 5 yrs. of age. Several daughters in the sale that we consider still better.

(3) ORMSBY KORNDYKE LAD 7TH, the 3-yr.-old herd sire and a bull of remarkable breeding both for 7-day and 365-day records. His dam, 35.24 lbs. butter and 750 lbs. milk 7 days. His sire, Ormsby Korndyke Lad, is making a reputation second to no bull in the East with daughters producing above 30 lbs. at 3 and 4 yrs. and making world records in the 365-day and 8 months after calving divisions.



(4) A breeder's sale as everything except the bull and four foundation cows were born on the farm.

(5) Tuberculin tested and sold with a 60-day guarantee. Sale at Dairy Cattle Congress Grounds 10 A. M.

S. T. Wood in the box.

HOARD'S DAIRYMAN

A WEEKLY JOURNAL DEVOTED TO DAIRY FARMING

Volume LVI — FORT ATKINSON, WIS., NOVEMBER 29, 1918. — Number 19

California Dairy Adjustments

R. L. ADAMS, California College of Agriculture

[E dairyman is "up against it", is "afraid he will be up against it", "he isn't worried". The point of v depends upon operating condi-is. The man who is finding him-distinctly "up against the real g" is the typical commercial yman who, for the sake of a short l, is operating close to his market, consequently under conditions of l purchased at pre-ing high prices, of or hired in competi-with nearby indus-l activities, and elevated land val-

he man who fears l sledding is either ing his feed or is g his labor at wa-far in advance of t he formerly had ay. The man who nothing to worry it is the operator heap feed, with all most of his labor lied by his imme-e family.

here has been a l deal of talk about ming milk famine alifornia. One club an told me that years from now won't be enough produced to feed abies. Older chil-and grown-ups have to go with-So many un-able rumors and I guesses have going the rounds I took occasion to into the principal cts supplying the big cities of San isco and Los An-

a result of observations cover-istricts possessing 23,000 cows in providing market milk for cities, I am conservative in stat-at no wide-spread milk famine minent—nor, in fact, do I look ny serious curtailment in pro-n. It is certain that some s are bound to go out of busi-but these will be offset to a extent by two regulating condi-The first is the ability of many e dairy farmers to reorganize business in a way to make it productive; the second is the ility of drawing upon more re-districts which now produce but-, casein, and cheese.

Feed and Labor Price Advance

That advancing prices for feed and labor can cut down and in many cases wipe out the entire profit may be easily comprehended from the fact that for comparable periods of 1916, 1917, and 1918, prices for such concentrated feeds as cocoanut oil meal, dried beet pulp, rolled barley, alfalfa meal, and patent feeds, have advanced from an average of $21 for 1916, to $30 for 1917, and with another advance to $35 in 1918. Alfalfa hay—the mainstay of the dairyman—has risen in price from $12.46 in 1916, to $17.78 in 1917, and to $21.35 in 1918. Beans and middlings, on the other hand, dropped from an average of $42.50 in 1917 to $36 in 1918, due to the action of the Food Administration authorities, but as there is mighty little to be had the reduction hasn't proved to be much of a benefit.

Labor prices are reflected in the records of orders placed with the employment agencies. In San Francisco the average wage offered for milkers in 1917 was $45, while thus far for 1918 it is $60. The majority of 1917 orders called for men at from $35 to $55; in 1918 not a single order was placed under $40 and the range was from $60 to $75 inclusive.

Dilemma of Farmer Near the City

To illustrate how a man's opinion is determined by his point of view, here is an interview with a dairyman who operates under conditions of buying all his feed and hiring his labor in competition with nearby shipyards. He is located on land of high value because of its residential possibilities. I found him in a very pessimistic mood concerning the dairy business. To quote him:

"Where formerly I paid $70 to milkers and they would board themselves, I have just hired two men at $80 and $85 and I have to board them. The feed situation is the worst. I should say that compared with former conditions we are not getting more than 50% of as much or as good stuff. Within the last year my dairy has been cut down from 90 to 60 head.

"You can't blame men for trying to get all they can. Men do not like the dairy business. They want to work certain hours during the day and not have broken time, that is, the early morning and late afternoon work. We can meet the situation if we have feed prices, or if the price of our output is increased to meet the cost of production.

"I think the labor situation could probably be handled if a reciprocal arrangement were made with the counties of which our milkers are citizens so that they had to understand they would have to milk or fight—either here or elsewhere. Men sit around the card tables and won't leave them no matter how pressing the labor needs are.

"There are three elements in the dairy situation: feed prices, market prices, labor prices."

Since Jan. 1st of this year several herds have already gone to the butcher from this section, because their owners became weary of labor troubles and fighting the high cost of production. One man sold 120 cows from his Newark dairy to the butcher because his milkers left him without notice. A Centerville dairyman has disposed of his entire herd of 170 to be slaughtered. A Gilroy man has recently sold a herd of 70 because of dissatisfaction with the outlook of cheese. A Watsonville man is now offering his herd of 85 grade Holsteins because of feed prices.

Available Roughage Spells Profit

In contrast, however, consider Marin County, where much of San Francisco's milk is produced by cows pastured on rolling hills, with addition of alfalfa hay and some concentrates. Only the other day a large land owner who farms out 3,000 cows on a cash basis raised his tenant $1.00 per cow per year, a flat increase of 6 per cent. And he didn't have a single complaint! In telling of it, he added: "I might just as well have made it a dollar and a half—they'd have stood for it, they're making a barrel of money." In this same section a small group of responsible men, impressed with the benefits of co-operation, sent out an S. O. S. call to 700 dairymen for a meeting to discuss ways and means of bettering the dairyman's lot. Less than 2% responded to the call, and this handful showed very little interest.

I have hinted that some dairymen are liable to go under unless a re-

(Continued on page 638)

PAINTING SHOWN AT NATIONAL DAIRY SHOW BY KENTUCKY COLLEGE OF AGRICULTURE

This farm contained 225 acres with 30 acres devoted to corn for grain, 10 acres corn for silo, 7 acres corn for hogging down, 40 acres for wheat, 40 acres clover and mixed hay, 10 acres alfalfa hay, 30 acres rotation pasture, 45 acres permanent pasture, and 2 acres for garden and orchard. In addition to the figures shown in the illustration it is stated that the labor is performed by the owner, his son, one man hired by the year, and some day labor hired during the harvesting of crops. The barn is 36'x120' and the silo 14'x32'.

Correspondents must not expect us to acknowledge the receipt of letters containing remittance for subscription. The receipt of the Dairyman is sufficient notification that money has been received. The label on the paper will show date to which subscription is paid. In case of renewals, if date on label is not changed within two weeks after remittance is sent, inform us at once.

We solicit advertisements of meritorious articles needed by the farmer. We try to keep our advertising columns clean and wholesome, that they may merit the patronage and confidence of our readers. Unwholesome immoral and quack advertising are excluded. A sincere effort is made to exclude frauds, irresponsible and unscrupulous firms. We will always take it as a favor to be notified whenever any advertiser's dealings with a subscriber are in bad faith or evidence a lack of business honor. Advertisers generally recognize the readers of Hoard's Dairyman as an up-to-date class of farmers, who farm with business-like methods, and we hold our columns for the patronage of only those with whom our readers can deal with profit and satisfaction.

ADVERTISING COPY must be received eight days previous to the date of publication. Advertising to be classified or changes in advertising must reach us twelve days previous to date of publication.

Entered at Fort Atkinson, Wis., as second class matter.

Warns Against Exposing Seed Corn to Fall Rains

"Favorable weather has been the friend of the careless farmer whose seed corn has been hanging on the south side of the barn or windmill," says H. W. Albertz, agronomist, after a field trip to many of the corn fields of Wisconsin. Owing to continued dry weather the corn cured well and there will be no trouble with germination if the corn is taken inside before the fall rains begin. This method of curing seed corn is not recommended, however, because we have a continued dry spell in the fall only about one year in ten.

"The usual reason for attempting outdoor curing is that, just after picking, the corn cures faster in the open air. Later in the season, when the corn should be removed, the farmer is busy with plowing, and when the fall rains come he feels that the corn should still remain in the open air to dry. Fall rains lower the germination of the corn very rapidly. The wet corn dries slowly or not at all during the cool days.

"Several excellent schemes have been devised by Wisconsin farmers for drying corn indoors. One Kenosha County farmer had each ear of corn hung separately in his shed, and because there seemed too little ventilation in the room, he installed at the end of the shed a fan operated by gasoline power.

"At least two years' supply of seed is being saved on most Wisconsin farms, but unless care is taken now in curing the seed, last year's experience with poor germination will be repeated. The corn is in splendid condition now, and the only way to be sure that it will germinate well next spring is to cure it right in the fall."—Wisconsin College of Agriculture.

THE DAIRY OPTIMIST

W. LIVINGSTON LARNED

Billy and the Moo-Moo

Time on time, I've found them, yonder,
In the barn or in the field,
Each one sort of growin' fonder
Of the other's love revealed.
In the cow's big eyes, a glimmer
That if set to words, might say:—
"Little chum of summer flowers,
Part of sunshine and of showers,
Youth is happy all the day!"

Just a kid, in jumpers, strolling
Through the farm's uncensored wealth.
Over realms of clover rolling,
With a heritage of health.
Then he spies a Holstein, grazing,
Underneath the apple trees,
And it's: "Moo-Moo, here's some grasses,"
While the drowsy hour passes,
These two, chumming, if you please.

When it's winter—winds a-blowing,
And the barn is snug and dry,
You will see a wee kid going
To his "pardner", by and by.
He will talk and sing and murmur
All the gossip of the farm,
While a Holstein, patient, mooing,
Seems to know that something's brewing;
Holds her fair head near his arm.

I am forced to wonder—maybe,
Cows and children have a way
For to talk—a Holstein-baby
Language that is theirs to say.
She will stop and look and listen,
He will tell her fairy tales,
Then she'll nod, and start to mooing
Watches all the stunts he's doing,
In amongst th' dairy pails.

"The trouble with Old Stingyman was, that he fed his cattle th' way he did his summer boarders—no wonder they fell behind."

Philosophy of the Oldest Dairyman

"If a stranger wants to pet th' cows and loves to be around 'em, and thinks they're mighty purty, then I'll trust that chap with all I've got."

"There are four sides to anything that's on the square. In th' dairy business it's milk, cream, butter, and cheese."

The Other Way About

"I see you are keeping a cow."

"Wrong, neighbor, wrong, she's keepin' me."

"I'm not one fer revenge," said Uncle Hiram Rhubarb, of Cloverdale Dairy, "but I hope that every German who cut down a tree in France will pass that way on a sweltering hot July afternoon, while he's lookin' fer shade."

Lightning, they say, never strikes twice in the same place. I reckon that's principally because, after it's struck, there ain't no same place left.

When Peace Comes

It may be so—I somehow feel
That when spring comes, with bloom and bud,
War shall have ceased to bare its steel,
Red poppies spring from Flanders' blood.
And I will like it very much—
The sense of relaxation sweet;
God's smile, soft as the springtime's touch
And violets swaying at my feet.

There never was a war so just:
So surely sacred in its creed,
And yet, man hastens back to dust
So soon, each hour of life we need.
We want the full span of the years
To glory in His fine, clean way
To know His sunshine, not our tears,
To live the fullness of His day.

For peace will bring my boy again,
And I will see him, rugged, brown,
A brave man, born of bitter pain,
Come marching back once more to town.
And we will watch the spring-time herd,
Go slowly to its clovered de'l,
Whilst apple blossoms, and a bird
Sing forth the tidings: "All is well!"

Advantage in buying a

DE LAVAL

NOW

Butter-fat is now worth twice as much as it was two or three years ago.

So is labor.

A De Laval saves both.

And never before was there so urgent reason for saving every ounce of butter-fat and every half-hour of time and labor.

A De Laval will now pay for itself in half the time, compared with former years.

Buy it now and it will save its cost in a few months.

See the nearest De Laval agent right away and le him show you what th De Laval will save fo you. If you do not kno the De Laval agent, writ direct for any desired in formation.

50,000 BRANCHES AND LOCAL AGENCIES THE WORLD OVER

Dairy Calf Club Movement

C. R. GEORGE, INDIANA

The dairying of future years will depend quite largely upon one essential consideration if the industry measure up to the constructive ght of our present day leaders in dairy world. First of all there be developed a generation of dairy farmers—super breeders super feeders—who can in turn the cattle from our present day s and develop more perfect ani- with still greater efficiency. it is that the betterment of our cows is an important factor in improvement and true it is that sire is half the herd" and ought e given high rank as influencing future of dairying.

it, may I ask, what would be of all these herds and their if we do not at the same time lop future herdsmen and breedo carry on the constructive lines reeding that are represented in ent day herds? Just think of this a moment and you will recall y instances where breeders have loped great herds only to have degenerate in the hands of a essor. Too often this has been of fathers and sons, especially e the boys have not had a real est in the affairs of the farm at age when their minds were deing and their ideals were being ied. In many instances the boys , however, been given a real ce. Their desire for ownership fulfilled in a calf or a cow of own which they paid for from savings or by their work; their t of competition and adventure realized when their own heifer pleted a year's record with 50 of butterfat more than the fae from their father's herd or they were given an opportunity how their good young things at county fair; and a desire to do er was created when at this same a neighbor farmer, or possibly oy, brought out a calf that stood d when the ribbons were tied by judge. Boys of this kind can y start where their fathers left nd continue the gradual improvet in the herds under their charge.

Developing Boys and Girls

early then the problem before dairy industry is a human prob- The dairymen and breeders of y are already made. Many good have been lost to the industry ugh lack of encouragement and rtunity and those that we have deviate but little from the methand practices which their early ing has dictated, be it good or . But those of the future are boys and girls today. They are in schools and on the farms and for the most part their dairy possibilities lie dormant. Little has been done to awaken their interest and cultivate their natural desires. Too often they are pouring over books of history and language that not only mean little to them but also tend to deaden their interest in all school work.

At just this stage in our dairy development the "Calf Club Movement" was started. It came to fill a real need and so well has this been done that it has come to stay. At first it was abused by those who mistook its real purpose. They tried it as a means of developing dairying in a new country after much the same fashion as land agents use newspapers and excursion trains to put across their deals. They forgot the boy and girl in their effort to get milk. They encouraged club members to buy calves, and then to sell them after a short period of ownership—a practice which brands one as a "cow dealer" rather than a breeder. Needless to say their method was a failure. But out of it grew a plan that is fundamentally right and is accomplishing real results. This plan called for a club that would continue over a period of from three to five years. The membership of the club was to buy calves, not to sell but to keep and to breed.

The basic idea of this new club was to develop boys and girls. Incidentally it brought good stock into the community, it demonstrated the results of good care and feeding, it interested the community in the keeping of records and the use of better sires and through these things it quickened a greater community interest in the dairy cow. But lest we forget, we repeat this was only incidental and decidedly subsidiary to the real purpose of the club.

THE FIVE BEST INDIVIDUALS

After the judging was over, the five best individuals posed for a picture. Robert and Carl Nelson (left) won 1st prize on individuality with their heifer, Imp. Boones Daisy. Miss Arena Van Huss stood fifth with her heifer but won first prize in the contest because of her good records and the excellent story of her work.

THE CALF THAT FATHER REJECTED

Lois Crane with her Imp. Boones White Rose of Crane Farm stood third on individuality. This heifer was rejected by the boy who drew her on the day of distribution because his father "would not give 50 cents for such a poor, skinny calf". The calf gained 183 lbs. in 115 days under the care of this little girl.

ARENA VAN HUSS AND HER PRIZE WINNING ERNSEY HEIFER. IMP. BOONES BLANCHLAND AISY, AT THE BOONE COUNTY CALF CLUB SHOW

The Indiana Plan

With these basic principles constantly in mind, a type of calf club has been developed in Indiana that is giving excellent results. The clubs are organized for a period of three years and during that time the members are continually competing for honors in three separate and distinct yearly contests. One contest covers the calf year and aims to teach and demonstrate the principles of good feeding and management of calves. The members keep a record of their rations and feed consumed as well as the growth and development of the calves. At the end of the year they write a story of their work and show their calf at the annual calf club show. Their standing in the contest is decided on the basis of the following scale of points:

Basis of Awards for First Year Contest

Individuality and condition of animal	40%
Methods of feeding; rations selected, amounts fed, and growth made	30%
Records and written story of the feeding, care, management, and cost of raising the calf	30%

The next contest covers the heifer year and involves in addition to good feeding and management the big problem of breeding the heifer to a worthy bull. At the close of this contest another club show is held and the following points are considered in judging the contest:

Basis of Awards for Second Year Contest

Individuality and condition of animal	40%
Methods of feeding; rations selected, amounts fed and growth made	20%
Individuality and breeding of bull to which the calf was bred	20%
Records and written story of the feeding, care, management, and cost of raising the heifer	20%

The third contest continues through the first lactation period and involves the keeping of feed and production records. When it starts the real show is on. Here it is that the boy whose heifer stood low on individuality gets an opportunity to prove his worth and here it is that the boy who ranked high in previous contests must do some skillful feeding to uphold his rank. And so they vie with each other throughout the year. As in a horse race, they forge ahead, fall behind, quicken their speed, sometimes they "break" and then "come back," and finally some one wins the race.

At the close of this contest the awards are made on the following basis:

Basis of Awards for Third Year Contest

Individuality and condition of animal	20%
Methods of feeding; rations selected, amounts fed, and growth made	25%
Production of milk and butterfat	30%
Records and written story of the feeding and care of the cow and the cost of producing milk	25%

How Club is Financed and Managed

A number of calf clubs organized on this basis are in successful operation in different parts of Indiana. All are financed by local bankers who put up the money for buying the calves and loan it to the members for one year with the privilege of renewing the notes for two additional years if necessary. Each club has a local leader or supervisor. He may be a county agent, a high school teacher, or other interested person but he acts as an advisor to the members and a leader in their organization. He is a very important and essential part of a successful calf club. To him the members make their monthly report and through him the club is connected with the boys' and girls' club movement in the state.

At the close of each year's contest a number of premiums are usually secured from local business interests. Whenever possible these are given as trips to the Purdue Short Course or State Dairy Association meeting so that the real purpose of the club—the development of boys and girls—may be more completely accomplished. Whenever money premiums are given it is best to specify that it is to be used to apply on the member's note at the bank.

Boone County Guernsey Club

The Boone County Guernsey Calf Club at Lebanon, Indiana, is a good example of what can be accomplished through a good, live calf club. This club is made up of twenty-seven boys and girls who secured as many purebred Guernsey calves that were imported from the Island of Guernsey last spring by Mr. C. L. Hill of Wisconsin. They were brought over especially for the boys and girls of this club. Mr. James P. Staley of the Farmers' State Bank agreed that their bank would finance the project. The membership was made up and a permanent club organization was formed before the calves arrived. Mr. Karl Snepp was chosen for president and Miss Arena Van Huss for secretary of the organization which will have meetings from time to time durthe winter months to discuss and study dairy problems and learn more about the Guernsey breed. The

Fitting Legumes into a Systematic Rotation

D. H. OTIS, Wisconsin College of Agriculture

THE most important legumes for the dairy farm are undoubtedly clover and alfalfa. We grow these legumes for two purposes, namely, for feed and for the fertilizing constituents. For feeding purposes we look upon the legumes as being the leading source of protein. The value of these two crops for their protein content in comparison with other roughage is shown as follows:

Feed	Yield per acre Tons	Digestible protein per ton Lbs.	Digestible protein per acre Lbs.
Timothy	1.5	56	84
Mixed hay	1.5	118	177
Corn silage	10.0	18	180
Red Clover	2.0	136	272
Alfalfa	4.0	220	880

From this table it will be noticed that red clover yields 136 lbs. digestible protein per ton, or nearly 2½ times as much as timothy. It yields over 50% more digestible protein than mixed hay. It is a better yielder than these hays, and consequently produces on an average 272 lbs. more

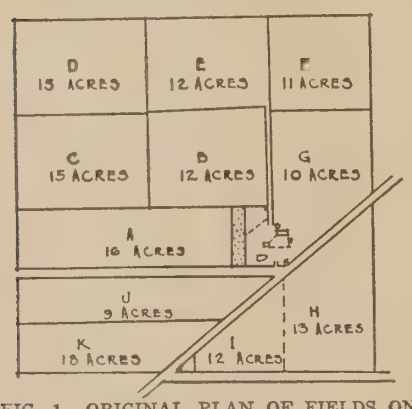

FIG. 1. ORIGINAL PLAN OF FIELDS ON FARM A

This farm consists of 160 acres, has 140 acres available for crops, and has no permanent pasture. The soil type is clay loam, and the topography is rolling.

digestible protein per acre than timothy, and 95 lbs. per acre more than mixed hay.

Clover has been recognized as an important factor in the cropping systems of our farms for a long period of time. It has a place on practically every Wisconsin farm, and any system that looks toward supplying the dairy farm with needed legumes should include clover as one of its principle factors.

It will be noticed from the table that alfalfa produces even more digestible protein than does red clover. The yield of digestible protein per ton is 220 lbs. as contrasted with 136 lbs. for red clover. Fortunately alfalfa is a heavier yielder. Our Agronomy Department at the University of Wisconsin estimates that 4 tons is a fair average yield. If it is possible to raise an average of 4 tons per acre, this would, with well cured alfalfa, amount to 880 lbs. of digestible protein per acre.

While the yield of digestible protein on a good alfalfa field is enormous, its value is still greater emphasized when we consider that a good quality of alfalfa analyzes on a par with bran, and to a considerable extent can be made to take the place of bran, as well as other grain feeds. Feeding trials at various experiment stations with dairy cows show that alfalfa can be made to take the place of at least one-half of the grain usually fed our dairy cows.

Mr. Math. Michels, former president of the Wisconsin Dairymen's Association, is one of Wisconsin's progressive farmers, and he has progressed so far that he is able to put his herd into the Advanced Registry with practically no grain—simply corn silage and alfalfa. Not all Wisconsin farmers are ready to admit that they can feed their cows successfully in this way. The results, however, that Mr. Michels has obtained are worthy of careful study, and there is no question but that if we

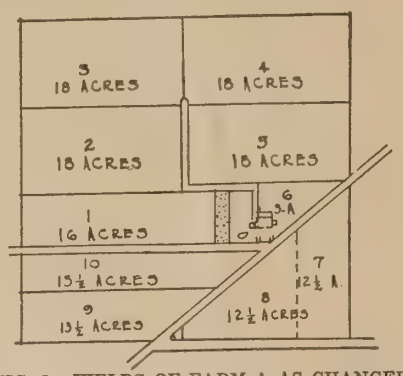

FIG. 2. FIELDS OF FARM A AS CHANGED TO PROVIDE A REGULAR AND SYSTEMATIC ROTATION

will grow alfalfa as he is growing it, that we can cut out a large slice from our expensive feed bills, as the nutrients needed by dairy cows can be produced more cheaply with alfalfa than with grain. Alfalfa is one of the weapons that we can successfully wield in our efforts to reduce the cost of producing milk.

Alfalfa is a more recent crop than red clover, and in some respects is more difficult to raise. Fortunately we are rapidly learning how to handle this crop successfully. I will not attempt to enumerate the various conditions such as inoculation, liming, preparation of seed bed, etc., that are essential to the successful growing of alfalfa. We have bulletins on this subject that can be had for the asking. What I wish to do is to show the importance of this crop and discuss how it can be made to fit in a regular and systematic rotation. This can best be done by taking a couple of actual farms and showing maps of these farms before and after planning a systematic rotation with a liberal allowance for legumes.

Figure 1 represents a map of farm A before attempting to provide for a systematic rotation. This farm is naturally well drained, and will lend itself at once to the prompt adoption of a rotation system. It will be noticed that the fields have already been laid out with considerable thought, and a rational though not definite system of rotating these fields has been practiced with very satisfactory results. The farm is badly cut up with roads and this fact must be carefully considered in remapping the farm.

The farm is producing market milk and cream and pure-bred dairy cattle. The owner desires to produce all the roughage needed and as much grain as possible. Fields D, E, and F of the original plan slope to the north, while fields C, B, and G slope less abruptly to the south. From 30 to 35 acres of corn are needed each year to furnish sufficient silage for 30 to 40 cows, and an equal number of heifers and calves. For this purpose the revision of the farm shown in Figure 2 was recommended, and adopted by the owner.

Field No. 1, north of the road, and fields 7, 8, 9, and 10, south of the road, are devoted to a five-year rotation. There need be no division of fences between 7 and 8, nor between 9 and 10.

The buildings are located north of the road. It is desirable, therefore, to have the rotation which furnishes the pasture on this side and within easy access from the barn. Fields 2, 3, 4, and 5 are arranged for a four-year clover rotation, in which provision is made for pasture. Unfortunately the slope of the land to the north in fields 3 and 4 necessitates the laying out of the fields in such a way that the long side of the field runs east and west. This is done so that the fields will be worked at right angles to the slope. Experience on this farm has demonstrated that this arrangement of the fields is imperative. Otherwise, it would be more convenient to have the fields run north and south. Field 6 is a small extra field, that can be used for special or supplementary crops or as paddocks for live stock.

The rotation plans and their adoption to existing conditions on the farm follow:

Farm A—Alfalfa Rotation

Year after revision	Field No. 1 16 A.	Field No. 7 13.5 A.	Field No. 8 13.5 A.	Field No. 9 12.5 A.	Field N 12.5
1st	(A) Grain seeded to clover and timothy	(B) Oats and peas	(C) Succotash	(4) Corn	(5) Grai to a
2nd	(B) Clover and timothy	(C) Oats and peas	(4) Corn	(5) Grain seeded to alfalfa	(1) Alfa
3rd	(C) Clover and timothy	(4) Corn	(5) Grain seeded to alfalfa	(1) Alfalfa	(2) Alfa
4th	(4) Corn	(5) Grain seeded to alfalfa	(1) Alfalfa	(2) Alfalfa	(3) Alfa
5th	(5) Grain seeded to alfalfa	(1) Alfalfa	(2) Alfalfa	(3) Alfalfa	(4) Corn
6th	(1) Alfalfa	(2) Alfalfa	(3) Alfalfa	(4) Corn	(5, Grai to a
7th	(2) Alfalfa	(3) Alfalfa	(4) Corn	(5) Grain seeded to alfalfa	(1) Alfa

From this rotation plan it will be noticed that it takes three years for field No. 1 to adjust itself to the rotation plan. It takes 2 years for field No. 7, but only one year for field 8. Fields 9 and 10 adjust themselves to the rotation plan at once. The owner of this farm has been successful in growing clover and timothy. He thinks he can grow alfalfa successfully. If it seems desirable to grow alfalfa less rapidly than indicated in this plan, clover and timothy seedings can be substituted for alfalfa seeding, and at the end of 2 years corn or any other annual crop can be substituted for what would have been a 3-year alfalfa rotation, and the field will again fit back into the alfalfa rotation plan. If desired a grain crop can be grown without seeding down, to be followed the next year with clover and timothy. This clover and timothy would then be ready to plow up at the time the rotation plan calls for corn.

for 3 years, when it can be plow and put into corn. In the third field No. 2 should be availabl pasture, but as it may be uns pasture alfalfa, a temporary can be placed in this field to se the alfalfa from the rest of the

tarting with Pure-breds

THOS. W. BARNARD, Wisconsin

HEN I first started farming I had but little equipment save my love he game, a team, a couple of cows, ew tools, and a small farm. As so as possible I increased the cows o alf a dozen and devoted my major ts to feeding them. One of my test handicaps in starting was a e apple orchard which covered it half of the plow land on the n. To some people an orchard is thing of beauty and a joy for-", but to me it was one large ex-se. We gave it all the care and ntion we knew, co-operating with h Minnesota College of Agriculture two seasons in pruning, spraying,

BESSIE OF MENIE, AYRSHIRE COW OWNED BY THOS. W. BARNARD, WISCONSIN
e is one of the foundation cows in the herd he is building.

keting, cost of production, etc., the ledger balance was always us. It would freeze, or rain, or or do some other disastrous and reventable thing just at the time poil our crop nearly every year. course, we did harvest some good es, but never enough to make it h while.

the meantime I decided that an-r thing I could not afford was le or scrub cows. My calves were ntire loss and I figured that my production could be increased. original cows were very good. in particular, a grade Ayrshire d "Pansy", was a wonder. Had been a full blood and been given l blood" care, her name would go n in history. I have often wished I knew her sire. She was a ect type of Ayrshire cow weigh-about 1,400 lbs., with an immense el and udder. Her sire must be , along with so many other bulls hat sad requiem of "had we but vn they 'might have been' great." s generally the case with grades—rossed, her heifer calves all fell short of their mother's perfection. first venture in pure-bred stock six Jersey heifers. They were heifers and are undoubtedly do-their share today, but we didn't that they were filling our bill as as something else might. I have ys contended that cows were a matter of individuality and than breed, and I don't want to any reflection on the Jerseys, but experience was that they re-

TTLE BESSIE OF ARGYLE HAS AN A. R. RECORD OF 10,000 LBS. MILK, 400 LBS. FAT
NED BY THOS. W. BARNARD, WISCONSIN

quired particular care and rather choice feed, although perhaps not so much of the latter as my present animals.

My requirements were more milk, a lower test, and animals that could stand hardship. After carefully studying all the breeds I decided that the Ayrshire came as close to what I wanted as anything could, and my subsequent experience has been most satisfying. My cows eat and relish anything that is put before them in the way of feed and turn out a large flow of fine, yellow 4 per cent milk with what seems to me a minimum of waste. They are mostly head, neck, barrel, and udder with but little in the way of legs; just enough for proper locomotion. I always figured that cows get most of their feed from the floor or ground and never could see much use for long legs. Their only use is as a camouflage for small cows in making them pass for big ones. After selling my Jerseys I bought an Ayrshire cow. And right here I want to say that I consider this the proper way to get started in pure-bred cattle. Of course, if one has a large herd of grades and no bull to breed to, he will need a bull also. There are those who say that it is better and cheaper to buy heifers and raise them. I can't see it that way. At best a calf is a gamble; maybe she'll grow up to suit our fancy, maybe not. There are lots of good cows for sale at very reasonable prices, prices that seem to me to be far cheaper than you can get the same quality for in a calf. And then you must wait a couple of years; two years of feeding, care, and a long chance.

A little while ago there was a discussion in the Dairyman by a subscriber who bought some Holstein cows and was "stung". This, of course, will happen in "the best regulated families", but it seems to me that if a man is any judge of cows at all he is more apt to be "stung" on a calf than on a mature cow. I have known of instances where heifers of choice pedigree have sold as high as $1,000, only to develop into large chunks of beef, with no more milk than the commonest scrub. One item that is being emphasized now is the susceptibility of heifers to abortion, a very malignant and little understood disease on which there is no law or test in force; an ideal place to get caught, perhaps innocently, perhaps not. In purchasing a cow that has had two or three good calves one can be reasonably sure that she will go on repeating. An extra precaution is to notice the calf crop of the herd; is it normal?

Another point is that of enthusiasm and interest. It is very fine for the boys and girls to raise calves, but father may buy a calf and forget it. Later, when he comes to look for a fine, full blood cow he'll say: "Shucks, that runt, no better than what I've got." He'll either quit full bloods, or try another breed with good prospects of the same success. Now, if he buys a cow that is well grown, good looking, and bred to a good bull, from a man who has a clean reputation, he has a cow that is right with him. She must be milked, there is soon a calf to be raised, and it is a going concern from the start. The hardest part is over—getting started. Another interest booster is to test your cow. There are lots of good ones untested.

FOUNDATION STOCK OF THE AYRSHIRE HERD BEING BRED BY THOS. W. BARNARD, WISCONSIN

My original cow had just dropped her third calf and had reached a maximum production of 16 lbs. per day when I bought her. Not much, you'll say, but I was young, foolish, and "wise". She was straight as a line, had a middle like a moving van, a nice, soft hide and udder—everything but the milk. Her owner felt about the same way that I did about her, without any hope, so he sold her cheap. That year she attained a flow of 20 lbs.; the next, 38 lbs.; and the next, she hung around 60 lbs. for some time, all on two milkings a day and just ordinary good farm care. Her main diet has always been corn fodder, hay, and pasture, silage part of one year, and very little grain. She is abnormal in the amount of milk she will turn out and the fine condition she will keep in without seeming to need or care for grain. Her average test is about 4.3 per cent. Her calves return her purchase price nearly every year and all the time she helps to swell the cream check. At present I am raising her son, "Echo James", to head my herd. He is sired by a son of Bessie of Menie, my best cow, and combines the good qualities of his dam and sire's dam. I expect great things from him and his family. I have his mother, grandmother, aunt, and half-sister in the herd. He has been pronounced by several who should know as one of the typyest bulls they have seen. This shows what can be done with faith and a cow.

I later purchased three dry cows and a heifer. I haven't yet had the opportunity I would like to give my cows real records. My best production to date has been this year. Little Bessie of Argyle reached a maximum production of 77 lbs. a day. Her record for May was 2,253 lbs. milk containing 85.6 lbs. fat, at ten years old. For the four months since freshening she has averaged over 65 lbs. fat a month, mostly on two milkings a day. Any of my aged cows will do nearly as well and I am sure some of them much better. From now on they will have more chance.

My herd is beginning to take on a real form and purpose and while I have had many hard pulls and disappointing experiences, the road ahead should be smoother. I expect the coming calves to show the type and uniformity the last few have shown. When they begin to line up like this it makes the game worth while. I certainly believe in keeping pure-bred stock of all kinds where breeding is carried on to any extent.

The tuberculin test is indispensable nowadays and I have always had my stock tested annually or oftener, although no suspicious animal has ever been found. In raising my young stock I like to give them plenty of milk, oats, hay, and exercise, pushing them along just as fast as possible. In the group showing part of the herd the white heifer on the right is only ten months old while to all appearances she is a regular cow. My bull, Echo James, weighed nearly 600 lbs. at six months old. Such stock is never hard to sell and makes satisfied customers.

Fertility of the soil should be assured for wheat by following the best practice of soil enrichment in each section of the country.

The Automobile and the Farmer

"Do you know that right now there are 5,000,000 motor vehicles in use in the United States, or one to every twenty persons? In these cars, twenty-five million people, one-fourth of the population, could be transported 100 miles or more in a single day." This remarkable statement is made by John N. Willys in a recent analysis of the 1917 sales of Overland cars. The investigation showed 90% of the automobile use was for business purposes. It also disclosed the fact that the American farmer, who comprises 33.2% of the population, bought 53.1% of the automobiles sold last year.

In explanation of the popularity of the automobile on the farm, Mr. Willys says: "The farmer is buying automobiles because they have done more to lighten labor and change his entire plan of living and doing business than any other invention since the harvesting machine. In harvest time a needed repair no longer delays the farmer. His son, daughter, or wife quickly goes to town and returns with the needed part in so short a time that the delay is negligible. But think of the change it has wrought in his daily life. Pass these machines on the way to and from the city markets, loaded with butter, eggs, produce, and perishable products. The automobile has made the farm 30 miles from town, with the use of the motor-car, as valuable as the one 5 miles away that depends upon the horse."

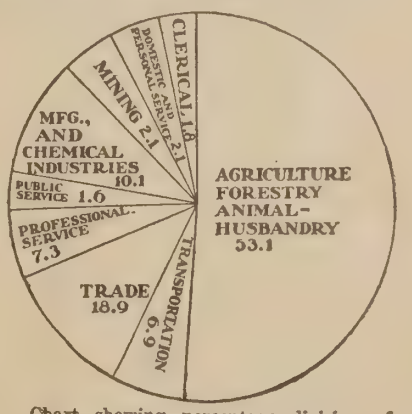

Chart showing percentage division of automobile ownership in various occupations in the United States as disclosed in the analysis of the 1917 sales of Overland automobiles. Approximately one-third of our population is credited as rural, yet these people purchased over half of the 1917 output of this make of car.

We had realized the growing use of the automobile upon farms, particularly these past few months in our attendance at farm meetings in remote farm districts. We have found the school yard and the plot of ground around the town hall filled with autos and there was scarcely a trace of the patient horse or the spanking team that only a few years ago was so familiar a sight and, indeed, the only means of conveyance available. However, we had scarcely realized that the farmer had so wonderfully outstripped the city man in the adoption of the automobile, yet reason tells us this must necessarily be so, for the farmer has practical use for the car and realizes more fully than his city cousin its value for both business and pleasure.

How to Use a Cow Testing Association

NOEL NEGLEY, WISCONSIN

THE fellow who bought a $30 suit and left it in the closet for the moths to eat did not know how to "use" a suit. It's the same way with the dairyman who invests $30 a year in a cow testing association and never looks into his herd record or takes any special interest in the work.

Of course, before a man can wear a suit, he has to buy it, and before a dairyman can get any good out of a cow testing association he has to be a member, and almost every live dairyman who has the opportunity is a member or expects to join as soon as an association can be organized in his community.

When a man puts $30 a year into an association he does it not to help anyone else, but to help himself. It is neither charity nor expense; it is an investment upon which he expects to get good returns. He is not getting something for nothing, but simply joining with 25 other men so that the service he gets costs him less. And what he gets for his money depends very much upon each man and his tester.

Some dairymen think that when they have paid their fees they have done all that is necessary, and association benefits should come pouring in. They may get $30 worth of good out of it, but if they "used" the association right they ought to get $300 out of their investment.

The secret of the whole matter, any successful member will tell you, is simply this—"Pay your fees promptly and then see to it that you get your money's worth." Your tester is not sleeping in 30 different beds and eating in 30 different homes a month simply because he loves you. He wants his pay and he wants to give you service.

Get Acquainted With Your Herd

Through his monthly visits the cow tester gives you in the herd book a written introduction to each of your cows. You will find that sometimes you have been entertaining an angel unawares, and sometimes a devil.

You will learn that you have been feeding some of your cows too heavily and others not enough. Weighing each cow's milk daily will take but little time and will enable you to feed economically and keep in touch with each cow. Daily milk sheets are furnished free to the members.

Keep up enough nerve to sell the cow that has already been with you but yet has proved herself unprofitable at the pail. Sentiment should not interfere with business in such a deal. Get the family interested in the kind of a cow that will make a profit rather than one that has a pretty hide. Use nerve enough, too, to buy feed for those cows that will make a profit on it even though it seems "out of sight".

Co-operate in Buying Feed

The reason why there are 26 members in an association rather than only one or two is because in some things 26 men can do better together than each by himself. This is often true in the matter of feed buying. Get together and buy what feed is necessary in carload lots, paying cash for it and taking it directly out of the car. Maximum prices have been placed on mill feeds and there is no saving in waiting until later. This late in the fall there will probably be no difficulty in storing feed for the rest of the winter. Get your orders in now so you can get your share, for if you don't and we have a winter like we had last year you probably will not get any.

Association members have an excellent opportunity to co-operate in the use of good bulls. In small herds bull service is very expensive, especially so when the bull must be sold at beef prices at the end of two years. The tester can arrange to exchange sires among members, thus avoiding the sacrifice, at beef prices, of a good bull, and the purchasing of another at a long price. If you secure a bull from among the members of your association you have the chance of seeing what the heifers are like both in regard to type and production. The monthly report of association work which is sent to the tester each month contains a list of cattle for sale and exchange from all the associations.

Get Acquainted

Many dairymen live close together but hardly know each other. Association picnics give one a good opportunity to have a good time and to enjoy the company of his neighbors. The winter meetings held monthly or as often as desired give an opportunity to discuss interesting topics or to hear some outside speaker. Take the whole family, too. They often get more good from it than does the dairyman. You often do not fully appreciate the excellent qualities in your neighbors until you really know them. You will learn something, too, every time you meet to discuss topics of interest to you, for there is no one who is so full of knowledge that he cannot learn something from some one else.

Sell Cattle at Higher Prices

Cows with good association records are wanted at prices well above those without records. Any surplus cows for sale should be reported to the tester and in any advertisements the records should be given. Yet, unless one is going out of the business, he should not sell his best cows even though the price be tempting, for if the cows are worth a large price to someone else they are worth about the same to you. Nor should you be too quick to condemn a cow as unprofitble as the result of one or two tests. Give her a good chance to make good before letting her go.

More value is being placed on yearly records made under normal conditions than on seven-day or other short time records in which the cow is forced to do her best.

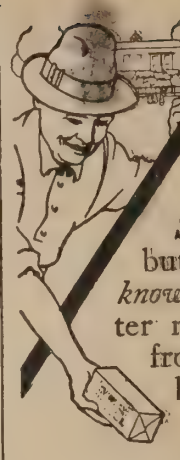
The Register of Production was established to give publicity to the records of good cows and to stimulate interest in the breeding and care of animals that can make as much as a pound of fat a day for the year. Already over two hundred cows have been registered. See if you cannot so breed and care for your herd that you will have a number to qualify for this honor each year. For details ask your tester.

The cow testing association is worth just what you and the tester make it worth. We will secure as good a tester for you as we can find, for we are anxious that every association should have a good tester. Yet, regardless of the excellence of your tester you will not be "using" the association rightly and the association will not amount to much unless you take interest in your own business and work the association for all the benefits you can get out of it. It is yours; make of it what you will.—From Wisconsin Bankers' Farm Bulletin No. 63.

THE NEW $35,000 SALE PAVILION AT FOND DU LAC, WIS., OWNED BY THE HOLSTEIN BREEDERS' SALE CO., A COMPANY IN WHICH THE STOCK IS HELD BY LEADING HOLSTEIN BREEDERS THROUGHOUT CENTRAL WISCONSIN

This is at present probably the most complete sale pavilion in the country. Practically the entire first floor is used to house the cattle. The sale room which is in the center of the building on the second floor, is a large one and is provided with comfortable chairs for spectators and buyers instead of the usual bleacher seats. In addition the building includes a spacious dining room, kitchen, and sleeping rooms for the men who take care of the cattle.

Things County Agents Are Doing in Wisconsin



Early in the season, county agricultural agents were requested to make seed corn surveys. Owing to the unfavorable condition of weather during summer and early fall last year, it was found that only about six per cent of the crop matured well enough so it could be used for seed. There were only 50,000 bushels of good Wisconsin seed corn in sight or about one-eighth of the quantity required to seed the normal acreage of the state.

County agents got busy assisting farmers wherever possible by advising how to store, dry, and save the corn properly after harvested. In one county the county agent through his service and advice saved the farmers 5,000 bushels of good corn that otherwise would have been fed and lost for seed purposes. In still another county the bankers co-operated with the county agent and furnished money to farmers without interest with which to buy seed corn. Despite the fact that it was a poor corn year and that there was a shortage of seed corn in the state, Wisconsin planted 1,780,000 acres, nearly its normal acreage, and the corn crop this year is an exceptionally good one.

Make Potato Survey

In the potato growing section of the state, county agents make surveys to ascertain potato acreage that would be planted to this crop in the spring of 1918. In view of the fact that the 1917 crop had been an unusually large one and prices had taken a sudden slump in the spring of the year, it was, therefore, feared that the acreage planted would be considerably reduced. However, through the diligence of the county agents in encouraging farmers to keep up their acreage, nearly full acreage was planted and the crop this year is estimated to yield from 25 to 30 million bushels.

During the past year out of fifteen prizes awarded at the state potato show, the county agent counties were

led eleven, and six of these were rst highest on the list.

ilo Survey Reveals Growth

surveys were made in nearly all counties of the state and it was that about one-third of the rs in the state owned and made f silos. Particularly is this true e farmers of the southern half e state. The northern section is rapidly forging to the front in iry industry and it has resulted arge increase of silos on farms. stimated that 15,000 silos were in the state during the period of This came largely as a result of systematic campaign put on gh the county agents.

'ork Production Stimulated

en the call came for the produc- f more pork as a war emergen- rveys were made in sections of ate where hogs are raised. The y agents, through the direction e Agricultural Extension Ser- immediately urged farmers to one more litter of pigs,—to , breed, and feed them properly. spite of the fact that there was a ge of feed corn and that a large er of brood sows and other hogs sold and shipped to neighboring where corn was more plentiful, has been an increase of seven ent in hog production in the over the preceding year.

Grain Yields Increased

gely through the efforts of the y agricultural agents, an in- of 128 per cent in spring wheat ge has been made. There 333,000 acres of wheat grown in ate and from all reports the to- eld of wheat this year will be 2⅓ times what it was the last before the war started.

orts were also made to maintain rease the acreage of other farm The acreage increase as com- with same crops last year is as s: Barley 18 per cent, oats 4 nt, rye 4 per cent, and substan- ncreases in acreage were also in other farm crops.

More Sugar Beets Planted

en the call came for more sugar, ar emergency this spring, a sys- ic campaign for a larger acreage gar beets was put on by the coun- nts under the direction of the ultural Extension Service, in ies where sugar beets are grown ably. It resulted in an increased ge of 25 per cent over last year.

s Add to Farm Labor Supply

en the problem for additional labor came up this year, steps immediately taken by the coun- nts in co-operation with the Council of Defense in making of the situation. Owing to the ds made by the war and indus- of farm help, and to meet this the United States Boys' Work- Reserve was organized. The t single supply of possible farm would come from the high s of the states. 16,000 young anging in ages from 14 to 21 employed.

eal was made to the boy's pa- m, emphasizing the existing ng food situation. Boys went ms Friday afternoons and Sat- s. In most cases farmers took interest in the boys. On the the boy farm labor was quite ctory. However, the labor sit- this year was short, but not The outlook for farm labor ear is exceeding short and much rom this source is anticipated.

Other Interesting Work

one grain growing county the agricultural agent last year 17% oats in fields affected with This spring he conducted oat smut treatment demonstrations all over the county; 40,952 bushels were so treated. Where the seeds were treated only trace of smut was found; in untreated, as high as 18% of the oats were affected. The prevention of the disease in this case alone meant a saving of over $5,000 at present price of oats.

In another county farmers were in the habit of purchasing feed for live stock individually, but the county agricultural agent succeeded in getting the farmers to co-operate and purchase their feed in suitable quantities. In a very short time he saved the farmers $630 in the purchase of feed.

In still another county 3,500 bushels of good seed corn have been saved and taken care of by farmers last fall through the advice of the county agent. He instructed them how to select seed corn, how to store and to fire-dry properly.

One county agent says with regard to his organization work: "Eight Local Councils of Defense have been organized. Agricultural committee in each of these councils consists of a chairman and two members of each school district, making a total membership of 250." Barberry eradication, feed and crop surveys, state and county fair exhibits are among the things more recently handled with much satisfaction.

The following is a brief summary of what a county agent accomplished from June 4, 1917, to June 4, 1918: 1,000 acres of swamp land was properly tiled under direction of county agent, 27 new pure-bred bulls were placed on farms, 23 new barns with proper system of ventilation were built. Over 200 silos were constructed. Three cow testing associations were formed, 180 tons of lime were secured by farmers and spread on acid soils. The wheat crop was trebled and much pedigreed grain was seeded. Bee, potato, and live stock associations were formed and are now running smoothly. A carload of certified seed potatoes was used to replace scrub potatoes for planting. 5,000 bushels of oats were treated for smut. Two carloads of fertilizer were ordered co-operatively and the fertilizer properly applied. 400 young men attended winter short course.

It is also significant that the 38 members who had been against the county agent now are with him and unanimously agreed to allow him $600 aditional expense money. They engaged an office assistant for him. They also supplied him with a complete office equipment. Many other favors are now being shown the county agent that were not possible a year ago.

Wisconsin. A. W. HOPKINS.

National Dairy Union Finances

Balance on hand Oct. 1, 1918	$4,037.51
Total receipts	123.36
	$4,160.87
Total disbursements	356.85
Balance on hand Nov. 1, 1918	$3,804.02

This is to certify, I have today audited the books for S. B. Shilling, treasurer of the National Dairy Union, and find the receipts from Oct. 1, 1918 to Oct. 31, 1918, to be $123.36, and the amount paid for out of which he holds vouchers, the sum of $356.85, leaving a balance on hand Nov. 1, 1918 of $3804.02.

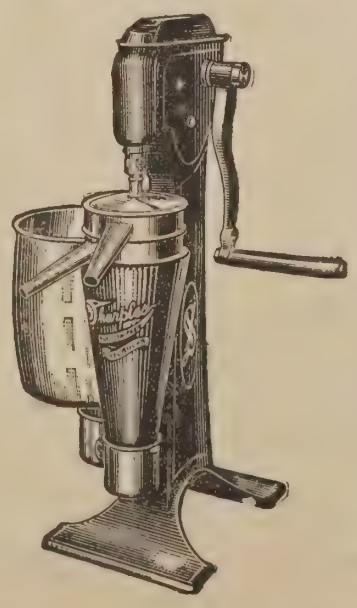
F. P. COLYER, Auditor.

Live stock reporters of the Bureau of Crop Estimates had on their farms 2.1 per cent less cattle, 2.4 per cent more hogs, and 1.2 per cent less sheep on September 1 than on August 1, 1918. Of the total cattle reported, 51.7 per cent were cows and heifers over 1 year old, 26.2 per cent were steers and bulls, and 22.1 were calves.

If Bossy Could Talk She'd Say—

"I did my dernedst, and gave milk rich in cream, but there he goes losing a lot of t with a separator that hasn't any sense!"

It isn't sensible for a separator to waste your cream when you turn *below speed*—yet that is what happens with *every* fixed feed separator.



The sensible thing for Bossy's owner to do is to use a Sharples Suction-feed Separator—it *skims clean at any speed.*

There are thousands of cows, part of whose contribution to the wealth of the nation and the individual is *wasted* by fixed-feed separators.

But if Bossy's owner uses

SHARPLES
SUCTION-FEED
CREAM SEPARATOR

there is no possible chance of wasting cream through imperfect separation. The Sharples skims clean at any speed. This is not true of any other separator. Even though the proper separating speed is marked on the handle, tests show that 95% of all separators are turned too slow. That means cream loss—but not with a Sharples. Your muscle does not control the clean skimming—the patented suction-feed guards that. It is in the nature of an insurance policy. It *insures* profits.

Add to clean skimming the advantages of easy cleaning (only one piece in bowl—no discs); uniform thickness of cream; knee-low supply tank and you can understand why there are over a million Sharples users. Write for catalog to nearest office, addressing Dept. 10.

The Present World Food Situatio

AT a special conference of Federal Food Administrators held shortly before his departure for Europe, Mr. Hoover discussed the work accomplished and told of the pressing world food problems presented by the collapse of the war. There are 100,000,000 people that are close to starvation and in want. Europe has been devastated and is now in the throes of a social revolution that will be intensified if food is not forthcoming.

How to meet this situation was the burden of Mr. Hoover's speech and he devoted himself largely to a survey of the world's available food supplies. He estimates that until the next harvest there is sufficient supplies of wheat and rye, as also of beans, peas, rice, beef, sugar, and coffee. He finds, however, that there is a shortage of three million tons of high protein dairy feeds and a shortage of about three billion pounds of fats, such as pork products, dairy products, and vegetable oils. Of all these foods, except possibly protein feeds, we have, he says, a sufficiency for our own people and in many of them large surpluses. The United States will be in position to furnish twenty million tons of foods of all kinds for export against our pre-war exports of one-third this amount.

The matters of particular interest to dairy farmers are contained in the following extracts from Mr. Hoover's address:

"We can export, together with other surplus countries, an apparent sufficiency of the coarse grains for feeding purposes, that is, of oats, barley, and corn. On the other hand, there is a world shortage of high protein feeds, that is, the wheat feeds, the seed and bean meals, upon which the dairy production of the world, and particularly of Europe, so considerably depend. This shortage extends to the United States, and, in our case, is due largely to the necessary diversion of cottonseed meal to use as fertilizers and, to some degree, to our shortage in wheat mill feeds, due to our hitherto reduced use of wheat flour. This latter will be somewhat corrected by the elimination of substitutes in our bread. Thus the change in world conditions should somewhat ameliorate our dairy feed situation.

"The shortage in protein feeds directly contributes to the world's shortage in the supply of fats. If we examine the position of the dairy products, the pork products, and the vegetable oils, we find that in every item there is a shortage in the needed supplies for the whole world, although we are estimating with economy the export possibilities of the United States in all these products at over four billion pounds, of which from three to three and one-half billion comprise pork products. This world fat shortage is due primarily to the fact that Europe has been steadily under-feeding its dairy herds, has made steady inroads into its herds of hogs during the war, and to the fact that there has been a great degeneration in the production of vegetable oils in certain regions, owing to the inability to secure shipping.

"Of our export possibilities in fats, the largest item is pork products. Here again we have a right to congratulate ourselves as to the policies pursued in the administration of food supplies in the United States by the Department of Agriculture and the Food Administration. If you consider that we have reasonable promise of ability through increased production and conservation to export seven times as much products as our pre-war average and if you consider the vital importance of this extra contribution in fats in this new war against famine, we are justified today in every act in the stimulation of production of this commodity. While cannot supply the world's full ficiency we have ameliorated it enormously.

"As you will recollect, eight months ago, when we had to de our food policies, we stated that only hope of a sufficient product of fats and meat for the world eit in peace or war, lay in the stimu tion of production of the Ameri hog. In that direction we could tain results in twelve months, whe as in any other direction, years wo be required for expansion of fat p duction. The American farmer responded to a remarkable deg In order to assure this change in ricultural courses we promised farmer a fair return on his hogs, far as our control of export or gave us the power. It is our dut make this undertaking good.

"Yet, with all our supplies, world will be far deficient in its mal supply of fats for two or th years at least. Our internal po with regard to this group of com dities must therefore be one tow intensest economy in consumptio we are to carry out our high pur of furnishing food to a famine str en world.

"Policies of conservation req great care and guidance. For stance, for the next 30 to 60 there is barely enough shipping our shores to take care of our cur production of pork products, and storage is deficient. Later on w ships are available, we will need upon our people for great sacri On the other hand, the shortag our supply of dairy products is t so acute that we are compelle now limit the export of this pro Dairy products are vital to the pr tion of child life throughout world that we should immediatel duce our unnecessarily large sumption of butter and conde milk.

"This being the new world situa in food, created by the collapse o war, the prime changes in our po on today's outlook can be sum ized:

"That we may now advantage abandon the use of substitutes i wheat bread; that we will stil quire economy and eliminatio waste in its consumption; that fo present we need conservation in ter and condensed milk; that mately we must extend this to a fats. We can contemplate, a most, maintaining fully three po per month of sugar per perso household sugar and on the pr outlook, and we can by the a bility of Java sugars to Europe at once to relax more restraint sugar pending some change in E policies.

"There is one policy which c change, and that is the vital nec to simple living; to economy consumption for commodities or less substitute for each other. must realize that the spectre of ine abroad now haunts the abun of our table at home.

"At this moment Germany ha alone sucked the food and an from all those masses of peopl has dominated and left them sta but she has left behind her a wreckage of social institutions this mass of people is now confr with engulfment in absolute ana If we value our own safety an social organization of the world, value the preservation of civiliz itself, we cannot sit idly by an the growth of this cancer i world's vitals. Famine is the m of anarchy. From the inabili

nents to secure food for their
l grows revolution and chaos.
n ability to supply their people
stability of government and
eat of anarchy. Did we put it
igher plane than our interests
protection of our institutions,
t bestir ourselves in solution of this problem. There are millions of people now liberated from the German yoke for whose interests we have now fought and bled for the last eighteen months. We dare not neglect any measure which enables them to return to health, to self-support, and to their national life."

Progress of World Feeding from the United States

following table shows the increase over normal in exports of foodstuffs
United States since it became the food reservoir for the world on ac-
f the war:

	Total Exports				
	3 Pre-war Average	1916—1917 Fiscal year	1917—1918 Fiscal year	July 1917 to Sept. 30, 1917	July 1918 to Sept. 30, 1918
Products, lbs.	186,375,372	405,427,417	565,462,445	93,962,477	171,986,147
Products, lbs.	996,230,627	1,498,302,713	1,691,437,435	196,256,750	540,946,324
y Products, lbs.	26,037,790	351,958,336	590,798,274	130,071,165	161,245,029
etable Oils, lbs.	332,430,537	206,708,490	151,029,893	27,719,553	26,026,701
ins, bus.	183,777,331	395,140,238	349,123,235*	66,383,084	121,668,823
ar, lbs.	621,745,507	3,084,390,281	2,149,787,050	1,108,559,519	1,065,398,247

arvest 1917—1918 was 200,217,333 bushels below the average of the three previous years.

Price Again Boosted in New York City

D'S DAIRYMAN:—All grades of

J. Dillon is authority for the statement that the big milk companies will profit to the extent of $384,000 for the balance of the month through the milk raise, and Stanley Mills, office manager of the Dairymen's League, vouches for the allegation that the dairymen will gain nothing. Mr. Dillon said he could see no reason for the new milk raise. He blamed the present situation on the system of distribution, which he said would continue as long as the consumers of milk and other dairy products would stand for it. He added that as things are now conducted the claim is that it costs twice as much to distribute milk as it does to produce it. Mr. Dillon said:

"Loose milk can be distributed for 3 cents a quart above the dairy farmer's price. That would bring it to the people of the city for 11½ cents per quart instead of 14 cents, as it is now.

"Bottle milk can be distributed for 5 cents a quart. That would make it retail here for 13½ cents a quart, instead of 17 cents, or for poor people who are forced to buy in pints, 22 cents.

"It now costs $1.37 to take a can of milk from the car to the store door and collect the money for it. A man could get rich performing that service for 20 cents a can."

New York. A. H. KOLBE.

Minnesota's Agricultural Program

Minnesota is perhaps the first state in the Union to have ready a well-defined agricultural program to meet the new food conditions of the world. A. D. Wilson, federal food administrator for Minnesota, who also is director of agricultural extension in the state, has issued a call to all the people to regard the period from December 2 to 7 as "Farm Bureau Membership Week" in Minnesota. The purpose of "Farm Bureau Membership Week" is three-fold. The world is calling upon the United States for its food. This call must be met. The present farm bureau in Minnesota has an enrollment of some 30,000 members. There are, however, 160,000 farmers in the state. Every farmer in the United States will want to play as big a part in the reconstruction of the world as their sons have played in making that world worth the reconstructing. To do this means well organized effort. The "new" farm bureau, it is the hope, may "be considered not alone as an organization to aid the work of the county agent." Instead it is the desire that it may "be understood as becoming the officially organized agency or institution, educational in character, for co-operating with state and nation in meeting agricultural needs and in planning, administering, and directing all phases of extension work in agriculture and home economics in the county."

Happy Feeds Happy Stock

Successful feeders lay great stress on the contentment of their livestock, otherwise their animals are lacking in strength and vigor. The feeds which produce strong, vigorous animals may be fittingly named

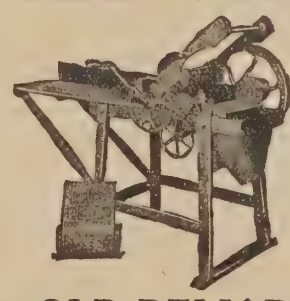
The Happy Feeds

These high grade balanced rations are based—not on theory, but on a knowledge backed by many years of experience as manufacturers and feeders.

The Happy Line of Feeds are the result of the newest discoveries in animal nutrition, both in laboratory experiments and in practical commercial feeding tests. They are proven production feeds of the highest character.

The new and vital elements of nutrition discovered by Dr. E. V. McCollum of Johns Hopkins University and Prof. Evvard of Iowa are combined in Happy Feeds and they produce truly Happy results.

Happy Feeds are made for hogs, dairy cows and poultry. Each feed contains only ingredients of the highest possible feeding value properly balanced for quick and economical production of growth and weight.



Each Happy Feed is a complete ration. Nothing else is needed. No other feed will produce the same big results for so little money. We believe this and so will you—after feeding them.

Our mills are located where the greatest variety of high grade feeding material is produced, enabling us to make better feeds and save you excessve freight charges.

Write for "Bulletin," samples and prices. State number and kind of stock on feed. Tell us your dealer's name and we will see that you are supplied.

Dairy Calf Club Movement

(Continued from page 615)

calves were distributed to the club members on the sixth of July at an average age of nine months and an average weight of 234 pounds. They were in very thin condition, having been raised on the Island where feed was scarce and having been on the way across for over two months' time. A large and enthusiastic meeting was held in connection with the distribution and those present were addressed by A. J. Glover of Hoard's Dairyman, E. A. Onsrud of the American Guernsey Breeders' Association, and M. E. Foley of the Indiana State Council of Defense. It was announced that a fall show would be held when the calves were about one year old and that some good premiums would be offered to the winners. They went home with the determination to come back with the best calf in the lot.

On Wednesday, October 30th, the first annual calf club show was held. Twenty of the twenty-seven calves were lined up for the contest and a nice lot they were compared with the calves which they took home less than four months before. Their weights show that they made an average of 143 lbs. in 115 days. Some of them were primped and clipped and shined as though veteran showmen had coached the work. Mr. Hill made a special trip to the show to tie the ribbons and before leaving he made the statement that not more than two calves showed any indications of not having had the very best of feed and care. Certainly this was quite a compliment to these junior Guernsey breeders who will be a big factor in the future Guernsey history of Boone county.

Making the Awards

While they were being lined up and placed on individuality, the records and story turned in by each member were graded and the final standing in the contest awards were anxiously awaited. There at the head of the line were two Nelson brothers with a good daughter of Primrose Brilliant of the Gree that had been adjudged the best individual in the lot. Would they win first place in the final awards? Next to them stood the Barker Boy with Imported Boone's Dairymaid, a deep middled calf with good size. Third in the line was the seven-year-old Crane girl with a calf that was rejected by the boy who drew her at the time of distribution because his father "would not give fifty cents for such a poor, skinny calf" and the discouraged boy went away leaving the calf tied to the hitch rack. Eighteen other boys and girls each holding a place in the line-up were anxiously awaiting the returns with the hope that they might get a higher rank in the final awards.

And then came the fateful decision from C. E. McClure, the county agent who is the local leader in charge of the club. He announced that Miss Arena Van Huss, whose calf had stood in fifth place, was the winner and a cheer went up over the fact that a girl had outwitted the boys and won the $25 prize and a copy of Mr. Hill's book, "The Guernsey Breed", which he gave as a premium. The second prize went to Noble Croin whose calf had stood fourth place as an individual; then came Arthur Van Huss, a brother of the girl who won first and so on down the line the fifteen prize awards were announced. The two brothers whose calf stood first had not kept their records as they should and had to be content with 8th prize in the contest, but no doubt their records from now on will be better and they will make a strong showing with their showy heifer next year. And so it goes. Each one is already looking forward to next year. They have ready started on their records another lot of liberal prizes been promised by local business n

Interest in the Guernsey busines Boone County is at high tide as a sult of this club. Not only ha gripped the club members and st ed them to think about dairy p lems and the breeding of Guern but it has interested their fath mothers, brothers, grandpare their neighbors as well, and, in f two or three entire sections of county. Several good Guernsey h have been bought since the started and two or three of the thers of club members are alre interested in getting some pure-h heifers, and so the results of the are beginning to show. Boys girls are being developed into da men and breeders. The communit taking a big and active interest only time can tell the many th that the Boone County Calf Club accomplish.

Exports of Meats and Fat Increase

Comparative exports of six g groups of staple foods from United States show a trend of co tions of unusual interest to An can farmers. According to the U Food Administration, exports of products during July, August, September of this year were than three times as great as du the same months in 1917. Export beef and dairy products during same period showed increases nearly double the former amo Comparative figures for the pr pal classes of food products follo

	Total Exports	
Classes of food	July, Aug., Sept.—1917	July, Sept.-
Beef products, lbs.	93,962,477	171,9
Pork products, lbs.	196,256,750	538,6
Dairy products, lbs.	130,071,165	161,2
Vegetable oils, lbs.	27,719,553	28,0
Grains, bus.	66,383,084	121,6
Sugar (includes Cuban), lbs.	1,108,559,519	1,065,3

It will be observed that only i case of vegetable oils and sugar exports been slightly less. The Administration calls special atte to foreign need for animal fats. S America produces hogs and products only in small amounts the United States must expect to ply these important nutrients several years at least.

The chief limiting factors, in dling the huge quantities of foo quired for exports, are transp tion, terminal and shipping facil and in the case of live ani slaughtering and packing equip for taking care of large market as fast as received. It is impo for farmers to clearly unders that with large production there be rational marketing if stab prices are to be maintained and avoided.

The part which conservation play in the food program is lik obvious. To provide by July 1, the 20 million tons of food for seas shipment, a steady conserv in American homes is essential. quantity of food is 75 per cent than we shipped last year and come from a harvest scarcel large. In general there is a market for all staple foods wit increasing demand for animal ucts.

Farmers of long vision will r nize that erratic prices, market and local increase in reserves be of temporary character, and conservation, which enables the ed States to fulfill its food ple means continued foreign trad American farm products.—U. FOOD ADMINISTRATION.

itting Legumes into a Systematic Rotation

(Continued from page 616)

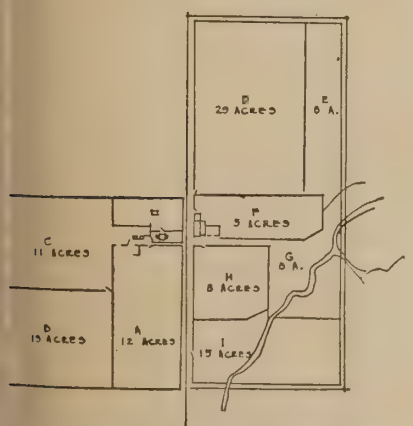
It will be noticed that on this farm bacco is to be grown for two years a cash crop. In this plan it will ke at least 3 years for field No. 1 to djust itself to the rotation for fields and 4, 2 years for field 5, fields 2 nd 3 adjust themselves readily to e rotation the first year. The following has been worked out as a suitble clover rotation:

Farm B—Clover Rota.ion

Year after evision	Field No. 6 10 acres	Field No. 7 10 acres	Field No. 10 10 acres	Field No. 11 10 acres
1st	(4) Grain seeded to clover	(A) Peas and oats	(B) Pasture 2 A., corn 7 A.	(3) Corn
2nd	(1) Clover and timothy	(B) Succotash or barley	(3) Corn	(4) Grain seeded to clover
3rd	(2) Pasture	(3) Corn	(4) Grain seeded to clover	(1) Clover and timothy
4th	(3) Corn	(4) Grain seeded to clover	(1) Clover and timothy	(2) Pasture
5th	(4) Grain seeded to clover	(1) Clover and timothy	(2) Pasture	(3) Corn
6th	(1) Clover and timothy	(2) Pasture	(3) Corn	(4) Grain seeded to clover

Part of field No. 10 (2 acres) was grass the preceding year, and is etained for pasture purposes. The alance of the field is put into corn. his field reaches the regular rotaon the second year. Field 7 reuires 2 years to reach the regular otation, while the other fields adjust emselves to the rotation the first ear.

The following is submitted as a uitable hog pasture rotation:



Farm B—Hog Pasture Rotation

Year after evision	Field No. 12 2 acres	Field No. 13 2 acres	Field No. 14 2 acres	Field No. 15 2 acres
1st	(A) Succotash	(2) Corn	(3) Oats and peas or rape	(4) Grain seeded to clover
2nd	(2) Corn	(3) Oats and peas or rape	(4) Grain seeded to clover	(1) Clover
3rd	(3) Oats and peas or rape	(4) Grain seeded to clover	(1) Clover	(2) Corn
4th	(4) Grain seeded to clover	(1) Clover	(2) Corn	(3) Oats and peas or rape
5th	(1) Clover	(2) Corn	(3) Oats and peas or rape	(4) Grain seeded to clover

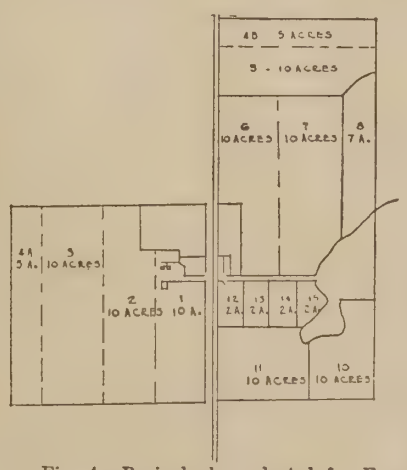
Three of the four fields adjust emselves to the rotation at once. ield No. 12, which would normally e put into clover, is put into succoish as a substitute for the clover op the first year.

It will be noticed that substitute ops are represented by letters and egular crops by figures. While ese plans provide for definite crops in each field each year, it must be borne in mind that weather and other conditions may come in to upset the best laid plans. However, these rotation plans can be adjusted to meet most any condition. If, for instance, alfalfa kills out two years ahead of time, it is possible to substitute clover. If alfalfa or clover kills out one year ahead of time, it is possible to substitute peas or oats, or any other annual crop, thus making it possible for the fields to come into the regular rotation again soon.

The mapping out of the farm and making provision for definite and systematic rotation, gives the farm manager a vision of his job, that projects well into the future. Having this vision the manager will study his proposition not simply from this year's standpoint, but from the standpoint of several years to come, and to this end will make his plans for his fields and cropping system so as to obtain the maximum results. In these plans legumes play a most important factor in the final results, and our aims should ever be to keep our fields into as large an amount of legumes as the farm can use. The success of the dairy farm apparently hinges on the successful production of leguminous crops for use in feeding dairy cattle.

IG. 3. FARM B AS THE FIELDS WERE ORIGINALLY LAID OUT

This farm has 120 acres, 8.7 acres being in ermanent pasture and woods and 98 acres lapted to field crops. The soil type is clay am and the topography is rolling.



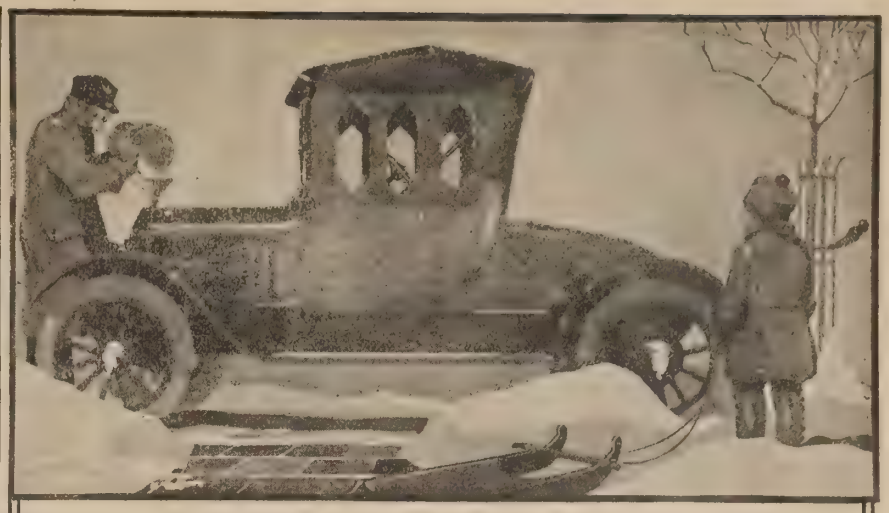


Fig. 4. Revised plan adopted for Farm B, which provides for a systematic and regular rotation for a dairy farmer carrying hogs.

Visconsin Holstein Meeting and Sale

At a recent meeting of the Board f Directors of the Wisconsin Holein Breeders' Association it was deded to hold the next annual meeting f that association at Fond du Lac, Vis., March 11 and on March 12 and 3 to hold a consignment sale of the est representatives from Wisconsin olstein herds. F. H. Everson of ake Mills was elected sale manager.

Price of Farm Horse

The average price of a farm horse in the United States, all ages included, declined from $145 in 1910 to $131 in 1916. In 1917 the average price went up to $132, but in 1918 the fall was resumed and the average price became $128. In 1910 the price of a farm horse averaged about 240 per cent higher than the price of a cow; now a horse averages only 50 per cent higher.

Farmers, Protect Your Car To 5° Below Zero For $1.50— It Lasts All Winter.

Johnson's Freeze-Proof is the logical anti-freeze preparation to use in automobiles, trucks, tractors, gas and stationary engines, and electro lighting and heating plants. It is inexpensive—does not evaporate—is non-inflammable—easy to use—and guaranteed. It is much more dependable than alcohol as there is no evaporation.

JOHNSON'S FREEZE-PROOF

is a great time and money saver. It does not evaporate so one application is for the whole winter. It raises the boiling point of water from 20° to 40°—chances of overheating are reduced correspondingly.

Don't bother to drain your radiator every night—use Johnson's Freeze-Proof and you can leave your gas engine and tractor uncovered on the coldest nights—Leave your car in an unheated garage—IT CAN'T FREEZE.

One package of Johnson's Freeze-Proof will protect a **Ford** to 5° below zero, and two packages to 50° below zero. For larger radiators, or to protect to a lower temperature, use additional Freeze-Proof according to scale on package. Cost $1.50 per package in U. S. A. East of Rockies. Get it from your nearest dealer.

S. C. JOHNSON & SON, Dept. HD Racine, Wis.

Established 1882.

Coming Events

National Farmers' Exposition, Dec. 6—14, Toledo, Ohio. Manager, H. V. Buelow, Toledo.

Michigan Dairymen's Association meets at Lansing, Dec. 3-5. Secretary, Martin Seidel, Bay City.

Farmers' National Congress meets in Jacksonville, Florida, December 3-6, 1918. President, J. H. Kimble, Port Deposit, Md.

W. D. Hoard

It is with deep sorrow that we announce the death of our co-worker, W. D. Hoard, Senior Editor and founder of Hoard's Dairyman. The passing away of this great man was on Friday, November 22nd, at 9:30 a. m. We are unable at this time to give to our readers a review of his work and his life, as the last forms of our paper close on Friday morning. Next week we shall give our readers a rather full account of his career.

National Dairy Council Meeting

The after-the-war reconstruction period is going to call for some vigorous constructive work on the part of the dairy industry so that this great source of food may occupy the place it merits in the new world's commerce regulations.

It is therefore very timely that the national associations, organized for the purpose of carrying forward educational and upbuilding movements for the industry, should bring together the men of clear thinking and constructive ideas to take counsel together as to what should be done in the interest of this great industry.

The National Dairy Council has, with these thoughts in mind, called its adjourned annual meeting at the offices of the Association in Chicago, at 130 North Wells Street, for ten o'clock on the morning of December 5th.

The National Dairy Association, in conformity with its by-laws, will hold its regular annual meeting at the offices of the Association, 130 North Wells Street, Chicago, on Friday, December 6th, at 10:00 A. M., and it is sincerely hoped that the men of the industry who feel a responsibility in it will attend both of these meetings, even though they may not directly belong as yet to either of these organizations, but all members are particularly urged either to attend in person or see that their proxies are in the hands of some one whom they consider competent and sufficiently interested to properly represent them and the industry.—W. E. SKINNER, Secretary.

New York Butter Market

NEW YORK CITY, NOV. 19:—Never before in the history of the dairy industry has the value to creameries of high quality production been more emphasized than at the present time. While quotations may indicate that there may be a considerable demand for under-grade butter actual facts do not bear out that supposition. There are great quantities of firsts on the market that can be bought for 59c but there are no extras or higher scoring butter available that can be bought for anything under the top quotations for those grades. The creamery which has placed emphasis on quality is surely reaping the benefit of its efforts toward high grade production. If the farmer could but visit a butter market, especially at this season of the year, he would be thoroughly convinced that he should do his share, in co-operation with the creamery, to produce a butter that will score as a high quality product. He would realize that any effort he put forth to produce a good cream would be paid for several times in the better price that would be received for the butter by the creamery.

Since last week Tuesday quotations on extras and higher scoring butter have advanced a full cent. The advance was made on Wednesday and Monday. The closing days of last week witnessed a weakened market but it quickly regained its strength on Monday and indications are that we may expect still further advances, especially on high grade butter. However, weaknesses develop very quickly on the market with prices as they are at present and one can not predict what the future may bring forth with any degree of certainty. There is an insufficient supply of unsalted butter and better grades of it are selling to exceptional advantage. The quoted differential in price of unsalted butter over corresponding grades of salted is two cents but certain high quality lots are bringing even more than that. Quotations on various grades of butter at the close today were as follows: Extras (92 score), 63½c; higher scoring than extras (93 score or better), 64@64½c; firsts (88 to 91 score), 58½@63c; and seconds (83 to 87 score), 55@ 58c.

There are considerable quantities of butter in the market which show marked metallic flavor. As metallic flavor is due to the dissolution of metalic particles in milk or cream, it is very essential that creamery patrons keep their cream cans as free from rust as possible as rust dissolves very readily in milk or cream and a metallic flavor is thereby transmitted to butter which is made from them. W. B. LIVERANCE.

Conservation Week—Dec. 1-7

To bring before the American people in a forcible manner the need for saving food and sharing it with the allies and liberated nations, the Food Administration has named December 1-7 as Conservation Week. Conservation is vital to the relief of stricken Europe. Our harvest season has come and gone and whatever food is exported must come from our surplus and from our savings, very largely the latter. Certain foods such as meats, fats, and dairy products, it is true, are produced throughout the year but even these depend largely on feeds and fodder, supplies of which are limited and cannot be replenished until another harvest.

The original pledge made by the Food Administration in behalf of the people of the United States was 17½ million tons of food to be shipped overseas by July 1, 1919. This amount of food is 50 per cent greater than last year. With Belgium and France liberated and millions in south central Europe clamoring for food, the United States is now undertaking to increase its exports from 17½ to 20 million tons. The Mediterranean Sea routes are now sufficiently safe for bringing wheat from India and Australia, hence our exports will consist largely of fats, meats, and feed. Feed is essential for milk production of which the stricken nations are in critical need.

Conservation week as planned will include a message from Mr. Hoover to the people through churches, fraternal bodies, clubs, schools, posters, window displays, and the press. An effort will be made to warn of the serious results abroad if we fail to heed the requests for continued conservation. Food, we are reminded, is the only effective weapon with which to combat famine still threatening hungry millions. And never has there been so great an opportunity for women and children as well as men to show their true spirit of democracy in sending relief by daily acts of food saving.

Conservation week is intended also to impress upon every one that stopping hostilities or even the ultimate signing of peace terms produces no extra food and that human lives will continue to be sacrificed unless food is saved in this country and properly distributed among those who have pitifully little or none.—U. S. FOOD ADMINISTRATION.

War Industries Board Lifts Bars on Building

The following is extracted from a circular issued by the Priorities Division, War Industries Board, November 12.

Construction projects falling within the following classifications are approved, and no permits or licenses will be required therefore:

All farm and ranch buildings, structures, or improvements.

The construction, maintenance, improvement, or development by federal, state, or municipal authorities of highways, roads, boulevards, bridges, streets, parks, and playgrounds.

The construction, extension, improvement, maintenance, or repair of any public utility including water supply systems, sewer systems, lig and power facilities, and street a interurban railways.

The construction, extension, repairs of all irrigation and dra age projects.

The construction, alterations, extensions of, or repairs or additi to, plants engaged principally in p ducing, milling, refining, preservi refrigerating, or storing foods feeds.

The construction of new or alterations or extensions of ex ing school houses, churches, hospit and federal, state, or municipal bu ings involving a cost not exceed $25,000.

The construction of new buildi not embraced in any of the forego classifications or repairs on buildi involving a cost not exceeding $10,

Buildings begun prior to Sept ber 3, 1918, where a substantial tion of the building has already constructed.

All limitations on the productio building materials, including cem are removed. The War Indust Board will, as far as practica assist industries in producing terials, fuel, transportation, and l to enable them to increase their o ations to normal limits as rapidl conditions may warrant.

Precedence must be given to activities as will tend to stimulate production of foods and feeds, of of natural gas, of oil, and its prod of textiles and clothing and of erals.

Green County Holstein Sa

Green County, Wisconsin, "Switzerland of America", is and been for years one of the fore dairy sections of this country. moreover a Holstein center, but very recently the Holstein bree of that section had done but litt advertise their cattle. A year they held their first consignment which was fairly successful. year on Oct. 30 and 31 a second was held with considerably bette sults.

Ninety-eight animals were sol $17,160 or an average of $176 Thirty-eight of them were bulls brought $5,175 and the 56 fe averaged $209. The highest p animal in the sale was a 30-lb. ling bull sired by a 3,659-lb. s King Segis Pontiac Alcartra. was consigned by Baltz Hoesley purchased by Frank Duncan, consin, for $480. The highest p female was a 5-year-old cow fro herd of Otto Zimmerli that wen $420.

These figures in themselves ar large. In fact they are low pared with many Holstein sales there are several things to be sidered in this connection. I first place this is but the second sale ever held in that county. sale itself included too many bulls of ordinary breeding and untested dams, as well as a many young heifers. Moreover, few of the females sold had an ords at all. It was, in short, a s good, growthy, registered Hol and as such was a success.

Eells, Hellen, and Shaw di selling with J. G. Voss in the Chris. Tochterman managed the

Although the average acrea sugar cane per farm outside of isiana is quite small, this crop generally grown in some of the ern states that the total acreag an entire state may be surpri large. In Georgia, for instance cane patch per farm is only two of an acre, according to an est by the Bureau of Crop Estimate yet the estimated total acreage state is 67,300.

Get Ready for the Tester

HOARD'S DAIRYMAN:—I am done th testing so far as I know and so at I write will not be a bid for con- niences for myself. But other men and possibly it will be women too— il be out to dairy farms for testing s winter and I want to tell of some ngs that are for the owner's and tester's good. I have been test- off and on for about 4 years and eel that I know what some farms k.

In the first place a tester lives in a t case. Part of the time his work ps him about 2 days at a place, ugh there are many 7- and 30-day ords made with one tester on the). When he comes to your house member that he can not carry per- als as he could if he traveled with runk and was going to stay for a v weeks. Make him at home instead making him feel as if he were mpany. Most dairymen do. A few n't.

As to the work he does, give him the t chance you can. This seems like ing everything for the tester and hing from him. However, you will be losing by this. Everything you to make the work easier and quick- is appreciated.

Have some certain place in the ry room or cellar of your house or the house itself for the tester to rk. Have enough shelf room so t he can keep his sample bottles re and have enough of the bottles he can save samples from two or ee milkings before making a test ecessary. When you milk a cow 3 4 times a day it is not necessary or e saving to test out every milking soon as the sample is taken. Give shelf room for the composite bot- s and his glassware and a place the case that carries his outfit so cats and dogs can't tip it over and sh a lot of expensive glassware. at will be to your advantage as l as his because a serious accident ht hold his work up for quite a nber of days while new glassware s coming to him.

hen have some place where he can p milk and water and do his hing of bottles. A sink is about handiest place and if you have a ry house or room you will be fixed this. I have had to do all this k on a few boards laid across the ling tank or on a plank in a cor- of the woodhouse and I know t hard work it is to do a job right. e a mixture of some sort for hing sample bottles and milk test les that will really clean. Wyan- te or something similar should be re the tester can find it. Provide e kind of a bottle or pitcher for sulphuric acid. Many dairymen ect it to be poured from a gallon , or something just as clumsy, into acid measure that the tester uses. any dairymen have sample bot- that are picked up around the n, such as ketchup bottles, olive les, and mason fruit jars. Some e no tops and some are cracked leaky. You get your samples at barn and while you turn around et another one the cat has her in a sample jar. If it has set a hour the top of the sample is e creamy and the test is not what hould be. There is nothing quite handy, as far as my experience , as the regular half pint milk les with paper caps. These bot- are easy to wash and wash right. y don't cost as much as you might k either.

is to the dairyman's interest to e heat where the tester works. columns must be kept warm if test is to be right. With a lack of water and a warm room to work here is a tendency to be a little k about temperatures and that ns a loss for the owner. Fat con- ts with cold just as lard does in a can after it cools. So avoid any chance of this as a little contraction may easily mean a tenth of a per cent or more. Hot water is worth while in getting the sample from the barn ready for the testing bottles if the weather is cool or cold. Enough cream will easily stick to the sides of the sample bottles to make quite a difference in the test. By setting the sample bottles in warm water for a few minutes this cream will not stick to the sides and you will get it in the test.

Ohio. EARL ROGERS.

Apple Blossom of Indian Creek

Apple Blossom of Indian Creek 32757, an eight-year-old Guernsey owned by H. P. Hamilton, Wisconsin, recently completed a record of 14,107.8 pounds milk and 702.57 pounds fat, carrying a calf 275 days of her testing period.

This record qualifies her to the title of champion cow in Class AA, and replaces Benton's Lady Chesterbrook of Ingleside 28672, whose record was exceeded by 11.88 pounds of butterfat.

The oldest daughter of Apple Blossom of Indian Creek 32757, Ruth of Two Rivers 54059, holds fourth place in the two and one-half-year-old division of the double letter class, with a record of 9,521.6 pounds of milk and 500.88 pounds fat. Another daughter, Mary Jane of Two Rivers 69068, freshened in August, when less than two years old, and is producing over thirty-five pounds of milk a day with ordinary feed and care. Diantha of Two Rivers 52328, another cow in the herd, recently qualified for second place in the three-and-one-half-year-old division of the double letter class with a record of 12,189.6 pounds of milk and 584.61 pounds of butterfat.

GUERNSEY COW, APPLE BLOSSOM OF INDIAN CREEK
Year's record: Milk, 14,107.8 lbs.; fat, 702.57 lbs.
OWNED BY H. P. HAMILTON, WISCONSIN

Apple Blossom of Indian Creek 32757 was sired by Imp. Royal Governor's Rodeo 11792, a grandson of Governor of the Chene 1297 P. S. Her dam was Alexia 3d 21852, a cow that never was tested for the Advanced Register.

She commenced her test on August 14, 1917, after dropping twin calves on August 13, and it was only nine days after finishing her test that she dropped another bull calf. In thirteen months and nine days, this cow produced three calves worth from $100 to $250 each. Her own value increased several hundred dollars through her successful test and she produced over 7,000 quarts of milk which sold at ten cents per quart.

Deducting liberally from the total of these earnings for care and maintenance a sum remains equal to the earning capacity of a salaried man of no mean ability. Since September 9, 1914, a little less than four years, this cow has given her owners three heifer calves and three bull calves.

The fine record made by this cow of local breeding with approximately no large Advanced Register records back of her for several generations, illustrates forcibly the inherent production qualities of the Guernsey breed.—AMERICAN GUERNSEY CATTLE CLUB.

Courses in Tractor Operation

The Wisconsin College of Agriculture will offer two courses in tractor operation and repair this winter. The first course begins December 2 and lasts for three weeks. The second course begins January 6 and lasts for four weeks.

Ten tractors have been secured from different manufacturers for demonstrational purposes. Each student will have plenty of time to run each tractor. There will also be work in repairing tractors as well as stationary gasoline engines.

The courses are intended for middle aged men for training in tractor operation to relieve the labor shortage on the farm. Last year 75 men, some of them 50 years old, took the course. For a circular outlining the courses in detail, write to E. R. Jones, Department of Agricultural Engineering, Madison, Wisconsin.

Dairy Cattle in Texas

HOARD'S DAIRYMAN:—Practically all of the larger systems of railway in Texas have joined with many banks and farmers in the movement to bring about an increase of the dairy industry of this state by purchasing on behalf of farmers registered dairy cows in northern states and creating nucleus of dairy herds along their respective lines. One of the latest of these shipments arrived in Texas a few days ago and the cows were distributed along the Missouri, Kansas, and Texas. The shipment consisted of 45 head of registered Holstein cows and heifers and five good grade cows.

In the distribution of the cattle over Texas, one carload of thirty heifers and two bulls went to Williamson County. It is said there is little activity in dairying there at present. Eleven head of the cows will go to Teague, four to Hillsboro, and two to Denison.

For one of the best cows, $425 was paid. The average price for the entire shipment was approximately $200. Bankers in Georgetown, Williamson County, are back of the move, considering dairy cattle an excellent investment. In the other counties, bankers also showed interest in the plan, but many individuals did not need the assistance of bankers in financing their investment.

"By placing these high grade and pure-bred cattle in the hands of intelligent farmers and dairymen it will not be long before Texas will be a factor in the dairy industry," said Mr. R. R. Walker, agricultural agent for the Missouri, Kansas, and Texas R. R. "Texas can become the greatest state in dairying on account of nearly ideal conditions but there are two predominating factors to be reckoned with before she can proceed rapidly, first elimination of the tick, and second, she must grow her own feedstuff. Further importations will be placed as soon as possible along the lines represented by the Industrial Department of the Missouri, Kansas, and Texas Railway as this department is active in encouraging better agriculture and more and better live stock. Some of the other roads have made importations previously and will secure more as early as possible."

Texas. W. D. HORNADAY.

Second Brattleboro Ayrshire Sale

The second annual sale of Ayrshire stock held under the auspices of the Pure-bred Live Stock Sales Co. Inc. of Vermont, was held in Brattleboro, Tuesday, November 12th; 46 head being consigned by Hunter Bros. of Ontario; Gilbert McMillan, Quebec; Wm. Gibson, Ontario; D. M. Henderson, Ohio; Wendover Farms, New Jersey; Weymouth Farms, Massachusetts; E. J. Fletcher, New Hampshire; Middlesex Meadows Farm, Massachusetts; Geo. H. Dunsmore, Vermont; and South Farm, Ohio.

The 46 head averaged $274. The highest price paid was $1,050 for the imported heifer, Auchenbainzie Lady Daisy Bell 46830, consigned by Peter B. Bradley, Weymouth Farms, Massachusetts, and purchased by Geo. W. Stockwell, Massachusetts. Miss Hughina, a two-year-old heifer consigned by Hunter Bros., Ontario, was purchased by Peter B. Bradley for $750. The same breeder secured another of the Hunter entries in Sturdy Jean, a five-year-old cow, for $670. Wendover's two entries averaged $425. D. M. Henderson, Ohio, H. A. Moses, Peter B. Bradley, Weymouth Farms, W. E. Brigham, L. H. Severance, and Geo. R. Wales, all of Massachusetts, were prominent purchasers.

The following animals were sold for over $300:

Geo. W. Stockwell, Massachusetts	
Auchenbainzie Lady Daisy Bell	$1,050
D. M. Henderson, Ohio	
Steel Kilbowie	$300
Imp. Lessnessock Dora	325
Auchenbrain Union Jack	300
Imp. Blackbyres Rosie 4th	350
W. Newton, Massachusetts	
Imp. Friendlesshead Missie 5th	$345
H. A. Moses, Massachusetts	
Ladas Nancy	$400
Spicy Violet of South Farm	350
Favorite Foxy of South Farm	400
Spicy Miss Lorne of South Farm	355
L. H. Severance, Massachusetts	
Midland's Finlayston's Sloth	$435
South Farm, Ohio	
Ryanogue White Silk	$410
Geo. Grant, Connecticut	
Spotty of the Pines	$325
Peter B. Bradley, Massachusetts	
Springburn Rose 2d	$400
Miss Hughina	750
Sturdy Jean	670
Wendover Farms, New Jersey	
Blink Bonnie of Elmshade	$400

The evening previous to the sale some forty Ayrshire breeders and friends enjoyed a social get together banquet in the Brooks House, Brattleboro. After a splendid dinner, Mr. Capmann of the Holstein Association on behalf of the Brattleboro Board of Trade, welcomed the breeders to the state and then called on Mr. L. E. Ortiz of Wendover Farms, New Jersey, to officiate as toastmaster of the evening. A number of breeders and friends were called upon and a social evening was spent.—J. G. WATSON, Secretary Ayrshire Breeders' Ass'n.

Stumps occupy valuable land; foster the growth of weeds, since in order to keep the land in their vicinity clean much hard labor is necessary; mar the appearance of otherwise smooth fields, and hence reduce the selling price of a farm; furnish shelter for harmful insects and animals; and prevent the efficient use of modern machinery.

EDITORIAL COMMENT

It is generally held by those well informed upon the agricultural conditions of the world that there is going to be a good demand for farm products of all kinds. There is some conflict of statements as to the amount of wheat in the world. Some hold that there are several hundred million bushels in Australia and others, that there are less than 150,000,000 bushels and that some of this will not be fit for human food. Some claim India has more than a hundred million bushels of wheat ready for export and others claim less than 50,000,000. It would seem there must be a reasonable supply of wheat in the world or the Food Administration would not have restored the white loaf so soon, for most people were quite contented with using 20% substitute.

It is certain that there is going to be a splendid demand for dairy products of all kinds. Effort is already being made to secure a greater amount of butter for Europe. The present prices of butter are more nearly in keeping with the advanced prices of other farm products than they have been since the war started and we believe this will be a factor in stimulating larger production in what is commonly termed the home dairies. Without doubt, the creamery patron will feed his cows and care for them better, thus increasing their production. It is not a difficult matter through liberal feeding and good care to increase the production of our herds at least 20%. Even if this is done, there will be no surplus of dairy products. We are advised that milk consumption in October was larger in some cities than at any other time in our history. It is our opinion that people are beginning to appreciate the importance and food value of dairy products. This, together with the world shortage, is going to make a splendid market for years to come.

BUY A BULL

No dairy farmer should hesitate now to purchase a pure-bred dairy bull. Improved blood has always been a splendid investment, but the world's shortage of dairy products and the increasing demand for good dairy cows makes the investment more inviting than ever. Hoover informs us there is a world shortage of fats and milk. The shortage of fats amounts to three billion pounds and it would require 1,500,000 cows, with a production of 200 lbs. of fat per cow a year, to produce that amount of fat.

There is no question but that the demand for improved cows, cows capable of producing 250 to 300 lbs. of fat in a year, will be in larger demand in the future than they ever have been in the past. Cow testing associations are increasing rapidly and these organizations are revealing to the farmer the fallacy of keeping poor cows. The farmer who is raising high grade cows will find a ready market for them and at good prices. Good grades now are selling for $150 to $225 apiece. Further, the grade herd is returning a larger profit at the pail. A farmer who has not purchased a pure-bred bull to head his herd is losing money and will never be in position to take advantage of a grade cow market. Nondescript cows will not sell within $50 to $100 of as much as the grade.

For an absolute sure investment and a large rate of interest, nothing can beat a pure-bred dairy bull.

FARMERS' WEEK

Those engaged in planning courses for Farmers' Week at our many colleges of agriculture this coming winter are already giving attention to this work. It is fully realized that we are to face new conditions in this country and that the course of study must be arranged to meet them. Some of the nations of Europe have been giving much serious consideration in laying plans for conducting their industries when peace is declared. As a nation, we have been very wasteful of both food and clothing. The world shortage of these materials has brought us a new conception of our duty and has led us to understand that to be saving is not miserly or unbecoming to an American citizen. Necessity is the most effective teacher. The world shortage of food and clothing makes it a necessity for us to save and to plan how we may make the best use of what this country produces and how we can produce more to relieve the suffering peoples of earth.

We are pleased to see the courses of study in our colleges of agriculture shape themselves to be helpful in alleviating the suffering in the world and it is our hope that the farmers and their sons and daughters will lay plans to attend the farmers' short courses this winter so that they may secure a deeper conception of the relationship of agriculture to the progress and comfort of the world.

BOY RESERVES

Considerable farm work was done last year by the Boy Reserves, an organization which includes boys from the ages of 16 to 20. The appeals made by government officials caused many boys in the cities to volunteer their services to the farmers of this country. Some of them had farm experience, others had some training in school, and others went as raw recruits.

On a whole, these boys did well and only a small percentage of them failed. It is estimated that 250,000 boys gave their help to the farmers last summer and it is the hope to increase this number at least 250,000 the coming year. The Director of the Boys' Working Reserve estimates that in Michigan alone 7,000,000 lbs. of sugar were added to the world's supply by the work of the Boys' Reserve, as the farmers of this state were unable to secure help and were contemplating plowing under their crop of sugar beets.

Systematic effort is being put forth to teach these boys some of the rudiments in agricultural practice, so they may be of more service to the farmer at the very beginning of next spring's work. These boys are not as capable as those raised on the farm, but we must commend their spirit of being willing to go to the farm when there was such need of labor. The very fact that a larger percentage of them made good indicates the sincerity of their purpose.

COST OF MARKETING

Recently a consumer desired some northern grown rutabagas and had a sackful shipped by express, a distance of about 250 miles. This consumer asked that the bill for the rutabagas be sent him and that they be forwarded by express collect. The rutabagas came with the express charges of $1.19. The producer wrote to the consumer as follows:

"You say it is embarrassing to you to receive those rutabagas for nothing and you want me to charge you for them, but how do you suppose I would size myself up if I were to send you a bill for 13c which is all the roots I sent you would bring on the market up here?"

The middleman is blamed for adding considerable expense to farm products and extremists advocate his elimination. This is not the solution of the marketing problem. There was no middleman in the transaction cited, but the consumer demanded an expensive way of marketing and bought the rutabagas a long distance from his home. Rutabagas could have been shipped the same distance by freight in carload lots which would not cost, wholesale, more than 75 cents per hundred or about that per sack. If a carload had been shipped by freight the consumer could have purchased them from a middleman for at least $1 per hundred and this would be 32 cents per hundred cheaper than it cost to get 100 lbs. direct from the farm to the consumer by express.

In considering what the consumer pays for his products and what the farmer receives we must consider the labor expended in getting the farm products to the consumer. We may well consider, too, the desirability of buying farm products produced near the home of the consumer. If a consumer in New York ordered his potatoes from a producer in Idaho the cost of delivering them would be far more than the producer would receive. It would not mean that the express or the freight charges were too high or that the persons handling the potatoes made too large a profit.

In this simple and unusual way of marketing rutabagas there is illustrated clearly and well a fact that must be considered in all marketing problems. The express charges were not excessive considering the sackful of rutabagas were sent over three different railroads and delivered to the consumer's home. It was a direct service from the producer to the consumer yet the producer received but 13 cents for which the consumer paid $1.32. The crux of the whole situation lies in the fact that the consumer demanded a large service and this he is doing in many instances. In attempting to solve our marketing problems and to secure a larger portion of the consumer's dollar for the producer we must bear this fact in mind.

NEIGHBORS GETTING TOGETHE

This in essence is the soul of the movement community betterment in the country and from radiates larger practical benefits to the individu better farm living conditions, and a better m hood and womanhood. When conceived on the ba of an "uplift", efforts to accomplish these ends v never succeed; but in Massachusetts they have sought to organize rural communities by a pre ranged plan, but they have gone out to learn the people themselves and then to aid them in self improvement by their own community. A several years of experience in being taught, Massachusetts College of Agriculture deems time right for publishing the results of its v along these lines and offering a plan of operat This it has done in a bulletin entitled, "Mobiliz the Rural Community", by E. L. Morgan.

"It ought to be stated just as strongly as po ble," says President Butterfield in his introduct to this bulletin, "that this work is not in the ture of an 'up-lift'. It is not even 'social' in narrower sense. It is simply a method of orga zation by which we seek to assist the town to br into co-operation all the agencies, individuals, institutions in the community, in order to get full measure of capacity of the town at work veloping the community, industrially, socially, in every other way. The work has fully as muc do with the so-called 'practical' or business pha of agricultural development as it has with other. Indeed, its principal achievements are in practical field. We believed from the beginn that the local community should be built up to fullest possibilities; that it should study its make its own plans for its highest developm gain the co-operation of all its people to carry this plan. This sort of organized effort we bel is the key to rural progress everywhere."

With this sort of an introduction one can on with assurance that he will not meet with maudlin sentimentalist who would go out into poor, ignorant country to "uplift" it out of its s and degradation. A movement conceived and moted as an uplift, even when the idea itself have value, is at once condemned as futile by e person well informed concerning farmers and riculture. The farmer is rightfully suspicious the self-appointed, smug custodian of his welf and his independence holds in righteous conte this kind of mendicant charity.

The bulletin fulfills its introduction, and scope is further explained in the further qu tion from President Butterfield's introductio follows:

"The 'community idea' is not a new concep This bulletin is simply the story of the facts an outline of the principles and advice that grown out of the experience of nine years of s and effort in applying the idea to the rural t of the state. This effort has been, however, merely an experiment. It has been also a de stration, because it has been a real success. W lieve that not only is the main idea sound, but the methods suggested are sound. Of course, must be adapted to various communities. No communities can work exactly in the same wa

What we particularly enjoy in this bulleti that the author keeps his feet on the ground, does not soar off into the misty heights and cl beyond the ken of his reader. The plan has ceeded in Massachusetts, which is its best re mendation.

Suggestions on Curing First Crop Alfa

I have had a very marked degree of succe growing alfalfa but have met with desperate ure in making good hay, especially with the cutting. My farm is located near the northern of the lower peninsula of Michigan and is tically surrounded by water. The atmosphe therefore cooler and more moist than in places are. The first cutting of alfalfa is alwa monster, and usually takes place in rather coo unsettled weather. The second cutting has in my experience exceeded one-half that of first and usually takes place in warm, dry wea

I have never yet had any trouble in harve the second cutting no matter how I go at it, b spite of all the scientific precautions and adv can apply, I have never yet been able to away the first cutting in a first class manne have both heard and read of so many diff methods of haying that there actually seems more methods than there are animals to ea hay. I have tried out both extremes with failu

In the summer of 1917 I cut the hay one then raked and cocked it the following after After all my hay was cocked, a wet spell s which lasted about two weeks. It was just enough during this time so we couldn't mana store any of it away. About one-third of this

s covered with hay caps, but hay caps simply de matters worse instead of better, as the hay ler the caps was quite moldy near the bottom ile the others were much less affected with mold. en the unsettled weather cleared away we ead this hay out thin so as to thoroughly dry ore storing. In spite of this, less than one-third hay was good hay—none first class, while one- d was so moldy, brittle, and brown as to make y a poor quality bedding.

ast summer I cut the hay one day, raked it in ner small windrows the next afternoon, and on following day I turned the windrows and then led it in, using the hay loader in loading. The ther last summer was the most favorable hay- weather I have ever seen. There was no rain at and during most of the nights there wasn't any to speak of on the ground. My hired man said t this was the nicest hay he had ever seen put barn and it surely appeared to be in a perfect dition for storing. As far as we could observe, hay didn't seem to heat very much, but in time eemed to lose considerable of its bright green r and to become somewhat dry and brittle on . A few days ago I made a cut through the cen- of the mow and found for a considerable dis- e from the center that the hay was quite brown ead of green in color. I am mailing you a sam- of this. Is very much of the feeding value of h hay lost? It doesn't seem to be either moldy ery dusty.

low what puzzles me is this: If a person can't e his hay in cocks without running at least a risk of it being more or less spoiled by rain, if it is stored away by some "hurry up" meth- it will to some extent spoil anyway, what is the thing to do?

have spent a great deal of thought on this sub- and have devised several schemes which I will lain for your approval or disapproval:

—In order to save labor and losses through rain gure on cutting my alfalfa on one day. The t day I will rake it in windrows, and on the owing day haul it from the field. Instead of ing this in the barn, I am thinking of fixing a stacking devise whereby I can make a long, n, and very narrow stack near the barn. In a stack the hay ought to cure very rapidly at the same time not be very badly affected by s. When this is properly cured I can use a fork to drag this into the mow, which would e very quick work of the job.

—Another method I have thought would be ctical is to haul about two loads into the mow, ling it off well. Then build a triangular tube zontally across the long way of the mow to in about 5 or 6 feet of each end. This tube can uilt of three long poles held apart at short in- als by short pieces of boards so that the tube measure about 3 feet on each side. After this been put in place, put the remainder of the hay op of this. As soon as sufficient hay has been ed away to warrant it, attach the blower of a ge cutter to this tube and force a constant cur- of air through the hay until it is dried. A ll gas engine ought to furnish sufficient power this purpose. It seems to me that this would be ry quick and efficient means of drying the hay use, as soon as the hay would commence to , the air current would be warmed and its ng power increased. What do you think of this od? Would there be any danger of spontane- combustion?

—Another method I have thought practical is ake vertical shafts through the mow for the to circulate through. My stable is underneath mow so it would be easy to arrange this. About many of these should be required for a mow y 30 feet?

any of the readers of your paper have had any al experience with my suggestions, I shall be too well pleased to read of their experiences in paper.

orthport, Mich. H. W.

part of the trouble in curing hay under hay may possibly be due to the fact that our in- er did not move the cocks of hay frequently and not take the opportunity of opening them up n the weather was propitious. Of course, one ot secure a good quality of hay when it is nec- ry to leave it in the field for as long as three s. However, we have known of cases where a fair quality of hay was secured when the cocks properly made and moved occasionally so as ot only provide against too great spoiling at ottom but also to avoid the smothering out of lfalfa underneath.

e sample of alfalfa hay which was sent us of excellent quality. Indeed, most feeders of prefer the brown alfalfa to the more fashion- pea green variety, the process of fermenta- or heat to which it has been subjected tending ake the hay more palatable and stock enjoy it more. Doubtless this hay has lost some of its ng value but it is quite possible that its in- ed palatability will more than offset this loss. ave seen no figures giving what the actual loss tal nutrients may be but we apprehend that, l for pound, the brown hay would contain as nutrients as the pea green hay and it may be quite possible that the digestibility of the hay has been somewhat increased by the process of fermentation through which it has passed.

The suggestion as to curing the hay in a long, narrow stack might work out all right but we see no special advantage in this. A better method of curing is to spread the hay over the entire barn floor and not use a cutting to fill up a single bay. This is the method followed by Mr. Michels of Wisconsin and he has found it very desirable. It is more than likely that the extra handling incident to drawing the hay into the barn would more than offset any possible saving which might occur in the stacking of the hay.

The system of admitting air to the hay so as to assist in curing has been tried out by several farmers in somewhat similar ways, but it has not been found either practical or desirable. In fact, it is held by many men that this system is more likely to cause spontaneous combustion and spoilage. Hay which is highly heated will not burn except as it may have sufficient air (oxygen) to make combustion possible. This is indicated by the fact that occasionally a mow of hay will show a quite large burned area in the center but the fire kills itself out through its failure to secure sufficient oxygen to burn. Indeed, there is some danger in opening up a mow that has commenced to heat as in this way the air gets to it and combustion may take place.

Judging from the sample sent us we would consider the handling of the crop this year as being very successful, and we know of no better methods than those used thus far. If other readers have succeeded with other methods we would be glad to publish their experience.

Ration for Cows and Calves

Please balance a ration of the following feeds: Oats, $.C9 per bu.; barley, $1.00 per bu.; gluten, $58 per ton; oil meal, $62; cottonseed meal, $64. I have good corn silage and mixed clover and timothy hay for roughage. Also a meal for calves as the prepared calf meal is quite expensive.

Franksville, Wis. W. H. T.

Feed each cow daily about 30 lbs. of corn silage and all the mixed clover and timothy hay she will consume without waste. A mixture consisting of 400 lbs. ground barley, 300 lbs. ground oats, and 100 lbs. gluten feed or oil meal would supplement the roughage very nicely. Feed about one pound of this mixture for each 3½ to 4 lbs. of milk produced.

For calves about six months of age feed the mixture we have suggested for the cows. For younger calves, a mixture of whole oats, corn, and bran would be very acceptable. The young calf will eat whole oats and corn and do better on them than when ground. After they reach six months of age or thereabouts, it is better to feed the meal to them ground. Also, give the older calves opportunity to eat corn silage and keep before them a liberal supply of hay. It is well to remember that a calf also needs a liberal supply of water and salt.

Apple Pomace as Fertilizer—Alfalfa on Sandy Soil

We have a cider mill located five miles from us which has an accumulation of six or eight years of apple pulp. What value has it as a fertilizer?

We want to raise alfalfa. Can we raise it on light sand?

Would you advise turning rye under for fertilizer?

Temperance, Mich R. H. C.

We have no information on the fertilizing value of apple pomace or are we advised as to what its effect upon the soil may be. We believe that material of this kind would scarcely pay the expense of hauling for five miles. According to analysis it is worth about one-third the value of stable manure, but possibly the accumulation of several years would contain less moisture and would, therefore, have a somewhat higher fertility content.

The turning under of green rye for fertilizer is not a highly profitable method of farm management and we would much rather prefer the use of some legume. Vetch seems to be particularly adapted to sandy soils and possibly it may give better results than some of the other legumes. Unless there is some special object in view, we apprehend that the better practice would be to harvest the rye as grain, relying on some other legume crop to supply the necessary green manure.

Alfalfa requires a fertile soil in order to make its best growth. It will do well in a long range of soils, from rather heavy clay to sandy loam, but we are somewhat inclined to doubt whether success will follow attempting to grow it upon very loose and sandy ground. For this kind of soil sweet clover or the common red clover will probably produce better results.

If somewhat further and complete information is desired on the growing of alfalfa we would suggest reading the booklet, "Alfalfa", which was prepared by L. F. Graber, Secretary of the Wisconsin Alfalfa Order. Our book department will be pleased to supply this upon receipt of its regular price, 70 cents.

Wisconsin Tubercular Laws

I would like to know what the law is in regard to cattle that react to the tuberculin test. What compensation is paid by the state, and how is the value of the animal set?

Clinton Junction, Wis. F. S. S.

The present Wisconsin laws provide that the owner of reacting cattle will receive no compensation unless he tests his entire herd or agrees to retest shortly after the reacting animal is discovered. The appraisal limit is now fixed at $200, and for each animal condemned the owner will be paid fifty per cent of the appraised value without regard to the nature or extent of the tubercular lesions. This is a vital change from the previous law under which compensation was based according to the extent of the disease in the animal and the appraisal limit was $100. In making the appraisal the value is fixed according to the condition in which the animal is found at the time of appraisal, but in no case is the appraisal to exceed $200.

In general practice the appraisal is made by a representative of the State Live Stock Sanitary Board and the owner of the animal. That is, if a certain animal has been found tubercular, the state veterinarian is notified and one of his staff agrees with the owner as to the proper appraisal value of the animal, and settlement is then made on the basis of one-half this value. Should there be any disagreement, then recourse may be had to the provision of the law which provides notice to a justice of peace who secures the aid of three competent men to make the appraisal, which shall be final. We are informed, however, that owners have seldom found it necessary to make this appeal and that the Live Stock Sanitary Board will be found thoroughly willing to co-operate where there is no attempt to exert undue or improper influence.

There is no provision in the present law which makes any distinction between pure-bred and grade cattle, but it is reasonable to expect that most pure-bred cattle will be appraised very close to the $200 limit, whereas grade cattle will vary according to the market conditions. It must also be remembered that no compensation is paid for condemned animals unless the entire herd is tested. This provision is to insure that tuberculosis will be eventually cleaned up in the various herds of the state.

Ration With Alfalfa and Silage

Please help me balance a ration for my Holstein cows. For roughage I have corn silage, with all the ears left on, alfalfa, oat straw, and corn fodder. I have bran, oil meal, oats, and corn.

Waupaca, Wis. O. P.

We would let each cow have daily about 30 lbs. of corn silage and all the alfalfa hay she would care to eat up clean, and give her some of the corn fodder to pick over, using what she leaves for bedding.

A mixture consisting of 400 lbs. ground corn, 200 lbs. ground oats, and 200 lbs. bran will supplement the hay and the silage nicely. To cows giving moderate flows of milk, that is, from 20 to 30 lbs., we would feed 1 pound of this mixture for each 4 lbs. of milk produced. To cows giving more than 30 lbs., it would be well to feed from one-half to one pound of oil meal. Cows giving less than 18 pounds of milk can do their work upon corn silage and alfalfa hay alone.

Width of Cow Stall

How far apart should the cows be fastened when tied with tie chains?

Hawk Point, Mo. B. M. W.

The width of a standard cow stall is 3½ feet and we see no reason for varying this when the cows are tied with chains. For smaller animals the width is occasionally cut down to less than this, but it is scarcely desirable to do so except for special stalls for young stock alone. Cows even in the same breed often vary considerably in size and it is more convenient to maintain the standard width of 3½ feet, which is sufficient for even the larger dairy cows.

Highest Yields of Jerseys

THE American Jersey Cattle Club reports that up to September 30, 1918, there was a total of 10[illegible]7 cows entered in the Jersey Record of Merit, or Advanced Registry as it is called by the other breeds. These cows averaged 7,876 lbs. milk containing [illegible] lbs. fat, with an average test of 5.36 per cent fat. There were 3,712 two-year-olds that averaged 6,598 lbs. milk containing 357 lbs. fat; 1,755 three-year-olds that averaged 7,585 lbs. milk containing 411 lbs. fat; 1,338 four-year-olds averaged 8,493 lbs. milk containing 460 lbs. fat; and 6,522 five-year-olds averaged 9,133 lbs. milk containing 483 lbs. fat.

The best ten two-year-old Jerseys averaged 11,991 lbs. milk containing 709 lbs. fat; the best ten 3-year-olds averaged 13,977 lbs. milk containing 809 lbs. fat; the best ten four-year-olds averaged 14,874 lbs. milk containing 869 lbs. fat; and the best ten five-year-olds averaged 16,269 lbs. milk containing 948 lbs. fat.

The best five records on September 30, 1918, in year's tests at various ages were as follows:

and H. R. Number of Cow	Milk Lbs.	Per cent of fat	Butterfat Lbs.
Class 1.—Cows Under Two Years			
[illegible]y Farce 298177	14,260.0	4.46	635.7
[illegible]s 64th of Hood Farm 266735	9,830.3	6.17	606.6

Waukesha Holsteins Sell Very Well

Last fall most of the buyers and spectators at the Waukesha County, Wisconsin, Holstein Breeders' Consignment Sale were not at all comfortable. The weather was cold and the salamanders used to heat the sale tent were productive of very much more smoke than heat. This year their sale pavilion, one of the best, was completed and helped to insure a successful sale.

The sale this year was one of good cattle and included some of the best that have been offered this fall in the middle west. More than that, a very large majority of the animals were in the best of sale shape so that there was every reason for a successful sale.

One hundred seventeen animals were sold for an average of $302, going to buyers from Minnesota, Nebraska, Illinois, and Wisconsin. John Winkler of Wisconsin was the heaviest buyer taking thirteen animals at an average price of $310, this in addition to being one of the two men who purchased the highest priced bull, mentioned below.

The largest consignment was from the Carnation Stock Farm. They sold 20 animals for $7,670, an average price of $383 per head.

Three animals sold for $1,000 or more and one of them, King Pontiac Boon Artis, a 30-lb., 2-year-old son of King of the Pontiacs, topped the sale at $2,700, the highest price ever paid for an animal at any Waukesha County Holstein Sale. The fact that he was a son of King of the Pontiacs and from a 30.43-lb. daughter of Artis DeKol Walker, was in itself enough to interest men on the lookout for a herd sire, and when such breeding was combined with splendid individuality, his sale at a good figure was assured. The bull was consigned by Mr. George Schuster and purchased by John Winkler and Fred Weifenbach, Wisconsin.

Another of the good bulls of the sale was Carnation Prince Elba, a 10-month-old calf consigned by the Carnation Stock Farm. He was a 31.35-lb. son of Beauty Pietertje Prince and was, moreover, an exceptionally good individual. He was purchased by the Norris Farm Camp, Wisconsin.

Pabst Korndyke Barnard, a 30.73-lb. son of Mr. Pabst's famous 38-lb. herd sire, Korndyke Segis Johanna, was the third of the high priced bulls in the sale. He was consigned by the Pabst Stock Farm and purchased by G. P. Hoesley, Wisconsin, for $1,450.

The highest priced female in the sale was a 5-year-old untested cow, a splendid individual, consigned by W. G. Wright and purchased by Robt. Winkler, Wisconsin, for $560.

Haeger, Mack, and Love did the selling with S. T. Wood in the box. W. L. Baird, Secretary of the Association, managed the sale.

Following is a complete list of all animals selling for $200 of more, prices, and buyers of the same:

Sommers Canning Co., Minnesota	
Ashburn Segis Canary Maid	$275
Brookline Johanna McKinley Beets	425
Flossy Ormsby of Sunny Brook	425
Colantha Johanna of Elmcourt	325
Ollie Peterson, Wisconsin	
Ashburn Segis Ormsby Aaggie	$200
Johanna Buckeye Queen	310
Elm Court Johanna Zipsy	315
David F. Evans, Wisconsin	
Ashburn Pontiac Ormsby Pearl	$260
Martin Holcomb, Wisconsin	
Ashburn Dora Hengerveld Ormsby	$230
Frank A. Lund, Wisconsin	
Ashburn Hengerveld Queen	$350
W. E. Bussewitz, Wisconsin	
Ashburn Dora Aaggie Ormsby	$500
J. V. Bopp, Wisconsin	
Ashburn Pontiac Ormsby Agnes	$240
Beta Hengerveld Colantha	405
Bonair Babe Ormsby	230
DeFreule Englewood Van Beers	315
Beauty Pietertje Lady Errant	235
Colantha Segis Constance	490
G. P. Hoesley, Wisconsin	
Pabst Korndyke Barnard	$1,450
Burke Bros., Wisconsin	
No. 12	$450
D. M. Hildebrand, Nebraska	
Beauty Pietertje Mamie Segis	$420
Goldie Cornucopia Hengerveld	435
G. E. Vincent, Wisconsin	
Carnation Segis Beauty	$400
P. Vander Ploeg and A. Asengo, Wisconsin	
Carnation Korndyke Ormsby	$335
John Winkler, Wisconsin	
Rosaline Ormsby	$250
Swartz White Head	205
Siempje Burke	510
Johanna Grace DeColantha	350
Madison Gladys 2d	300
Barbetta Hengerveld Segis	300
Bonair Beechwood Ormsby 3rd	400
Bonair Jessie Ormsby	265
Nellie Victor Idlewild 4th	305
Glenwood Jewel Pontiac	225
Kate Spray Johanna 4th	380
No. 32	200
Pasma Ormsby Pietertje	350
Prairie Glen Stock Farm, Illinois	
Lady Johanna McKinley Beets	$260
Flossmor Canary Aaggie 2d	325
Norris Farm Camp, Wisconsin	
Carnation Prince Elba	$1,600
Ira Gettleman, Wisconsin	
Beauty Pietertje Ormsby Wartena	$300
John Spitzer & Son, Wisconsin	
Jessie Homestead Mercedes	$265
Piebe Parthenea Ormsby	245
F. F. Poe, Wisconsin	
Segis Daisy Faliesin	$200
Baird Bros., Wisconsin	
Jessie Mutual Fobes	$200
Willard Porter, Wisconsin	
Elm Court Pontiac Ormsby	205
J. B. Harten, Wisconsin	
Prince Cana Pietertje Mason	$210
Wm. Koester, Wisconsin	
Princess Eva Pearl	$250
John Winkler and Fred Weifenbach, Wisconsin	
King Pontiac Boone Artis	$2,700
Roy Henderson, Wisconsin	
Johanna De Pauline Skylark	$240
Colantha De Paul 3d	215
Mrs. Anna Reiss & Sons, Wisconsin	
May Dinkje Van Beers	$300
DeFreule Pearl of the Dairy Joe	225
Millrant Bros., Wisconsin	
Bertie Piebe DeKol 2d	$280
Canary Homestead Cornucopia	315
H. K. Vose, Illinois	
De Freule Aaggie Cornucopia	$260
H. E. Dickinson, Wisconsin	
Pearl De Kol Piebe	$535
Howard Johanna De Kol Piebe	460
Taylor & Northey, Wisconsin	
Glenwood Texal Segis	$350
Dusky Fobes Ormsby	285
Bonair Pontiac Ormsby	245
George F. Comings, Wisconsin	
Bairdland Sir Creamelle Pershing	$275
George McDowell & Sons, Wisconsin	
Bairdland Sir Creamelle Champion	$250
Stewart Bros., Wisconsin	
Bairdland Hengerveld Walker	$335
M. C. Kronemann, Minnesota	
Bairdland Pontiac Polkadot	$540
Wm. Basting, Wisconsin	
Western Princess Daisy 4th	$280
A. G. Koch, Wisconsin	
Bonair Springvale Pet Ormsby	$290
Albert Steinke, Wisconsin	
Bonair Heinse Ormsby 2d	$350
Francis Hood, Wisconsin	
Bonair Martha Ormsby	$310
F. A. Buth, Wisconsin	
Diana Hengerveld Segis	$305
Minnie Duchess Skylark Ormsby	340
Robert Winkler, Wisconsin	
Christina Segis Hengerveld	$275
Christina Hengerveld Segis	300
Daisy Johanna Skylark Ormsby	625
Mutual Ormsby	560
Johanna Longfield Friend	300
R. W. Reed, Wisconsin	
Bessie DeKol Sarcastic	$300
Dr. E. W. Maechtle, Wisconsin	
Aaggie of Maple Lane 2d	$360
Miss Johanna Pledge 2d	410
Canary Homestead Cornucopia	315
Henry Paul, Wisconsin	
Nockdair King Superba Violet	$260
Dibble & Hall, Wisconsin	
Nockdair King Superba Midland	$340
Paul W. Gerritt, Wisconsin	
Madrigal Johanna Aaggie 2d	$200

Whipping Twenty Per Cent Cream

The new order of the United State Food Administrator limiting the richness of cream to 20% butterfa makes it necessary for our wome folks to revise some of their method of whipping cream.

Whether or not cream needs to b whipped is not the question which wish to discuss, but assuming tha many households and possibly restau rants and hotels may wish to us whipped cream, a few suggestions i regard to whipping cream testin 20% butterfat may be helpful.

It has been taught, and the teach ing has been founded on practical r sults, that there are at least thre factors that are important in whi ping cream. These are the richnes the age, and the temperature of t cream. A fourth point has in rece years contributed to the successf whipping of cream and this point h reduced somewhat the importance the other three. The fourth point an improvement in the applianc used for whipping cream.

The old fashioned wire globe whi ping device which was revolv around a vertical shaft by means of support which is held by one ha while the other is used to turn t crank, has been greatly improved.

Some of these new successful ute sils resemble a small turbine wat wheel and others are simply a f piece of tin punched full of ho which is revolved rapidly in a shall dish in which the cream is whipped.

By using these modern cream wh pers, I have today made some tri with whipping cream containing 2 fat. This cream was pasteurized holding it at a temperature of 150 for twenty minutes and then coo and then placed in cans which w set in a tank containing water 50°F. After this cream had stood this temperature of 50°F. for twe hours a portion of it was whipped four minutes by using one of modern cream whipping applian

Another trial with the same cre was made by warming it up to 70 and then whipping it. In this c the cream churned instead whipped. Churning was also noti when a cream testing 23% warmed up to 70°F. and t whipped.

This cream testing 20% was t held at 50°F. for a further perio 24 hours and whipped. The re obtained was a little more satis tory than that whipped after cream was only 20 hours old. A t portion of the same cream was another 24 hours, making it 68 h old after pasteurizing, and this 2 cream whipped in an entirely s factory way.

These trials demonstrated what been observed many times, that necessary to cool the cream as as the dish and the cream-whip appliance a sufficiently long tim an ice box or cold water to brin three of these adjuncts to the cr whipping process to a temperatu 50°F. or lower. By careful atte to these points it is possible to cream testing 20% fat even thou is only 24 hours old. The cream tained, however, is not quite so s factory as that made by whip 20% cream which is 48 to 60 h old.

The age of the cream helps in ing it whip provided the ageing i tained by holding it at a tempera of 50°F or lower.

LESS-MILK THE OLD WAY

Save time on watering cows Do away with tank heater bother

$20.00 Extra Per Cow

A recent investigation in 25 herds where milk records are kept disclosed the fact that James Drinking Cups increased the milk yield an average of 2½ lbs. per cow per day; saved $2.50 on labor and 49c on fuel per cow each winter—a total increased profit of more than $20 per cow during the winter. The drinking cup outfits cost less than $5.00 per cow on the average, showing a profit of 400%.

Lost a Hired Man?
—James Equipment—
Saves Barn Work

James MOR-MILK labor saving Barn Equipment makes the barn work easy. The light running James Carriers make chore time almost playtime, turning the disagreeable task that heretofore has been shirked by all the help, into a job that boys enjoy.

James Carriers pay a profit of 25 per cent or more a year.

James Scrapers make quick work of cleaning up cement floors; the James Stanchions keep the stalls clean, by lining up the cows at the rear, so that manure falls in the gutter and not on the standing platform; and the James Swinging Sure-stop saves time and trouble. The James Feed Truck or Feed Carrier saves much walking to and from feed rooms,—makes unnecessary the lifting of heavy baskets of feed.

James Drinking Cups

not only save time—cows have fresh water before them day and night—but they do away with the nuisance of tending bothersome tank heaters in blizzardy weather; save fuel expense; and make more milk.

Drinking cups earn 200% and more a year on their cost.

And so with other James Equipment—stalls, steel pens for cows, calves and bulls, ventilators, bull staffs, mangers, swinging cranes, and milk can carriers.

Free Book

The 320-page book "The Jamesway" tells all about these James inventions that save labor, increase milk yields, promote better cow health and prevent spread of disease, protect against dangerous bulls and make simpler the care of calves and sick cows. It explains the easy way of putting up carriers, erecting the stalls and pens, and attaching drinking cups. Skilled help is not required.

Barn Plan Service

It tells about the James barn plan service; the James barn experts who know what has been successful and what has not; what not to do as well as what to do in planning convenient, money saving barns. Their advice on barn planning, ventilation and other barn problems is free. No charge for floor plans.

Let James Equipment solve your labor problem. Send for the book—mail the coupon now—get full details how to cut barn work in half and make more milk.

THE SAMSON *(Model M)* **is a *quality* tractor.**

If interested write for descriptive circular and method of allotment and distribution.

PANY, Janesville, Wisconsin

Walworth County Holstein Sale

For the past year or two, Walworth Co., Wisconsin, breeders have held their consignment sales under canvas and an uncomfortable time the buyers had of it if the weather was bad, as it often was. This year, however, they succeeded in getting the management of their county fair to build a good judging pavilion which would at the same time serve as a sale pavilion and on Nov. 7 the first sale was held in the new building.

Eighty-four animals were sold for $13,785, an average of $164 with $370 the top price. The prices generally were low, which while it was both a disappointment and a loss to the consignors, was an excellent advertisement for the sale, since certainly every buyer should be a satisfied one.

Mack, Beaumont, and Wiswell did the selling with J. G. Voss, sale manager, in the box.

Following is a list of animals selling for $100 or more, prices, and buyers:

A. M. Schmidt, Illinois	
Kayewood Master Pontiac	$260
April Lady Fayne	215
Johanna Leland Girl	200
John M. Schmitt, Illinois	
Liand Colanthus	$210
Lady Rag Apple 2d	220
S. A. Hunt, Wisconsin	
Rollingdale Alcartra Boy	$250
W. E. Dane, Wisconsin	
Kayewood Princess Johanna	$350
Sommers Canning Co., Minnesota	
Kayewood Dora Johanna	$275
A. W. P. Pearl Perfection 2d	$335
John Voss, Wisconsin	
Canary Ormsby Mercedes 2d	$165
L. H. Gapen, Wisconsin	
Pinehurst Clothilde	$325
Superba Johanna Buckeye	200
Piebe Gem DeKol Beets 2d	215
Princess Johanna Walker Prilly	140
Rollingdale Model Homestead	160
Rollingdale Model Canary Ward	160
Ray Beers, Wisconsin	
K. S. P. Pearl	$340
Oak Lodge Walker Alma	370
No. 55	160
A. D. Cormic, Illinois	
Rollingdale Pontiac Beets	$190
Theo. Schindelmeier, Illinois	
Forisy Pietertje Johanna DeKol	$200
Minta Pearl DeKol	210
No. 46	105
W. H. Hill, Wisconsin	
Aaggie Mercedes Model Pearl	$255
Lady Jessie Gem Inka	225
Ellsdale Sarcastic Beauty	220
Hattie Carlotta Pontiac Artis	100
Minta Bessie DeKol	245
W. E. Gilbert, Wisconsin	
Rollingdale Johanna Beauty	$200
George P. Peck, Wisconsin	
Model Canary DeKol	$200
Happy Home Edith Ormsby 3d	145
J. S. Crites, Wisconsin	
Model Rose Johanna	$185
Edith Gem Beets 2d	145
J. H. Steffen, Wisconsin	
Miss Johanna Pet Pontiac	$140
Fred M. Turner, Illinois	
Happy Home Mildred Korndyke 2d	$200
F. A. Swoboda, Wisconsin	
Jessie Burke Ormsby	$100

Dodge County Insane Asylum, Wisconsin	
Aaggie Johanna Mercedes	$125
E. E. Potter, Wisconsin	
Rollingdale Homestead Battels	$120
Ganz Bros., Illinois	
Sir Longfield Johanna Lad	$190

VETERINARY

Advice is given free in this department. Inquires must be signed by the writer, and should pertain to veterinary Matters only. Where an immediate reply and prescription are desired by mail, the inquiry must be accompanied by a fee of one dollar. In every instance it will be necessary to give a full description of the symptoms present.

Depraved Appetite

I have sixteen head of cattle and the most of them chew sticks and bones or any kind of rubbish and there seems to be something they want that they are not getting. They have had all the salt they want and have been out on good pasture. They have clover pasture and will go right out of the clover and look around for something else and are losing flesh. They have been grained with barley and oats.

Mayville, Mich. R. W.

Feed oats and wheat bran and twice daily add one ounce of bicarbonate of soda. The cows crave some ingredient lacking in this feed. The above treatment often proves remedial. If it does not in these cases, mix bonemeal or precipitated phosphate of lime in the feed, starting with two teaspoonfuls daily twice and increasing the amount if found necessary.

Disinfectant—Barrenness

Would like your advice on following questions: What is the best disinfectant to be used for irrigating herd sire before and after service; also the best instrument to be used? What is the best treatment for barren cows?

Fort Smith, Ark. W. F. W.

It is common to use a one per cent solution of coal tar disinfectant, or similar solution of hypochlorite of soda, or a quarter per cent solution for the cleansing and disinfecting of the sheath and penis of the bull. A fountain springe and hard rubber nozzle serve for the purpose.

There is no certain remedy for barrenness as the causes are many and different, but it always is well to have a trained veterinarian massage the ovaries, by way of the rectum, two or three times at intervals of a week and he should also open the mouth of the womb if abnormally closed, or treat the womb if pus or mummified fetus is present.

Abnormal Milk

Please tell me why a cow appearing in good health should give milk that tastes salty. After the milk sets for a while it appears to be kind of watery and chalky. She has been tested for tuberculosis and found all right.

Stevensville, Mont. F. M.

Let a sample of milk from each quarter into a separate vessel to determine whether the abnormal milk is given by one quarter or all of them. Garget would be a likely cause, but sometimes such conditions in milk are not blamable to the cow but to bacteria in milk utensils that are imperfectly sterilized or to impure washing water, or to dust in the setting place. Write again if the trouble persists after you have more perfectly sterilized the utensils. If garget is present, treat according to directions often given here.

DAIRY MARKETS

PRINTING

Hoard's Dairyman Art Dept. designs your letter head free. Just tell us your breeds of stock. Book of 5,000 Farm, Ranch and Cottage names 25 cts. Ask for samples of letter heads, envelopes, shipping tags, cards, milk tickets, etc. Poor stationery is more of a damage than a help. Address HOARD'S DAIRYMAN, Art Dept., Fort Atkinson, Wis. 8-tf

Are You a Progressive, Humane, Twentieth Century Dairyman?

If so, you are not satisfied to have your cows suffering the discomforts of concrete to stand or to lie on. The bedding is wet part of the time and the concrete causes swollen knees, diseased hoofs, loss of quarters and generally saps the vitality of the animal.

You can avoid and overcome these losses of vitality by installing the *Standard Open Work Stable Floor* which is sanitary, comfortable, adjustable to length of animal and can be installed at a moderate cost. Write for particulars to the *Standard Open Work Stable Floor Co., Niles, O.*

(TESTIMONIAL)

The Standard Open Work Stable Floor Co., Niles, Ohio: This is to advise we are well pleased with the Standard Open Work Floor which is installed in our barn. It has cut down the amount of bedding required by 50% since the cows do not lie on concrete at all and are always clean, dry and comfortable.

We have some yearling heifers standing on these floors which have been adjusted to their lengths by removing a few blocks and they keep as clean as the cows. Anyone who has tried it knows how disagreeably dirty a young animal becomes when put in an ordinary cow stall.

Signed, BROWNWOOD FARMS, N. Bloomfield, Ohio.

231-Acre Farm For Sale

Situated 2½ miles from Binghamton, N. Y. (Pop. 60,000). The Prosperous, World-renowned Industrial City of the State. Farm fully equipped, Stock, Crops, Tools, Best in State. A money maker. Half-mile frontage. Main macadam State Highway. $10,000 cash, balance long term mortgage. I have other farms not so large, with and without stock. Write what you want.

JOHN PULS, - HARTFORD, WISCO

When Joseph Was Down In Eqypt

—he interpreted Pharaoh's dream and was made ruler over all the lands. Then, with unparalleled foresight, he began to fortify the country against the long famine he knew was sure to come.

You know the story—how he gathered up all the food in the seven plenteous years and how "all countries came into Egypt to Joseph for to buy corn."

But you have the advantage over Joseph. There were no silos in his day. He could store *only the grain*, but you—with a modern, up-to-date Kalamazoo Silo—can store the *complete* corn plant. Also oats, peas, pea-cannery waste, soy beans, clover (if mixed with corn) and sugar beet tops—thereby insuring a perpetual, year 'round pasture of sweet, succulent, palatable feed for your stock.

Kalamazoo

TILE and WOOD SILOS

"THE WORLD'S STANDARD"

are the result of over twenty-eight years study and experience in silo construction. They are absolutely right in design, material and workmanship, and will keep silage in *perfect* condition indefinitely.

Glazed Tile Silos

Made of such lasting materials that they truly can be said to last forever—without paint or repairs. The blocks are of special hollow-type design and are absolutely fire-proof, frost-proof, storm-proof, moisture-proof, decay-proof, acid-proof, and vermin-proof.

Wood Stave Silos

Quickly and easily erected. Shipped ready to be set up. Have simple, safe anchor system, continuous doors, galvanized steel door frames and many other *exclusive* Kalamazoo features.

Your choice of four famous time-defying woods.

Get Posted—NOW

The time to investigate the silo proposition is *before* you purchase. You can't afford to take chances with your silo money, so write today for our illustrated, descriptive catalog and price list. We offer *special inducements to early buyers* and *easy terms* for those who prefer to pay for the silo out of the profit it earns.

DEALERS—We want responsible representatives in every locality. Write for our special proposition to dealers and full particulars of our plan that actually gets the business.

HOARD'S DAIRYMAN JUNIORS

A DEPARTMENT FOR THE DAIRY FARM BOY

Two Common Fur Bearers

The Muskrat

One of the very commonest of fur bearing animals in this country is the muskrat, and if you do any trapping at all this winter, as many of you will, the muskrat is almost certain to be one of the animals you try for. They are found in almost all sections of our country as well as in southern Canada, and are especially numerous in the marshes of some of the Atlantic coast states.

The muskrat is a small animal, 13 to 16 inches from the tip of its nose to the base of its tail, with brown fur that shades into a gray, ashy color underneath. Although sometimes seen in the day time it is a nocturnal animal. Its food consists chiefly of grass, roots, grain, and vegetables with an occasional clam, particularly when other food is scarce, As a rule, you will find them living along sluggish streams and on marshy ponds where there is plenty of grass and flags, the roots of which form one of their chief foods.

CANADIAN PATTERN STRETCHING BOARDS—(From Science of Trapping Published by A. R. Harding, St. Louis.)

All of you have seen their dome shaped homes made of reeds and rushes held together with mud. The entrances to these dwellings are at the bottom, under water. In one, often live eight or ten muskrats. You can very often see dozens of these houses in a single marsh, but you seldom see one along a stream. The muskrats there live in holes in the banks, their entrances being under water.

As mentioned elsewhere, muskrat fur is not at its best until midwinter although those furs taken during the fall and early spring are salable, and if there is a small stream near your home, you may want to start your trapping at once. One of the most common ways of trapping these bank rats is to find their slides along the bank and set a trap at the foot of the slide, two or three inches under water. For this purpose and in fact for all your trapping of muskrats, minks, or skunks, No. 1 or 1½ steel traps will prove very satisfactory. These traps set under water need not be covered.

Still another good way is to find their holes in the bank and set a trap in the entrance, staking or fastening it in deep water.

In all of your trapping for muskrats, set the stake the full length of the trap chain out into deep water so the animal will drown, otherwise it is very likely to twist off the foot and escape.

In his book on the "Science of Trapping", E. Kreps gives the following method for trapping rats in a pond or slough where there are a large number of them: "Get a board about 12 inches wide and sixteen feet long and nail strips across it, arranging them in pairs just far enough apart to let a trap set between. A board of this size will hold six or eight traps. The traps may be stapled to the edge of the board and some small pieces of bait scattered the entire length. The traps should be covered with dirt or dead grass. Attach a rope to one end of the board and anchor it in the water where the muskrats are sure to find it."

So far we haven't mentioned trapping around the houses in the winter. One way of doing this is to cut a hole in the side of the house and set the trap inside, closing the hole again to prevent the regular entrance from freezing.

Corn, sweet apples, carrots, or parsnips make good muskrat bait.

The Skunk

There's another and very common fur bearing animal that you can profitably trap. There is an excellent demand for skunk skins these days, the market price for them is good, and the actual trapping of them need not prove unpleasant if you are fairly careful.
